During 2013, the Faculty of Health Sciences significantly grew its research enterprise while effecting change at the highest level with a new dean and a new deputy dean for research. They are custodians of a faculty that has placed UCT in 53rd position among "clinical, pre-clinical and health" universities globally in the 2013/2014 *Times Higher Education* World University Rankings.
The Faculty of Health Sciences makes a vital contribution to UCT’s research income. We signed 747 research contracts in 2013, valued at just under R558 million. This is a 42% increase from 2012 and represents 57% of the university’s income. The faculty receives income from a wide range of national and foreign funders, and it has been encouraging to witness the recent partnering of local medical research funders with major international bodies to support health sciences research in South Africa. The faculty’s research publication output also continued to grow. These publications arise from all our departments and the numerous research groups spread across them, many promoting interdisciplinarity through cross-departmental interaction. Twenty-four of these groupings are accredited by the University Research Committee (out of UCT’s total of 73), the most recent accreditations being the Lung Infection and Immunity Unit and the HIV Mental Health Research Unit. Eight of these are South African Medical Research Council (MRC) units, which, in alignment with MRC goals, focus increasingly on the health priorities of the country. The MRC also awarded four merit awards to UCT Health Sciences academics in 2013 (see p168).

These publications are not the only recent awards garnered by faculty academics. Professor Valerie Mizrahi, director of the Institute of Infectious Disease and Molecular Medicine (IDM), was awarded the prestigious Christophe Mérieux...
Prize in 2013 for infectious disease research in developing countries (see p168). Professor Tim Noakes, director of the UCT/MRC Research Unit for Exercise Science and Sports Medicine, received a Lifetime Achievement Award at the National Business Awards in acknowledgement of his expertise in the field of exercise research. Professor Brian Rayner, head of the Division of Nephrology/Hypertension, won the respected 2014 World Hypertension League Award for Notable Achievement in Hypertension, while Professor Karen Sliwa, director of the Hatter Institute for Cardiovascular Research, received the Paul Morawitz Award for her research into cardiovascular prevention, heart failure and the pathophysiology of cardiomyopathy (see p167).

Evidence that our researchers are continuing to perform at a high level is also apparent from the 2014 National Research Foundation (NRF) ratings. During this cycle, the faculty grew its NRF A-, B- and C-category ratings to yield a total of 109 rated researchers, which includes the 17 that are held by young researchers in the Y category. UCT increased its number of prestigious A ratings to 35, with health sciences receiving our 12th coveted A rating in Emeritus Professor Robin Wood, director of the Desmond Tutu HIV Centre (see p166).

The faculty was home to 119 postdoctoral research fellows during 2013, more than a third of UCT’s 318. This is an increase of 20 fellows from 2012, again reflecting the growth of the research portfolio in health sciences. Between them, our postdoctoral fellows received 188 fellowships, valued at over R22 million. A further reflection of UCT’s efforts to foster successful health researchers is the growth of its Emerging Researcher Programme. During 2013, 150 of the faculty’s academics participated in the programme, compared to six in the first year of the programme 10 years ago. This capacity-building initiative provides research development grants, workshops and mentoring to emerging researchers, strengthening their profiles and preparing them for future research leadership.

In 2013, the faculty was home to around 2 000 postgraduate students, roughly a quarter of UCT’s total. PhD candidates made up 360 of these, with 88 honours students and a large contingent of 1 243 master’s students. We also housed 38 occasional postgraduate students and 247 studying for postgraduate diplomas. The faculty is committed to fostering the growth of human research capacity and our postgraduate training is in keeping with national priorities, supporting the South African government’s target of 1 000 new PhD enrolments in health sciences by 2022. A total of 539 of our health sciences postgraduate students received, between them, 809 scholarships, to the value of R37 million. During two graduation ceremonies, we awarded 70 honours, 181 master’s and 53 PhD degrees, as well as 163 postgraduate diplomas, across a wide range of disciplines. This is the highest number of postgraduate degrees and diplomas ever awarded in one academic year by the faculty.

Participation in health research is also encouraged at the undergraduate level, where we hope to inspire students to contribute to knowledge generation and develop research skills. The annual Health Sciences Undergraduate Research Day again successfully engaged students in October 2013. One hundred undergraduate students from across the faculty took part. Twelve oral presentations were delivered, and 25 posters presented. These were selected for inclusion by a committee of senior staff members and subsequently judged by a panel of clinical science, basic science, health and rehabilitation and public health academics.

FOLLOWING THE SUCCESS OF THE PAST YEAR, AND THE INVIGORATION OF CHANGES IN LEADERSHIP AND NEW INITIATIVES, WE EXPECT OUR RESEARCH ENTERPRISE TO CONTINUE TO DELIVER BIGGER AND BETTER ADVANCES IN SCIENCE AND HEALTH.

Two exciting faculty initiatives that kicked off in 2013 are the Cancer Research Initiative and the UCT Clinical Research Centre (CRC). The aim of the Cancer Research Initiative is to promote translational cancer research by encouraging greater collaboration among basic, clinical, rehabilitative and public health researchers and building research capacity. Early work on the initiative has included conducting a cancer situational analysis, discussions with internal and external role players, cancer seminars and work towards development of a strategic plan. The CRC, on the other hand, aims to provide expertise and support for the design, development, management, analysis and publication of high-quality clinical trials and other studies. This will include support for activities such as project
Emeritus Professor Robin Wood, director of the Desmond Tutu HIV Research Centre at UCT, was awarded a National Research Foundation (NRF) A2-rating in the 2013 round of ratings, pegging him as a world leader in his field, and bringing the faculty’s tally of A-rated scientists to 12.

Professor Wood first came across “slim disease” as a doctor in Zambia in the early 1980s, before the human immunodeficiency virus (HIV) had been identified, or anyone knew that acquired immunodeficiency Syndrome (AIDS) was the result. He had no idea it would one day become a global pandemic – and that it would shape his career and research.

That body of work, nearly two decades of pioneering HIV/AIDS research, has earned the Oxford-trained specialist physician and infectious-disease expert many accolades and honours, culminating in his NRF A-rating.

Among his many achievements has been developing the first community HIV clinic in Gugulethu in 2002, which led to the development of national HIV protocols, implemented in 2004.

Professor Wood says he would like to turn his focus now towards tuberculosis (TB) and the very high rates of TB infection, particularly among South Africa’s children, as well as the intersection of TB and HIV. What has perhaps been lost in the HIV/AIDS landscape, he says, is that “TB is an unmitigated disaster. There is more TB in Cape Town than in Canada, the US, France and Germany put together. And it’s getting consistently worse. We need a new approach to understanding TB transmission.”

A second faculty funding initiative, funded by a Vice-Chancellor’s Strategic Award, was the Top Soft-funded Academic and Research Staff (SFARS) scheme. In this initiative, merit-based awards were offered to SFARS in recognition of the significant role played by this component of our staff. Applications were competitive, with review by an independent committee, and were judged in two categories. In the Associate Professor/Professor category, awards were given to Professor Linda-Gail Bekker (Desmond Tutu HIV Centre), Associate Professor Crick Lund (Department of Psychiatry and Mental Health), Associate Professor Helen McIlleron (Division of Clinical Pharmacology) and Associate Professor Landon Myer (School of Public Health and Family Medicine). In the Lecturer/Senior Lecturer category, these accolades were garnered by Dr Chris Colvin (School of Public Health and Family Medicine) and Associate Professor Thomas Scriba (South African Tuberculosis Vaccine Initiative).

A-RATING FOR HIV/AIDS PIONEER

As 2014 progresses, the Faculty of Health Sciences is actively working to support the rapid growth in its research activity and output with enabling infrastructure, administration and governance. We are conducting an analysis of the costs and benefits of research in the faculty to understand better the complex and inter-related sources of income and output so that these can best be supported in the future. We are also striving to broaden our funding base and engage with both local and international funders to understand how our mutual interest in health betterment can be realised optimally. Following the success of the past year, and the invigoration of changes in leadership and new initiatives, we expect our research enterprise to continue to deliver bigger and better advances in science and health.
SALT OF SUCCESS

Specialist nephrologist Professor Brian Rayner received an award from the World Hypertension League in 2014 for Notable Achievement in Hypertension, a prestigious international accolade that recognises his research in salt-sensitive hypertension.

“This gives new recognition to our unit and research work on the international stage,” said Professor Rayner, who is head of the Division of Nephrology/Hypertension in the Department of Medicine at UCT/Groote Schuur Hospital and president of the South African Hypertension Society.

A UCT alumnus, Professor Rayner is renowned for his ground-breaking work on the genetics underlying salt-sensitive hypertension in black and coloured South Africans. A unique gene – thought to have originated among the San people – has been linked to this. It makes these population groups more susceptible to strokes and heart disease, as they don’t excrete salt effectively.

RENOWED FOR HIS GROUND-BREAKING WORK ON THE GENETICS UNDERLYING SALT-SENSITIVE HYPERTENSION.

A clinician-scientist, Professor Rayner has been researching the mechanics of hypertension for the past 15 years. He received his PhD in December 2013.

TOP AWARD FOR HEART SPECIALIST

Professor Karen Sliwa, director of the Hatter Institute, received the prestigious Paul Morawitz Award in Germany in April 2013 for her exceptional research in cardiovascular prevention, heart failure and the pathophysiology of cardiomyopathy.

The annual award is the highest recognition for exceptional cardiovascular research for German-speaking countries (including Austria, Switzerland and Germany) and can be given to scientists, cardiologists, cardiothoracic surgeons or paediatric cardiologists.

Professor Sliwa trained as a physician in Berlin, Germany, and worked subsequently at the University of the Witwatersrand, where she was the director of the Soweto Cardiovascular Research Unit. In 2010, she was appointed professor of cardiovascular research and director of the Hatter Institute for Cardiovascular Research at UCT.

Professor Sliwa, an National Research Foundation (NRF) B2-rated researcher, is one of a rare breed of cardiologists in South Africa in that she is both clinically active and trained in fundamental molecular laboratory methods, combining laboratory and epidemiological skills. She has widely published in both local and international journals and books of various topics related to cardiovascular medicine.

She is skilled in applying basic research methods to clinical problems and then devising novel and appropriate therapy. A major example is her work on heart failure of previously unknown origin occurring in African women around the time of childbirth (post-partum cardiomyopathy). By studying a laboratory rodent model, she and Professor Denise Hilfiker-Kleiner from Hannover, Germany, established the molecular mechanism of the disease and devised a hormonal cure with bromocriptine.

The Hatter Institute falls within the Department of Medicine and is part of the Medical Research Council’s Inter-University Cape Heart Group, which comprises three groups from UCT and two from the University of Stellenbosch. The unit strives to facilitate national and international research collaborations to consolidate and expand existing efforts to combat the most serious cardiovascular threats to health, and to improve overall prosperity in the region.
**THE BAREFOOT FACTS**

A review published by UCT researchers from the MRC/UCT Research Unit for Exercise Science & Sports Medicine (ESSM) in the online *British Journal of Sports Medicine* in 2013, found a remarkable lack of evidence to support the benefits of barefoot running for injury prevention and performance.

According to lead author and master’s student Nicholas Tam, barefoot running has become a popular topic of interest. However, the UCT article debates the current scientific evidence for and against barefoot running. What is noted is that often injuries encountered when wearing shoes (usually occurring in the knee) may be exchanged for different types of injuries (stress fractures in and around the ankle).

“Those seeking a miracle cure for running-related injuries should note that barefoot running may not be the sole answer and that benefits of barefoot running may require an accommodation period and may not be immediate,” says Tam.

---

**MRC STARS**

UCT scientists featured prominently in the Medical Research Council’s (MRC) merit award ceremony in November 2013, with “the highest honour in medical research in the country” being conferred on four high-profile academics.

Pictured left, clockwise from top, are Emeritus Professor Eric Bateman, former director of the UCT Lung Institute, who received a lifetime achievement award in the form of the MRC’s platinum medal and Professor Keertan Dheda, head of the Division of Pulmonology, who was awarded a gold medal. Associate Professor Graeme Meintjes of the Department of Medicine and Professor Kelly Chibale, from the Department of Chemistry and director of the Drug Discovery and Development Centre (H3-D), based in the Institute of Infectious Disease and Molecular Medicine (IDM), were acknowledged with the MRC Young Scientist Award (silver medal).

---

**GRAND PRIX**

Professor Valerie Mizrahi, director of the Institute of Infectious Disease and Molecular Medicine (IDM), has been awarded the coveted Grand Prix Christophe Mérieux by the Institute de France in Paris for her tuberculosis (TB) research and her ability to mentor young researchers.

The €500,000 award (over R6 million), made by the Institute’s Academy of Sciences, is a highly prestigious international accolade and was presented to Professor Mizrahi at a ceremony in Paris on 5 June 2013.

Paying tribute to Professor Mizrahi’s research, Pascale Cossart, a member of the Academy of Sciences, said: “What characterises Valerie Mizrahi’s work is not only her excellent research on *Mycobacterium* TB and TB, but also her very active involvement in the TB community in South Africa, on the African continent, and internationally.”

The Academy of Sciences, which makes awards to the most meritorious scientists and promising research projects, also lauded Mizrahi for her special qualities in mentoring students, particularly those engaged in TB research.

Professor Mizrahi plans to use most of the prize money to hire senior researchers, who are able to bring new skills to the laboratory that she runs with IDM colleague Dr Digby Warner, particularly in chemical biology and bioinformatics. She also plans to purchase laboratory equipment to provide opportunities for students from the laboratory to travel abroad for specialised training.
DOCTORAL GRADUATIONS

D.H. AKENA (PSYCHIATRY AND MENTAL HEALTH)
Screening for depression among HIV-positive patients in a primary health care HIV setting in Uganda
Supervised by Professor D. Stein and Professor J. Joska

V. ALLEN (CLINICAL LABORATORY SCIENCES)
The development of a point-of-care diagnostic test for tuberculosis
Supervised by Professor M. Nicol and Dr L. Ah Tow

D.A. AUGER (HUMAN BIOLOGY)
3D cine DENSE MRI: ventricular segmentation and myocardial strain analysis
Supervised by Associate Professor E. Meintjes and Dr B.S. Spottswoode

R. BAATJIES (PUBLIC HEALTH AND FAMILY MEDICINE)
The study of occupational risk factors and interventions for baker’s allergy and asthma among supermarket bakery workers
Supervised by Professor M. Jeebhay, Professor D. Heederik and Dr T. Meijster

L.T. BELL (CLINICAL LABORATORY SCIENCES)
High throughput proteomic analysis of Mycobacterium tuberculosis associated Immune Reconstitution Inflammatory Syndrome (TB-IRIS)
Supervised by Professor J. Blackburn

F.G. BELTRAMI (HUMAN BIOLOGY)
Beyond the VO2max plateau: a new approach for measuring maximal oxygen uptake
Supervised by Professor T. Noakes and Professor P.D. Wagner

B.M. BEREZOWSKI (SURGERY)
The pathological outcomes related to symptomatic impacted third molars and follicles as found in a private practice in South Africa
Supervised by Professor D. Khan and Professor V. Phillips

S.R. BRUJUNS (SURGERY)
From anxiety to haemorrhage: describing the physiological effects that confound the prognostic inferences of vital signs in injury
Supervised by Professor L. Wallis and Dr H.R. Guly

N.C. BURNHAMs (PUBLIC HEALTH AND FAMILY MEDICINE)
The effectiveness of an evidence-based workplace substance abuse and substance-related HIV prevention programme within a service industry
Supervised by Professor L. London and Professor C. Parry

E. CHIGUTSA (MEDICINE)
Population pharmacokinetics and pharmacokinetic-pharmacodynamic modeling of antitubercular drugs
Supervised by Associate Professor H. McIlleron and Professor C. Kirkpatrick

N.S. DAMBUZA (MEDICINE)
Antimalarial activity and pharmacokinetic properties of new chemical entities
Supervised by Associate Professor P. Smith, Dr L. Wiesner and Professor K. Chibale

M.-A. DAVIES (PUBLIC HEALTH AND FAMILY MEDICINE)
Outcomes and effectiveness of antiretroviral therapy for HIV-infected children in South African treatment cohorts
Supervised by Associate Professor A. Boulle and Associate Professor B. Eley

A. DEFFUR (MEDICINE)
The transciptomic landscape of HIV-TB
Supervised by Associate Professor N. Mulder, Professor B. Mayosi and Professor R. Wilkinson

M.E. ENGEL (MEDICINE)
A study of determinants and prevalence of rheumatic heart disease in Cape Town
Supervised by Professor B. Mayosi

C. FROYD (HUMAN BIOLOGY)
Central and peripheral regulation of performance
Supervised by Professor T. Noakes and Professor G.Y. Millet

G.A. GABRIELS (MEDICINE)
The investigation and assessment of nutritional and traditional supplement products for content validity, contamination and adulteration
Supervised by Professor M. Lambert and Associate Professor P. Smith

A. GEVERS (PSYCHIATRY AND MENTAL HEALTH)
An exploration of the nature of contemporary adolescents’ intimate relationships
Supervised by Associate Professor C. Mathews and Professor R. Jewkes

L.K. GRACE (MEDICINE)
The relationship between Alzheimer’s disease, inflammation, the APOE genotype and neuronal integrity
Supervised by Associate Professor M. Combrinck and Professor L. Kellaway

A.R. HORN (PAEDIATRICS AND CHILD HEALTH)
Early prediction of hypoxic ischaemic encephalopathy in newborn infants in a resource-limited setting
Supervised by Professor G. Swingler, Associate Professor L. Myer and Professor N. Robertson
R. HURDAYAL (CLINICAL LABORATORY SCIENCES)
Deletion of IL-4 receptor alpha on dendritic cells renders BALB/c mice hypersusceptible to Leishmania major infection
Supervised by Professor F. Brombacher and Dr N. Nieuwenhuizen

J. JAYAKUMAR (CLINICAL LABORATORY SCIENCES)
The role of IL-4 receptor alpha in chronic allergic airway disease (AAD)
Supervised by Professor F. Brombacher and Dr N. Nieuwenhuizen

Y.T. JOFFE (HUMAN BIOLOGY)
Dietary fat modulates the relationship between polymorphisms in the TNFA and IL-6 genes, and obesity and serum lipid concentrations in black and white South African women
Supervised by Dr J. Goedecke, Professor M. Collins and Dr L. van der Merwe

E.L. KAMPIRA (CLINICAL LABORATORY SCIENCES)
Pharmacogenetics of stavudine: role of genetic variation in mitochondrial DNA and polymerase gamma among adult Malawian HIV/AIDS patients
Supervised by Associate Professor C. Dandara and Professor J. Kmwenda

B. KLEEMANN (HUMAN BIOLOGY)
St. John’s Wort photomedicine for melanoma
Supervised by Dr L. Davids

T.R. LINDSAY (HUMAN BIOLOGY)
Influences on the nonlinear dynamics of human running stride time series
Supervised by Professor T. Noakes and Professor S. McGregor

G.M. LONDON (MEDICINE)
Isolation, characterization and efficacy studies of RNA aptamers against HIV-1 subtype C envelope pseudotyped virus
Supervised by Dr M. Khati and Professor B. Mayosi

H. MAHOMED (PUBLIC HEALTH AND FAMILY MEDICINE)
The incidence of tuberculosis in adolescents in the context of proposed TB vaccine trials
Supervised by Professor R. Ehrlich and Professor G. Hussey

T.N.C. MANN (HUMAN BIOLOGY)
Post-exercise oxygen consumption and heart rate recovery as possible measures of the homeostatic stress of an exercise bout
Supervised by Professor M. Lambert and Dr R. Lamberts

G.T.M. MASHABELA (CLINICAL LABORATORY SCIENCES)
Characterization of a unique sulfoxide synthase found in pathogenic trypanosomes
Supervised by Associate Professor D. Gammon and Emeritus Associate Professor D.J. Steenkamp

M. MATEJCIC (CLINICAL LABORATORY SCIENCES)
Identification of genetic polymorphisms associated with oesophageal squamous cell carcinoma risk in South Africa
Supervised by Professor I. Parker

S. MOYO (PAEDIATRICS AND CHILD HEALTH)
Optimal tuberculosis case-finding methodologies for field trials of new tuberculosis vaccines in young children
Supervised by Professor G. Hussey and Associate Professor M. Hatherill

H.H. NDLOVU (CLINICAL LABORATORY SCIENCES)
Investigating the role of CD28 costimulation and IL-4/IL-13 responsive myeloid and lymphoid cells during helminth infections in mice
Supervised by Professor F. Brombacher and Dr W. Horsnell

A. NOFEMELA (CLINICAL LABORATORY SCIENCES)
Characterization of genotypic and phenotypic properties of transmitted human immunodeficiency virus type 1 variants circulating in Mbeya Tanzania
Supervised by Professor C. Williamson and Dr Z. Woodman

D.B. OJJI (MEDICINE)
Biomarkers of ventricular remodelling in African hypertensives
Supervised by Professor K. Sliwa-Hahnle and Associate Professor S. LeCour

R.E. PARKER (PSYCHIATRY AND MENTAL HEALTH)
Pain in HIV/AIDS: characteristics, contributing factors and the effects of a six-week peer-led exercise and education intervention
Supervised by Professor D. Stein and Professor J. Jelsma

N. PEER (MEDICINE)
Cardiovascular disease risk factors in the urban black population of Cape Town
Supervised by Professor N. Levitt and Professor K. Steyn

J.P. PERES (HUMAN BIOLOGY)
The role and regulation of the T-box transcription factor, TBX3, in melanoma progression
Supervised by Associate Professor S. Prince and Dr S. Mowla
J.G. PETER (MEDICINE)
Approaches to the diagnosis of smear-negative and sputum scarce TB in South Africa
Supervised by Professor K. Dheda

N. PETON (CLINICAL LABORATORY SCIENCES)
Development of an Activity-Based Protein Profiling (ABPP) array-based platform for quantitative analysis of kinase inhibitor selectivity
Supervised by Professor J. Blackburn

J.D. PILLAY (HUMAN BIOLOGY)
Steps that count! The use of pedometry for physical activity and health promotion in South Africa
Supervised by Professor V. Lambert and Dr T. Kolbeck-Alexander

P.J. RANDALL (CLINICAL LABORATORY SCIENCES)
Neurons are new host cells for Mycobacterium tuberculosis
Supervised by Associate Professor M. Jacobs, Dr N.J. Hsu and Professor L.A. Kellaway

B.L. RAYNER (MEDICINE)
Investigation of the ethnic differences and genetics of salt sensitivity and salt sensitive hypertension in South Africa
Supervised by Professor R. Ramesar

R. SARKAR (CLINICAL LABORATORY SCIENCES)
The innate immune response to mycobacterium tuberculosis is dependent on strain lineage and on the host population
Supervised by Professor M. Nicol and Professor R.J. Wilkinson

C.J. SAUNDERS (HUMAN BIOLOGY)
Extracellular matrix gene sequence variant analyses and Achilles tendinopathy
Supervised by Professor M. Collins and Dr A.V. September

S.-K. SHARP (SURGERY)
The in vivo characterisation of a C-domain specific ACE inhibitor
Supervised by Dr N. Davies, Professor E. Sturrock and Associate Professor T. Franz

L.C. SMITH (CLINICAL LABORATORY SCIENCES)
The role of CD4+T cells in host protective responses against cutaneous leishmaniasis using genome-wide transcriptomics
Supervised by Professor F. Brombacher and Dr A. Schwegmann

E.A. STERN (PUBLIC HEALTH AND FAMILY MEDICINE)
Reappraising men’s sexual behaviours and gendered attitudes from the sexual-history narratives of South African men and women in a time of HIV/AIDS
Supervised by Associate Professor D. Cooper and Professor R. Buikema

A.O. TIAMIYU (NEÉ INYANG) (HUMAN BIOLOGY)
Design and evaluation of a novel meniscal prosthesis for the knee
Supervised by Professor K. Vaughan

V. TIMMERMAN (MEDICINE)
The effect of antiretroviral treatment on HIV associated tuberculosis incidence and outcomes in the Free State Province, South Africa
Supervised by Dr L. Fairall and Professor M.O. Bachmann

J.J. VAN DER WATT (MEDICINE)
HIV- associated sensory neuropathy in an African cohort; a longitudinal study of risk factors predisposing to antiretroviral induced painful neuropathy
Supervised by Associate Professor J.M. Heckman, Professor R. Wilkinson and Professor C. Dandara

A. VIRA (CLINICAL LABORATORY SCIENCES)
Role of M3 muscarinic receptor in regulation of immunity to infectious pathogens
Supervised by Professor F. Brombacher and Dr W. Horsnell

S.M. WANSLEBEN (HUMAN BIOLOGY)
The role of the transcription factor TBX2 in breast cancer and melanoma and its regulation in the UV-induced DNA damage pathway
Supervised by Associate Professor S. Prince

DEPARTMENT OF ANAESTHESIA

Head of Department: Professor JLC Swanevelder

Second Chair: Professor RA Dyer

Departmental Profile

Clinical research:

The Professor and Head of Department of Anaesthesia, Justiaan LC Swanevelder, has signaled a new era of cardiovascular research in the Department. Professor Swanevelder is an international expert in the field of Transoesophageal (TOE) and Transthoracic (TTE) Echocardiography, and has played a central role in the development of this field, and formal guidelines for practice and accreditation in the United Kingdom. He is a prominent member of the European Association of Cardio-thoracic Anaesthesia (EACTA). His initial contribution has involved a paper on a suggested time course for accreditation in South Africa, as well as several case reports and an editorial on the subject. Several important collaborations have been established during 2013, and research initiatives established, involving teaching and research on TTE and TOE by visiting experts (Professors E Sloth, Denmark, A Dennis, Australia and J Ender, Leipzig), with a view to training and studies in both intraoperative and point of care echocardiography. Numerous courses have been conducted on various aspects of medical ultrasound, and considerable outreach has involved Universities around the country. An HREC approved study will shortly be conducted on the value of ultrasound in medical student volunteers. Professor Swanevelder has also established a new laboratory research post. The first incumbent, Dr Nkanyiso Hadebe, is involved in his PhD project on cardiac pre-conditioning, which has a laboratory and a clinical component. He is collaborating with Professor S Lecour and Karen Slwa in the Hatter Institute of Cardiovascular Research.

The Red Cross Hospital operating theatre complex continued to create an environment conducive to research, and this was evidenced by the publication of several instructive case reports, and several MMed dissertations. These include a completed pharmacokinetic study of the antimicrobial agent cefazolin during cardiopulmonary bypass. The Department of Pharmacology has developed an assay for cefazolin, which should facilitate several further important clinical trials. Important projects in thromboelastography (TEG) are ongoing, and Dr Owen Hodges is in the process of writing up his PhD on the use of TEG during burns surgery. Valuable guidelines have been published for pain management and sedation in children. A further study on the noninvasive measurement of haemoglobin in paediatrics, is nearly complete.

Obstetric Anaesthesia remains an important area of investigation. Ongoing projects involve spinal anaesthesia in preeclamptic parturients. As part of this investigation, collaboration was initiated with the Department of Anaesthesia of the University of Washington. This aspect of the study will examine the population characteristics of the adrenaline β2-haplotype in preeclamptic women. Two MMed mini-dissertations are in progress in this regard. An abstract was presented on stroke volume responsiveness in preeclampsia at the Obstetric Anaesthetists’ Association Annual Meeting in Bournemouth in May 2013. During the visit of Professor AT Dennis, from the University of Melbourne, data was collected on transthoracic echocardiography in pregnant women. Four abstracts will be presented at the Obstetric Anaesthetists’ Association and Society of Obstetric Anaesthetists and Perinatology meetings in May 2014, including findings in patients with severe preeclampsia, and HIV positive women. The latter project is the subject of an MMed dissertation. During a further visit from Professor C Ortner from Seattle, a study was performed on acid base balance in preeclampsia; the data served as the basis for a further MMed dissertation. The leader of this research group, Professor RA Dyer, has been B-2 NRF rated, on the basis of completed research in the period of review from 2004-2011.

The Department is an active research site for the international, multicentre POISE-2 trial of aspirin and clonidine for perioperative protection of high risk patients against perioperative myocardial events, and has recruited the second highest number of patients in South Africa. The South African principal investigator is Professor B Biccard, from the Department of Anaesthesia, UKZN. The local site was initially set up by Prof M James. The lead author is Dr A Myburgh, with Dr O Porrill as co-investigator in 2013.

Airway research:

2013 saw considerable advances in the Difficult Airway Facility, under the leadership of Dr R Hofmeyr. Dr D Wilson, of Guy's Hospital in London, collaborated with...
our Difficult Airway research group, and conducted original clinical research on the newly devised supraglottic device, the 3gLM, and in addition devised a laboratory vomiting model using cadavers, in order to compare the function of various supraglottic airways with respect to protection against passive regurgitation and active vomiting. This work is to be presented at the SASA 2014 Congress.

Fluid research:
After the withdrawal of the hydroxyethyl starches as perioperative resuscitation fluids following recent well-publicized research papers, the Department became involved in an advisory capacity in composing an evidence-based letter, in conjunction with other SA universities, recommending the reinstatement of the HES 130.4 solution for perioperative use. This was successful. There is ongoing research with the University College Hospital in London in connection with the identification of the ideal crystalloid anion.

Critical Care:
In the field of septic shock, two projects are in progress. The first involves high dose Vitamin C in the management of haemodynamic failure, and the second relates to markers of oxidative stress in this condition. Part of the latter theme has already been presented at the World Congress of Critical Care, and won an award. In the interests of improved quality assurance, an MMed project has addressed the important issue of ICU handoffs. This has improved patient care and will be the subject of two publications. A further study on semi-closed loop control of blood glucose is planned after a pilot study in 2013. An international collaborative study is in progress on the attitudes of physicians to the withdrawal of therapy.

Laboratory Research:
The Department was involved in several areas of research in 2013. There are ongoing studies on coagulation, and an animal study of coagulation in a porcine model of acute liver failure, in collaboration with University College London. Further ongoing studies include the use of TEG to examine coagulation in HIV parturients, and in patients undergoing renal biopsy. The acquisition of the thromboelastometry device (ROTEM), will allow for more accurate diagnosis of causes of coagulation abnormalities. Lizel Immelman, our senior medical technologist, has been appointed to a permanent post and is performing an important research administrative role over and above her role in teaching and individual projects. She plays an important role in teaching of the coagulation process and instruction on the use and utility of TEG and ROTEM devices, which are based on viscoelastic changes during the clotting process.

Our Department is also collaborating with the Department of Cardiothoracic Surgery and Strait Access Technologies, and supporting innovative cardiovascular research on new heart valve procedures in animal models in the Christiaan Barnard Building.

The Department is co-supervising Mauritz van den Berg for his Master’s Degree research on new muscle relaxants, magnesium and a novel reversal agent (Sugammadex) in a rat model, in collaboration with Emeritus Professor Laurie Kellaway of the Department of Human Biology.

Collaboration:
Once again, junior consultants and registrars were encouraged to participate in research activities wherever possible, and scientific writing skills were also improved in this way.

Interdisciplinary collaboration at UCT is strong, and includes the Departments of Cardiothoracic Surgery, Obstetrics and Gynaecology, Neonatology, Paediatrics, Critical Care, the Hatter Institute of Cardiovascular Research, and the partly UCT- owned Strait Access Technologies (Biomedical Engineering).

National collaboration has been strengthened, in particular with UKZN, where a study has been planned on biomarkers and echocardiography in patients with severe preeclampsia. A systematic review of the available evidence in this regard, was published in collaboration with UKZN.

International collaboration continues, and is constantly expanding. The Department collaborates with the University of Aarhus, Denmark, the University of Melbourne, the University College London Hospitals, the University of Leipzig, the University of Toronto, Stanford University, Rikshospitalet in Oslo, the University of Washington, and Glenfield Hospital/University Hospitals Leicester. In the field of echocardiography, important collaborations have been established with Professors E Sloth (Denmark), A Dennis (Australia), J Ender (Leipzig) and Andrew Roscoe (Toronto). In thoracic surgery, Professor Peter Slinger of Toronto is a world leader and collaborator with the Department. In the area of the difficult airway, new ties have been established with Dr D Miller of Guy’s and St Thomas’ Hospital in London, and Dr Ellen O’Sullivan (President of the Irish College of Anaesthetists) of Dublin. Ongoing laboratory collaboration continues with Dr Monty Mythen of UCLH.

Research Fields and Staff

SWANEVELDER, JLC.
The value of transoesophageal and transthoracic echocardiography on cardiovascular patients in the perioperative period (see above); introducing TTE into undergraduate medical training and curriculum. Laboratory work: muscle relaxants and reversal agents, intralipid and myocardial pre-conditioning.

HADEBE N, SWANEVELDER J.
Cardiac pre-conditioning.

VAN DEN BERG M, JAMES M, SWANEVELDER J.
New muscle relaxants, magnesium and novel reversal agent, Sugammadex.

MILLER M, JAMES MF, IMMELMAN L.
Coagulation studies using thromboelastography and thromboelastometry.

JOUBERT IA, PIERCY J, MILLER M.
Septic shock, ICU Quality Assurance, liver failure model.

DYER RA, VAN DYK D, REED AR, ARCACHE M, VORSTER A, K TIMMERMAN, M RADEMEYER, SWANEVELDER J.
Obstetric anaesthesia:
Cardiac output studies during spinal anaesthesia in patients with preeclampsia; effects of fluid loading and vasopressors; the genetics of preeclampsia; effects of vasopressors on cord gases; spinal anaesthesia in the obese parturient; transoesophageal and transthoracic echocardiography.

THOMAS J.
Management of burns in children; pain management in children; Case reports; Fluid management in children; Noninvasive haemoglobin measurement; Pharmacokinetics of antimicrobial agents during cardiopulmonary bypass; Paediatric burns: Coagulation studies; Evaluation of the need for psychosocial services for paediatric burn patients at the RCWMCH.

HODGES O, THOMAS J.
Coagulation in patients with paediatric burns.

SWANEVELDER J, MYBURGH A, NEJTHARDT M, ROODT F, CLOETE E.
Transoesophageal echocardiography in cardiac anaesthesia; Point of care TTE; Medical student education in ultrasound.

MYBURGH A, JAMES MF.
POISE-2 trial

LLEWELLYN R.
Drug errors in anaesthesia.

ROODT F, DE VAAL A, HOFMEYR R.
Airway research.

DEPARTMENT OF CLINICAL LABORATORY SCIENCES

DIVISION OF ANATOMICAL PATHOLOGY

Head of Division: Professor Dhiren Govender

The Division of Anatomical Pathology has both diagnostic and academic components. The diagnostic laboratories form part of the National Health Laboratory Service (NHLS) complex at Groote Schuur (GSH) and Red Cross War Memorial Children’s (RCWMCH) hospitals. The Diagnostic laboratories are at both sites and provide a diagnostic histopathology, cytopathology and autopsy services to GSH and RCWMCH, the academic hospital complex and associated hospitals and clinics in the Western Cape. The division also serves as a public and private tertiary referral and consultation centre for Anatomical Pathology.

These service commitments drive most of the research programmes that are patient and disease orientated. The Research laboratory had 1 PhD, 4 MSc (2 graduated in 2013), 15 MMed students and 1 elective student during the reporting period. Two additional PhD students registered during 2013. The Division has been involved in a range of research activities using a variety of techniques and continues to broaden its research base. The main research focus is in the field of molecular pathology pertaining to diseases that are common in South Africa and the Western Cape – these include various cancers, in particular those affecting disadvantaged population groups. The major research focus since the establishment of the divisional research laboratory has been breast cancer, gastrointestinal cancer and lymphoma. Cancer research includes studies related to the use of matrix-assisted laser desorption/ionization time of flight mass spectrometry (MALDI-TOF-MS) to identify proteins and peptides in formalin fixed paraffin embedded cancer tissue. In addition, we are also investigating the use of MALDI imaging mass spectrometry to identify proteomic patterns and their distribution directly in tissue. Other research areas include tuberculosis, cardiomyopathy and foetal-alcohol syndrome.

The Division successfully presented the Young Pathologist seminar at the Laboratory Medicine Congress held at the Cape Town International Convention Centre in July 2013. Divisional staff were part of the organising committee for this Congress.

Collaborative Research

The Division has active collaborations internationally with the United States and continues to establish collaborations with other Academic Pathology departments in Africa. We have an established joint breast cancer research project with the Aga Khan University in Nairobi, jointly funded by the NRF and Kenya. We are exploring similar collaborations with the Pathology department at the Muhimbili University of Health and Allied Sciences in Dar es Salaam. A joint project with the University of Botswana was established in 2013 and a student from Botswana is registered for a PhD in the Division.

There are internal collaborations with the departments of Surgery, Medicine, Cardiology, Obstetrics and Gynaecology, Radiation Oncology, Human Biology, Human Genetics, Forensic Medicine and Medical Biochemistry.

Research fields and staff

PROFESSOR DHIRENDRA GOVENDER
Pathobiology of cancers, especially breast cancer, gastrointestinal tract cancers and lymphoma.

A/PROFESSOR RICHARD NAIDOO
Molecular pathology and biomarkers in cancer.

A/PROFESSOR HELEN WAINWRIGHT
Foetal, perinatal & neonatal pathology, placental pathology, respiratory pathology including TB, cardiac pathology including cardiomyopathy and liver disease.

DR MAUREEN DUFFIELD
Neuropathology, renal pathology and electron microscopy.

DR MICHAEL LOCKETZ
Gastrointestinal tract pathology.

DR SHUJMANI MALAKA
Breast, gynaecological and thyroid gland pathology.

DR KOMALA PILLAY
Paediatric pathology, lymphoma and fine needle aspiration cytology.

DR RAVEENDRA SOOKHAYI
Lymphoma and Soft tissue sarcoma

DR HUE-TSI WU
Gynaecological pathology

DIVISION OF CHEMICAL PATHOLOGY
(Including the Chemical Pathology sections of Groote Schuur Hospital and Red Cross War Memorial Children’s Hospital)

Head of Division: Professor David Marais

Divisional Profile

The Division of Chemical Pathology comprises both academic and diagnostic sections. The academic section is located in the Faculty of Health Sciences and the diagnostic laboratories are based in NHLS core laboratories at Groote Schuur Hospital and Red Cross Children’s Hospital. These laboratories offer a diagnostic service to both adult and paediatric patients attending the Groote Schuur and Red Cross Children’s Hospitals. Members of staff participate in ward rounds and clinical meetings, especially with the Division of Endocrinology, Porphyria service and the Lipid Clinic. The Division has a strong interest in the investigation of metabolic disorders, of inherited or acquired nature; with an historical tradition of basic science research. Teaching includes undergraduate (MBChB) and postgraduate courses (MMed, MSc and PhD). The Division also contributes to the teaching in the Division of Medical Biochemistry, Human Biology and Department of Molecular Cell Biology in the Faculty of Science.

Recent research activities covered the molecular genetics of inherited metabolic disorders, and mitochondrial myopathies. The division now also researches dyslipoproteinaemias and disorders of lipid metabolism at a biochemical and genetic level. Individual researchers have established international collaborations. There is also interaction with the University of Stellenbosch division of chemical pathology. The Division hosted supernumerary staff from neighbouring SADC countries (Malawi, Nigeria, Zambia) for the purpose of postgraduate training as it is regarded as one of the premier Chemical Pathology academic units in Africa. Training courses in laboratory methods and laboratory management have been offered. The active academic programme includes CPD-accredited weekly journal clubs, seminars and clinical ‘grand rounds’. The division also hosts international guest lecturers under the auspices of the Visiting Lecturer’s fund.

The Research Laboratories and expertise have attracted junior and senior colleagues from other specialties and institutions who have been keen to interact with
colleagues. Such interaction includes the Department of Medicine (Prof. Bongani Mayosi), and Division of Medical Biochemistry (Prof. Peter Meissner); the Department of Chemical Pathology at the University of Stellenbosch (Prof. Rajiv Erasmus). International links include work on PCSK9 with the University of Nantes (Prof. G Lambert).

**Highlights**

**DART**
Direct Analysis in Real Time (DART) chromatography is a new development coupled to time of flight mass spectrometry that will revolutionise investigation of small to middle molecules in health and disease. Funding was finally found through the National Lottery Board to diagnose lipid and other metabolic disorders in the country. The system, apparently the first in the country, was acquired through Chemetrix Pty which included an Agilent HPLC and mass spectrometer.

**ABI 310 Sequencer**
This machine was donated by the University of Western Australia as they have advanced to modern technology and the machine can still provide excellent service in the investigation of genetic causes of metabolic disease. It will be set in operation in the near future.

**Research Fields and Staff**

**Permanent Staff**

**DR HELEEN VREEDE**
Senior Specialist; oversees routine laboratory service at GSH; method development; information technology expertise is provided nationally.

**DR GEORGE VAN DER WATT**
Specialist overseeing the routine chemical pathology laboratory and inherited metabolic disease diagnostic service at Red Cross Hospital with an additional interest in chemical pathology of HIV/AIDS, undergraduate and postgraduate teaching, and paediatric biochemistry.

**DR FIERDOZ OMAR**
Dr Omar oversees the routine diagnostic and molecular laboratory service at Groote Schuur Hospital. Dr Omar is in charge of the undergraduate teaching portfolio and is responsible for postgraduate teaching. She has a special interest in the role of cell-free DNA in prenatal sex determination. Dr Omar also takes care of the clinical pathology registrar teaching programme.

**DR PHILIP FORTGENS**
Dr Fortgens is responsible for various aspects of the routine diagnostics laboratory service at Groote Schuur Hospital, as well as a variety of enzyme assays helpful in the diagnosis of inherited metabolic diseases. He has a further interest in the molecular diagnosis of porphyria and contributes to undergraduate and postgraduate teaching.

**DR JUDY A. KING**
Medical Scientist (Principal) and Senior Lecturer. She oversees the radioimmunoassay laboratory (diagnostic and research) in the NHLS laboratory service at Groote Schuur Hospital, performs clinical diagnostic reviewing, registrar training and undergraduate and postgraduate teaching. She supervises postgraduate students with dissertations and clinical biochemistry projects.

**DR PATRICIA OWEN**
Dr Owen, a principal medical scientist has continued contributing to the Division after retirement with ongoing interests in inherited metabolic disease including complement C5 and C6 deficiencies, cystinosis, glutaric aciduria type 1 and new born screening. Postgraduate teaching is also undertaken.

**MR DAVID WOOLLEY**
Mr Woolley maintains the core laboratory and dedicates most of his time to the Pathology Learning Centre with his expertise in website design.
MS FELICITY LEISEGANG
Senior medical scientist contributing to studies on the molecular genetics of galactosaemia, spinal muscular atrophy, cystic fibrosis and limb-girdle muscular dystrophy. She is also involved in PCR studies of tuberculosis, genetic screening in general and postgraduate teaching.

DR J MCCARTHY
Medical Scientist. The chief interest currently is diagnostic and other investigations relating to therapy in homozygous familial hypercholesterolaemia using fibroblast cultures.

Dr Dee Blackhurst
Lecturer. The interest in lipid peroxidation has extended work to members of other divisions in this faculty as well as to collaborations with the health science faculty of the University of Stellenbosch. There is increasing interest in HDL metabolism and to document this by non-denaturing electrophoresis. Additionally, paraxonase activity and myeloperoxidase activities are being assayed.

PROF. DAVID MARAIS
Prof. Marais has a continued interest in severe dyslipidaemias and their genetic causes, including familial hypercholesterolaemia, dysbeta/alphaproteinemia and lipoprotein lipase deficiency. Additional interests are in lipoprotein particle size, disturbances of fatty acid metabolism and sterol biosynthesis, especially Smith Lemli Opitz syndrome. Assistance in these projects is received from Ms G Solomon, Ms B Ratanjee and Mr A Mohamed. A joint project has been undertaken with Prof J Parkington of the Division of Archaeology in nutrition with a special emphasis on n- fatty acids.

PROF. HOWARD HENDERSON
Prof Henderson, retired from active research in metabolic disorders, is assisting with diagnosis of inborn errors of metabolism at the Red Cross Children’s War Memorial Hospital laboratory.

Emeritus Professors

PROFESSOR E HARLEY

Honorary Professors

Professor Ishwarlal Jialal; Honorary Professor of Chemical Pathology and Medicine, University of Cape Town; Robert E. Stowell Endowed Chair in Experimental Pathology, Director of the Laboratory for Atherosclerosis and Metabolic Research, and Professor of Internal Medicine, Division of Endocrinology, Clinical Nutrition and Vascular Medicine, at the University of California, Davis, Medical Center.

Professor Tahir S Pillay formerly head of chemical pathology at this university, he joined the University of KwaZulu Natal. He was recently appointed as head of Chemical Pathology at Pretoria University.

Professor DB Sacks. A UCT graduate who worked in Chemical Pathology in 1981 before emigrating to the United States. He qualified as an internist and recently joined the National Institutes of Health, Department of Laboratory Medicine, Bethesda, MD, USA.

COMPUTATIONAL BIOLOGY GROUP

Head of Group: Associate Professor Nicola Mulder

Group Profile

The University of Cape Town Computational Biology (CBIO) Group is the centre of Bioinformatics activities at the university. It was originally set up as a Node of the National Bioinformatics Network, which aimed to develop capacity in bioinformatics in South Africa, and to perform world-class bioinformatics research. The CBIO Group is located within the Institute of Infectious Disease and Molecular Medicine (IDM) in the Health Science Faculty, and integrates researchers interested in bioinformatics at the university. The mission of the UCT Computational Biology Group is to become an exceptional, internationally recognized research and training center, addressing the challenges of bioinformatics capacity development in South Africa.

The group performs bioinformatics research and provides training and services in the discipline. Research focuses on infectious diseases from both the host and pathogen perspectives, particularly for TB and viral diseases. CBIO uses data mining and systems biology approaches to study the molecular biology and evolution of bacterial and viral pathogens and their interaction with their hosts. Through involvement in H3ABioNet, a pan African bioinformatics network for H3Africa, and the Human Heredity and Health in Africa (H3Africa) initiative, research has also focused on population genetics and GWA studies and the development of new algorithms to analyze the genetics of admixed populations.

CBIO has a large network of connections with other bioinformatics groups in Africa through the African Society for Bioinformatics and Computational Biology and H3ABioNet. The group also has close ties with the African Institute for Mathematical Sciences (AIMS) by supervising student essays.

DIVISION OF FORENSIC MEDICINE AND TOXICOLOGY

(Including the Gender, Health and Justice Research Unit)

Head of Division: Professor L.J. Martin

Divisional Profile

A large component of operational activity of the Division of Forensic Medicine is that of service delivery. The academic staff are on the joint staff establishment of the University of Cape Town and the WCG: Health; Forensic Pathology Service. This is a fairly new programme of the WCG: Health, established in April 2006, when the responsibility of “mortuary services” was transferred to the Province from SAPS. We are responsible for the medico-legal investigation of death of all persons who die within the Metropol, an area comprising approximately 4.5 million persons, stretching from Atlantis on the West Coast, the Peninsula, the City, to everything south of the N2 up to, but not including, Khayelitsha. Our clinical services are based at Salt River Mortuary and we perform approximately 3500 autopsies per annum.

The Division now has a dedicated research laboratory in the Falmouth Building. We provide a clinical
teaching neuropathology laboratory with a specialist neuropathologist. The Division has limited research activities due to our heavy investigative service load, but this is slowly increasing with our new M Phil offering in Biomedical Forensic Sciences.

There are active collaborations with the departments of Anatomical Pathology, Surgery, Obstetrics and Gynaecology, Human Genetics, Paediatrics and Psychiatry; and EMS and the Law Faculty.

A range of activities related to the role of Forensic Medicine in public policy and health promotion are being pursued. These relate specifically to violence against women and children, the role of drugs and toxins in deaths, and firearm injuries. We provide input into the Provincial Injury Mortality Surveillance System (PIMSS).

**Research Fields and Staff**

**Permanent Staff**

**PROFESSOR L.J. MARTIN**

Head of Clinical Department & Professor: Management protocols for rape survivors; domestic homicide; monitoring implementation of rape law reforms; domestic violence guidelines for the health sector; epidemiology of female murder; aortic disease; indicators for the Lodox Statscan in children; age estimations for children using Lodox statscans; National study of female and children homicide in South Africa; Child Death Reviews.

**DR G.M. KIRK**

Head of Clinical Unit & Senior Lecturer: Sudden deaths in sport; firearm injuries; death notification; drug-related deaths; forensic histopathology; history of forensic medicine.

**DR Y.Y. VAN DER HEYDE**

Senior Specialist & Senior Lecturer: The effects of prenatal alcohol exposure; paediatric mortality; animal bites in children; early adolescent suicide, child homicide including child abuse; sudden unexpected death in childhood including SIDS.

**DR L. LIEBENBERG**

Senior Specialist & Senior Lecturer: Firearm fatalities and final judicial outcome; aortic disease project; mast cell Tryptase; case studies – curious deaths; atherosclerotic disease prevalence in the Cape Town population; Lodox X-ray application in the forensic setup.

**DR M. HEYNS**

Senior Lecturer: Forensic Science; Educational Research; Gross Anatomy; Entomology; Blunt force trauma to the skull

**DR I.J. MOLEFE**

Specialist and Lecturer: A 10 year retrospective study of epidemiology and analysis of injury patterns of femicide and rape homicide in Cape Town: A follow-up study.

**DR S. MAISTRY**

Specialist and Lecturer: Deaths on Table Mountain: A retrospective analysis 2000-2011.

**DR S. MFHOLOZI**

Specialist and Lecturer: Development of the NecroChronometer: determining the post-mortem interval using a combination of three methods and location-specific weather information.

**DR E.B. AFONSO**

**DR A KHAN**

SNP genotypes and skin tone variation in Pregnancy related maternal deaths at Salt River Forensic Pathology Laboratory (SRFPL). A 5 year retrospective study of the epidemiological data and spectrum of pathology and disease in all pregnancy related deaths at SRFPL irrespective of the cause of death.

**DR I.H. ALLI**

Forensic Pathologist: Combating human trafficking; motor vehicle injuries sustained at various speeds; deaths from explosions; review of rape victims in a single Thutuzela Centre over a 5 year period. Research study: Grading the degree of difficulty of post-mortems.

GENDER, HEALTH AND JUSTICE RESEARCH UNIT

Acting Director: Dr Kelley Moult (2013)

Director: Associate Professor Lillian Artz

Unit Profile

The mission of this Unit is to improve service provision to victims of violence against women in South Africa through research, advocacy and education. Drawing together established researchers with a strong record of social-action research in disciplines including law, criminology, forensic sciences and pathology, gynaecology, and psychology, this Unit is the first of its kind in South Africa to respond to the pressing need for research and interventions that cross disciplines in support of our efforts to address the alarmingly high levels of violence against women in this country. The Unit fulfils its mission by conducting rigorous evidence-based research into:

- South African women’s experiences of sexual and gender-based violence;
- The responses of women, their communities and the criminal justice, health, and welfare systems to violence against women;
- The intersections and disjunctures between health and criminal justice responses to violence against women;
- The developmental context in which violence occurs, and the role of violence in perpetuating women’s under-development;
- The implementation difficulties of translating ‘law on paper’ into ‘law in practice’ in health, criminal justice and medico-legal settings;
- The development of indicators for monitoring the implementation of progressive legislation and compliance by criminal justice and health sector personnel with statutory duties;
- Risk factors and women’s pathways to crime and experiences and impacts of female incarceration;
- International and local models of best practice for addressing violence against women.

The Gender, Health and Justice Research Unit was awarded the University of Cape Town’s Social Responsiveness Award for 2009.

DIVISION OF HAEMATOLOGY AND UCT LEUKAEMIA UNIT

Head of Division: Professor Nicolas Novitzky

Divisional Profile

Diagnostic Services

The Division of Haematology at Groote Schuur Hospital is a complex unit with multi-disciplinary activities that include outpatient clinics, admission beds as well as diagnostic and research laboratories. The clinical services are organised under the umbrella of the Department of Internal Medicine, while the laboratory diagnostic sections are under the broader organisation of the Department of Clinical & Laboratory Sciences and National Health Laboratory Service (NHLS).

The laboratory continues to offer comprehensive diagnostic testing for the diagnosis and management of all haematological malignancies. It also offers diagnostic services for a Comprehensive Haemophilia Centre, as well as to a number of tertiary/quaternary programs. This laboratory also acts as a tertiary referral centre for local hospitals and outlying clinics of the Western Cape, as well for referral samples from the Eastern Cape. The routine diagnostic and molecular haematology laboratories were again successfully accredited by SANAS. Dr Wilhelm van Schalkwyk has been appointed as the Haematology pathologists at Red Cross Hospital and took over from Dr Margie Shuttleworth who retired last year.

Teaching and Training

The department remains a primary teaching and training site for medical technologists, technicians, undergraduate medical students of the University of Cape Town and registrars in Haematopathology and Clinical Haematology. Currently there are five haematology pathology registrars one Clinical Pathology and Clinical Haematology registrar who are enrolled in the UCT postgraduate program.

Dr Karen Shires continues to provide training in the molecular haematology course for haematology registrars and technologists together with Ms Iva Shankland. Dr Karen Shires and Ms Iva Shankland have provided PCR and DNA lectures/practicals for Anatomical Pathology registrars. Dr Karen Shires is part of a team who have developed the Molecular Forensic MSc course. She is the Forensic Genetics course convener.
Dr Shaheen Mowla is involved in the following Undergraduate Teaching: MBChB Intercalated Molecular Medicine course: Basic cell structure and function; Cell Cycle; Cell Stress responses and cell death mechanisms; Restriction Enzymes and Electrophoresis; MBChB Semester 2: Histology of the skin; MBChB Semester 3: Histopathology of the skin.

Haematology Research Projects

DR KAREN SHIRES
Novel diagnostic, prognostic and MRD assays for haematological malignancies; cancer testis expression in Multiple Myeloma.

PROF NICOLAS NOVITZKY
Immunomodulation of stem cells for transplantation.

DR SHAHEEN MOWLA
Molecular Biology of Cancer; Burkitt’s Lymphoma and HIV; Role of activation-induced cytidine deaminase in cancer; miRNA in cancer

DR L A DU PISANI
Malaria diagnosis, Western Cape, managed and the outcome.

DR JESSICA OPIE
HIV-Associated Burkitt Lymphoma and Antiretroviral Therapy; HIV-Associated Hodgkin Lymphoma.

Research Fields and Staff

Professor Nicolas Novitzky
Haematopoietic stem cell biology; clonogenic assays; haematopoietic stem cell transplantation; immune reconstitution; haematological malignancies

Dr Cecile du Toit
Haematopoietic stem cell transplantation; haematological malignancies; haemophilia

Dr Estelle Verburgh
Haemophilia; thromboembolism; stem cell transplantation

Dr Jessica Opie
Molecular biology of neoplasia: chronic myelogenous leukaemia; coagulation abnormalities

Dr Karen Shires
Molecular biology and diagnostics

Dr Shaheen Mowla
Minimal residual disease and flow cytometry.

Mrs Rygana Abdulla
Cellular biology of neoplasia; clonogenic assays

DIVISION OF HUMAN GENETICS

Including the MRC/UCT Human Genetics Research Unit and CANSA’s National Colorectal Cancer Research Consortium

Head of Division: Professor Raj S. Ramesar

Divisional Profile

The Division is unusual in that it conducts its business through three interacting ‘institutions’:

1. an extensive clinical service through the Provincial Government of the Western Cape;
2. its laboratory diagnostic services through the National Health Laboratory Services, and
3. its academic (research and teaching) activities through the University.

The UCT/MRC Human Genetics Research Unit was created while the Human Genome Project was underway. The mandate for this Unit was (i) primarily one of capacity development in the field of Genetics and Genomics, (ii) understanding the relevance of developments in genetics and genomics, as they may be applicable to South Africans, and (iii) the translation of research to the clinical environment.

An emphasis of this Unit is the investment in understanding the rich Human Diversity on our continent and relating this to disease and health. In this regard there has been a head-on engagement with state of the art high-throughput genetic studies of indigenous southern African population populations, which has resulted in the empowerment and capacity development of South African researchers in large scale data handling and analysis. The Division is also involved in several Human, Hereditary and Health Africa projects in networks spanning the continent (www.h3africa.org), and which are funded by the National Institutes of Health (USA) and the Wellcome Trust (UK).

A further investment has been in taking genetics to the ‘clinical’ high street. A measure of relevance and success of the Unit in this regard, is its attraction to other mainstream clinical practitioners e.g. from the disciplines of Gastroenterology, Nephrology, Internal Medicine, Psychiatry, Surgery, and Dentistry (UWC) who are completing PhDs in Genetics, in this Unit. A substantial effort has been made into introducing genetics/genomics into the undergraduate MBChB curriculum and to specialist groups.

Research Fields and Staff

PROFESSOR RAJ S. RAMESAR (UCT/PGWC)

Head of Division and Personal Chair
Director: MRC Human Genetics Research Unit
Chairman: NGO The Africa Genome Education Institute
Principal Investigator: Genetics of Bipolar Disorder; Genetics of Retinal Degenerative Disorders; Molecular Genetics of Complex Disorders; Pharmacogenetics – Adverse Drug Reactions in Cancers

PROFESSOR JACQUIE GREENBERG (UCT)

Principal Investigator: Genetics of Neurological Disorders; Genetics of Neuromuscular Disorders
Co-Principal Investigator: Genetics of Retinal Degenerative Disorders

EMERITUS PROFESSOR PETER BEIGHTON

Principal Investigator: Genetics Connective Tissue Disorders

HONORARY PROFESSOR WILMOT JAMES

HONORARY PROFESSOR MATTHEW WOOD

Co-investigator: Genetics of Neurological Disorders
Honorary Senior Lecturers

DR LEON JEDEIKIN
DR SOLLY ZIEFF

ASSOCIATE PROFESSOR AMBOISE WONKAM (UCT)
Principal Investigator: Phenotypic correlation of sickle cell anemia to genotypic variations; Genetics of Deafness

ASSOCIATE PROFESSOR COLLET DANDARA (UCT)
Principal Investigator: Pharmacogenomics

DR KAREN FIEGGEN (PGWC / UCT)
Senior Specialist: Principal Investigator: X- linked Mental Retardation; Bardet-Biedl Syndrome

MRS. THERESA RUPPELT (NHLS)
Laboratory Manager: Cytogenetics

DIVISION OF IMMUNOLOGY

Head of Division: Professor Clive Gray, PhD.

Divisional Profile

The Division of Immunology is involved with a range of activities from identifying the basic mechanisms of immunity in infectious disease to immunology diagnostic testing in the National Health Laboratory Services (NHLS) at Groote Schuur Hospital. The vision statement for the Division of Immunology is “Driving Science to promote World Health” and a detailed strategic document outlining the next 5-10 years has been formulated. Part of the mission is to formulate and introduce Immunology as a curriculum subject for MBChB undergraduate students. In 2013, an 8-lecture course was introduced to the 1st year undergraduate students in semester 2 covering the basics of molecular and clinical immunology. Numerous staff are also either Full or Associate members of the Institute of Infectious Disease and Molecular Medicine (IDM) and there is a very integrated relationship between the Division of Immunology and the IDM.

Basic Research: The DOI houses the UCT/MRC Unit on Immunology of Infectious Diseases, an Allergy Section and the SARCHi chair on ‘Immunology of infectious diseases in Africa’. The Division has an internationally recognized expertise in generating transgenic mice, for use in a wide range of immunological studies applicable to communicable and non-communicable diseases. These have been used to make important advances in diseases, such as Tuberculosis, Bilharzia, African Trypanosomiasis, Candidiasis and cutaneous Leishmaniasis and have contributed significantly to identifying fundamental cellular and molecular immunological mechanisms. Together with international and national collaborations, these animal tools contribute to many advances in Immunology and other fields. Basic research in the Allergy Section has focused on the role of IL-4 and IL-13 in allergy as well as the application of novel assays to identify sensitivity profiles. There are very close ties with the South African component of the International Centre for Genetic Engineering and Biotechnology, providing a very strong genomics thrust to the Division.

Translational Research: There is also a strong clinical immunology emphasis in the Division, specifically in HIV and TB immunology where studies are underway to understand adaptive and innate immune responses during acute HIV infection and in infants exposed to HIV in utero and upon receiving different childhood vaccinations. Successfully funded grants have been garnered from the Canadian Institute of Health Research and the South African Department of Science and Technology for investigating the link between breast-feeding practices and newborn infant immune activation status, which may mitigate EPI responses. Understanding the link between HIV-induced inflammation and autoimmunity, where peripheral tolerance has been broken, is also a new direction within the Division.

NHLS activities: The combined functions of the Laboratory for Tissue Immunology (LTI) and the Clinical Immunology and Allergy Laboratory are responsible for providing NHLS activities. The LTI is responsible for HLA class I and class II typing for solid organ and bone marrow/stem cell matching. The Laboratory also performs cross-matching and pre-formed antibody testing for renal transplantation. The LTI is accredited with the European Federation of Immunogenetics (EFI) and is the only such accredited laboratory in South Africa. The Clinical Immunology and Allergy Laboratory performs routine diagnostic testing for autoantibodies and different allergies. The DOI plays a leading role in the Immunology Expert Committee, which has formulated a new workload model for immunology services within the NHLS. The major task for the Expert Committee over the next year will be to formulate a national immunology curriculum so that immunology can become a registered medical specialist discipline.
Teaching: The Division has an active teaching component in the medical undergraduate syllabus and provides cutting edge lectures on the basics of the immune system and integrates immunology concepts and principles with the case studies and problem based learning approach by the Health Sciences Faculty. More advanced courses are offered at the post-graduate level through the Honours in Infectious Disease and Immunology programme and the short semester Research Immunology Course for postgraduate students. The Division also holds workshop on infectious disease and immunology and specifically train students from other countries in Africa on advanced immunology related techniques and cutting-edge science.

International Links: There are very strong links between staff in the Division with international collaborators on all continents in both basic and applied research.

Research Fields and Staff

Academic Staff

PROFESSOR CLIVE GRAY, PHD
Professor of Immunology
Wernher Beit Chair and HODv Immunology, Joint UCT/NHLS
Full member of the IDM and member of Exco; B rating by NRF; Research Profile: Immunology of HIV infection and antigen-specific T cell responses during acute infection.

PROFESSOR FRANK BROMBACHER, PHD
Professor of Immunology
UCT Fellow; SARCHi Chair, Director of an MRC Unit; ICGBE Coordinator & Group leader, Member of IDM; A1-rating by NRF; Research profile: Immunology of infectious diseases, including Tuberculosis, African Trypanosomiasis, Leishmaniasis, Bilharzia and other Helminth infections.

A/PROFESSOR MUZZAM JACOBS, PHD
NHLS Medical Scientist and UCT A/Professor; Full member of the IDM. Research profile: Understanding host pathogen interaction and associated immune mechanisms that bring about protection against tuberculosis infection.

DR WILLIAM HORSNELL PHD

DR HEATHER JASPAN MD, PHD, FAAP
Senior Lecturer. Associate member of the IDM. Research Profile: Investigating immune activation, T cell immunity and susceptibility to HIV in infants.

Visiting Professors

PROF GUIDO FERRARI
Professor, Duke University Medical Center, Durham, North Carolina, USA
Identifying CD8+ T cell activation, functional profile, and memory differentiation during acute HIV infection and role in in determining HIV escape mutants. Identifying epitope targeted by ADCC-mediating Antibody responses and their role in protection from infection.

PROF JIM ALEXANDER
Strathclyde University, Scotland

Postdoctoral Fellows

DR LYCIAS ZEMBE
Understanding CD8+ T cell recognition patterns in HIV infection

DR SURAJ PARIHAR
Dr Reto Guler
Investigate using 4 different pathogens, i.e. Listeria monocytogenes, mycobacteria tuberculosis, mycobacteria bovis BCG, and Leishmania major

DR ROANNE KEETON
TB Immunology
DIVISION OF MEDICAL BIOCHEMISTRY

Head of Division:
Professor Peter Meissner

Divisional Research Profile

The Division of Medical Biochemistry is a preclinical, basic science division in the UCT Faculty of Health Sciences and is associated, either wholly or partly, with a number of advanced research entities. Some such entities are laboratory research groups contained entirely within Division, while some have certain components or personnel falling within the Division, affiliated to other Institutes or Departmental groupings.

Specifically: The Division incorporates the MRC/UCT Research Group for Receptor Biology (co-directed by A/Prof Arieh Katz and Dr Colleeen Flanagan, ex-UCT now at WITS, and Prof Bob Millar, Senior Scholar in our Division); the UCT Structural Biology Research Group (directed by Prof Trevor Sewell); members of the Institute of Infectious Disease and Molecular Medicine (IIDMM) at UCT (Profs Sturrock, Blackburn, Meissner, Parker, Katz and Leaner); and the International Centre for Genetic Engineering and Biotechnology (ICGEB) (Prof Iqbal Parker).

Through 2013 there were 47 research postgraduate students registered for either Master’s or PhD (53 in 2012), and a further 9 Honours students were based wholly in Medical Biochemistry for the duration of their research projects (April – November) (11 in 2012). The Division graduated 3 PhD and 6 MSc students during the course of 2013 (4 PhD and 2 MSc during 2012). Together with various scientific and academic staff our postgraduate students and 22 postdoctoral fellows (20 in 2012) continued to form the basis of a vibrant and ongoing research thrust and culture in the Division, forming the core of our Divisional research strategy – out of which flows a contemporary and effective approach to teaching at both under- and post-graduate levels.

During 2013 the Division and its’ affiliates published 69 papers in ISI accredited science journals, and 4 non-accredited journal articles. Research activities of the Division cover seven major areas:

1. GnRH receptors, signalling, structure – function and as a target for development of therapeutics for treatment of reproductive cancers (Katz & Millar labs);
2. Molecular mechanisms of cervical cancer and oesophageal cancer development and progression (Leaner, Hendricks and Parker labs);
3. Identification and characterisation of anticancer drugs in natural products (Hendricks lab);
4. Angiotensin converting enzyme (ACE) structure activity relationships and development of
ACE inhibitors (drug design) for treatment of hypertension, congestive heart failure, myocardial infarction and renal disease (Sturrock lab);
5. Application of functional proteomics for diagnostics, drug and vaccine development for infectious disease and cancers (Blackburn lab).
6. Diagnostic, structure and function studies in the porphyrias and haem biosynthesis (Meissner lab, currently sited and staffed in the Dept. of Medicine)
7. Structural basis for differential regulation of glutamine synthetase in humans and the malaria parasite, structural studies on the nitrilase family of enzymes in the context of cancer, mycothiol synthetic pathway in *Mycobacterium tuberculosis* (Sewell lab, currently located on UCT upper campus)

Physical space for the Structural biology research Unit and the Porphyria labs remain a problem.

Research staff members, fellows, postgrad students participated in many local and international conferences during the year. Our Division considers such travel essential and worthwhile in that they give rise to new collaborations and maintenance of established collaborations and lab research visits.

MEDICAL MICROBIOLOGY

Head of Division:
Professor Mark Nicol

Divisional Profile

The Division of Medical Microbiology (www.medmicro.uct.ac.za) encompasses a tertiary diagnostic microbiology service, provided by the National Health Laboratory Service, Groote Schuur Hospital and an active research programme based at the Health Sciences Campus.

We aim to conduct research that is relevant to the needs of diagnostic microbiology services and focused on important infectious diseases in South Africa. This includes work on childhood febrile illness (pneumonia, meningitis and diarrhoea), the origin and evolution of the human microbiome in early childhood, the development and assessment of novel diagnostics for tuberculosis, the epidemiology of drug-resistant tuberculosis as well as the transmission and molecular epidemiology of drug resistant pathogens within our hospitals.

The Division is the academic home of the highly regarded Molecular Microbiology Research Unit (www.mrc.ac.za/mycobacteriology/mycobacteriology) headed by Professor Valerie Mizrahi and Dr Digby Warner which aims to develop and apply genetic tools for the identification, validation and characterisation of novel drug targets and vaccine candidates for tuberculosis. The Division is also the home of Professor Gregory Hussey who leads the ‘Vaccines for Africa’ Initiative (www.vacfa.com) which is a partnership of concerned individuals and organizations who have come together with the expressed purpose of increasing awareness of and promoting uptake of vaccines on the African continent. Two Wellcome Trust fellows (Dr Helen Cox, Intermediate Fellow and Dr Mamadou Kaba, Research Training Fellow) are based in the Division.
The Division has been successful in attracting substantial research funding from the Wellcome Trust, EDCTP, National Institutes of Health, Carnegie Foundation, Howard Hughes Medical Institute and Bill and Melinda Gates Foundation in recent years. 2013 was a successful year for research in the Division, with the award of two Wellcome Trust Fellowships and 30 publications, including publications in high impact journals.

The composition of the Division is complex with staff drawn from the University of Cape Town, Groote Schuur Hospital and the National Health Laboratory Service and National Institute for Communicable Diseases. This mix of pathologists, scientists and students offers the opportunity for creative, cross-disciplinary research.

Research Fields and Staff

Permanent Staff

PROFESSOR MARK P NICOL
Development and evaluating point-of-care tests for tuberculosis; the strain biology of *Mycobacterium tuberculosis*; the origin and evolution of the human microbiome in early childhood and its impact on respiratory illness.

PROFESSOR GREGORY HUSSEY
Understanding the dynamics of TB infection and disease in adolescents; the epidemiology of TB in infants and young children; evaluation of new TB vaccines

PROFESSOR VALERIE MIZRAHI AND DR DIGBY WARNER
Investigate fundamental aspects of the metabolism and physiology of *Mycobacterium tuberculosis* of relevance to tuberculosis drug discovery and drug resistance

DR C BAMFORD
Laboratory detection of multi-resistant organisms; molecular epidemiology of hospital acquired infections; rational use of antibiotics and surveillance of antimicrobial resistance; appropriate use of microbiological investigations; microbiological diagnosis of tuberculosis

DR LOURENS ROBBERT
Enhanced surveillance for shiga toxigenic *Escherichia coli* in stool specimens from the Western Cape.

DR CLINTON MOODLEY
Carbapenemase Surveillance

Registrars, Joint Appointments

DR SINDILE NTULI
DR CHAD CENTNER
DR HAFSAH TOOTLA

Honorary Staff

A/PROFESSOR DAVID LEWIS
• Gonococcal resistance
• STI surveillance
• Men’s sexual health

DR JOHN SIMPSON
Laboratory diagnosis of tuberculosis and identification of drug-resistance
Fixed-term appointment staff

DR HELEN COX (WELLCOME TRUST INTERMEDIATE FELLOW)
A systems approach to evaluating prospects for the control of drug-resistant tuberculosis in Khayelitsha, South Africa

DR WIDAAD ZEMANAY
Evaluation of novel diagnostic methods for tuberculosis in adults and children; evaluation of the impact of novel TB diagnostics on patient outcomes

DR LEMESE AH TOW EDRIES
• The evaluation of inter-seasonal house dust microbiota in the Western Cape, South Africa
• Molecular detection of Helicobacter pylori in stool of apparently healthy children, the Drakenstein sub-district, South Africa

DR LINDY DICKSON-HALL
Linkage to Care for drug resistant TB patients following Xpert implementation in SA.

Postdoctoral fellows

DR ELLOISE DU TOIT
Household dust microbial burden and the development of recurrent wheezing in children in the Western Cape: a cohort study

DR MAMADOU KABA
• The faecal microbial community and its association with wheezeing illness in young Children – The Drakenstein Child Lung Health Study, South Africa
• Phenotypic and genomic study of the antibiotic resistome in a paediatric population, Drakenstein sub-district, South Africa
• Dynamics of faecal bacterial populations in early infancy as determined by massively parallel sequencing
• Epidemiology of extended spectrum beta-lactamase and carbapenemase-producing bacteria in apparently healthy children, South Africa

DR VERONICA ALLEN
Sequencing and identifying rifampicin discordant results from Gene Xpert

DIVISION OF MEDICAL VIROLOGY

Head of Division: Professor Carolyn Williamson

Divisional Profile

The Division of Medical Virology contributes to the diagnosis, treatment, prevention and eradication of viral diseases in South Africa through a diagnostic laboratory service together with a dynamic research programme.

Research within the Division focuses on Human Immunodeficiency Virus (HIV), Human Papillomavirus (HPV), virus discovery and vaccinology, and is largely performed within the Institute of Infectious Diseases and Molecular Medicine. The division has contributed to research on HIV prevention, transmission and pathogenesis (including research on broadly cross-neutralizing antibodies; HIV superinfection; the impact of mucosal inflammation and other sexually transmitted co-infections on HIV transmission risk; and HIV vaccine and microbicide development); and HPV natural history in South Africa and next generation sequencing discovery of novel HPVs. There has also been research on BCG and poxviruses as vaccine vectors. The division hosts one NRF Research Chair (Professor Anna-Lise Williamson, Vaccinology).

The Virology Diagnostic laboratory is a SANAS accreditation facility within the National Health Laboratory Service, and is located at Groote Schuur Hospital (GSH). It provides a comprehensive service to both GSH and Red Cross Children’s Hospital, and serves as a regional reference centre providing a clinical and diagnostic service to local teaching hospitals and surrounding public health clinics.

The division contributes to undergraduate teaching and plays a major role in post-graduate training and currently hosts 31 post-graduate students (registered for, MMed, MSc, PhD or Postdoc degrees).

Special awards / honours / promotions
• Carolyn Williamson was accepted as a Fellow of UCT
• Diana Hardie was promoted to Associate Professor
• Gerald Chege was promoted to Senior Research Officer
• Shaun Barnabas was awarded MRC National Health Scholars Program Scholarship for Clinical Research 2014
• Shaun Barnabas was awarded Fogarty Training Fellowship 2013
• Colin Anthony was awarded a Fogarty Postdoctoral Fellowship 2013
• Tracy Mering was awarded a Carnegie Postdoctoral Fellowship 2013
• Gama Bandawe, Ruby Bunjun, Shivan Chetty and Kristy Opperman were awarded Carnegie PhD scholarships
• Ruby Bunjun and Gama Bandawe were awarded prestigious CAPT (Canada-Africa Prevention Trials Network) Academic Scholarship awards for 2013
• Colin Anthony received a Clinical Infectious Diseases Research Initiative (CIDRI) equipment award for a Bio Rad QX200 droplet digital PCR (ddPCR) system
• Ruby Bunjun and Kristy Opperman won third prizes for the oral presentation and poster presentation respectively at the Faculty Postgraduate Research Day

Distinguished visitors
• Prof Robin Shattock, Imperial College London, UK
• Prof Francesca Chiodi, Karolinska Institute, Stockholm, Sweden
• Prof Tom Hope, Northwestern University, Chicago, USA
• Dr Kelly Arnold, MIT, USA
• Dr Andy Redd, NAID

Research Staff and Fields

Emeritus Professor

PROFESSOR KEITH DUMBELL

Academic Staff

PROFESSOR CAROLYN WILLIAMSON (UCT/NHLS)
HIV diversity and pathogenesis; HIV-1 vaccine development – Head of Division.

PROFESSOR ANNA-LISE WILLIAMSON (NHLS/UCT)
Human Papillomavirus; Poxviruses, Vaccinology, Microbiomics, Viromics

ASSOCIATE PROFESSOR DIANA HARDIE (NHLS/UCT)
Viral infections in the immuno-compromised host; Molecular biology of Hepatitis B Virus – Head Diagnostic Virology Laboratory.

ASSOCIATE PROFESSOR JO-ANN PASSMORE (NHLS/UCT)
HIV prevention and pathogenesis; HPV clinical disease and immunology, mucosal STIs.

DR WENDY BURGERS
HIV Immunology and Pathogenesis

DR ROS CHAPMAN
HIV Vaccines

DR NICOLA DOUGLASS
HIV Vaccines / poxviruses

DR GERALD CHEGE
HIV Vaccines

DR MARVIN HSIAO (NHLS/UCT)
Clinical Virology, cytomegalovirus and molecular diagnostics

DR. STEPHEN KORSMAN (NHLS/UCT)
Clinical Virology, Hepatitis B, molecular diagnostics and outreach

DR ZIZIPHO MBULAWA (NHLS/UCT)
Human Papillomavirus

DR CATHERINE RIOU
HIV Immunology and Pathogenesis

Dr Heidi SMUTS (NICD/NHLS/UCT)
Hepatitis C, Novel respiratory viruses.

DR ZIYAAD VALLEY-OMAR (NICD/NHLS/UCT)
Molecular Epidemiology
Honorary Staff

DR ERICA ANDERSEN-NISSEN
Research Associate

DR TIM TUCKER
Senior Lecturer; HIV.

Research Staff

MELISSA-ROSE ABRAHAMS
HIV Diversity and Pathogenesis.

CRAIG ADAMS
HIV Vaccines.

BRUCE ALLAN
Human papillomavirus.

DESIREE Bowers
HIV Vaccines.

SHIREEN GALANT
HIV Vaccines.

HOYAM GAMIELDEN
Mucosal HIV/STI infections.

JINNY MARAIS
HIV Diversity and Pathogenesis.

TRACEY MULLER
HIV Immunology and Pathogenesis.

NONKULULEKO NDABAMBI
HIV Diversity and Pathogenesis.

CECILIA RADEMEYER
HIV Diversity and Pathogenesis.

DEBBIE STEWART
HIV Diversity and Pathogenesis/Project co-ordinator and GLP archivist

DANIEL SHEWARD
HIV Diversity and Pathogenesis.

RUWAYHIDA THEBUS
HIV Diversity and Pathogenesis.

Postdoctoral Fellows

DR COLIN ANTHONY
HIV Diversity and Pathogenesis

SHAMEEM JAUMDALLY
Mucosal HIV/STI Infections

DR TRACY MEIRING
Microbiomics and Viromics

DR COBUS OLIVIER
Mucosal HIV/STI Infections

DR PHILIPPE SELHORST
HIV Diversity and Pathogenesis.

DR LINDI ROBERTS
Mucosal HIV/STI Infections

DR ANDREIA SOARES
HIV Immunology and Pathogenesis

DR NATALIE STRICKLAND
HIV Immunology and Pathogenesis

Administrative Staff

NYAMEKA MHLONYELWA-MONA
Divisional Secretary

SUSAN LANFEAR
PA to Prof Anna-Lise Williamson

KATHRYN NORMAN
PA to A/Prof Jo-Ann Passmore and Dr Wendy Burgers

Department of Health and Rehabilitation Sciences

Head of Department: Associate Professor Shajila Singh

Departmental Profile

The Department of Health and Rehabilitation Sciences is a multi-professional Department, and offers undergraduate and postgraduate programmes in Audiology, Speech and Language Pathology, Occupational Therapy, and Physiotherapy. The Department also offers Postgraduate Diplomas, Master’s and PhD programmes in Disability Studies and Nursing. The Department is characterised by diverse research interests. Much research is related to poverty and inequality, with a particular focus on disability and social inclusion. There is a strong engagement in research regarding health-related quality of life and the International Classification of Functioning and Disability. The Department also home to professional-specific clinical research in physiotherapy, occupational therapy, communication sciences and disorders and nursing. The Department has also developed expertise in clinical education research, to enhance student learning at undergraduate and postgraduate levels.

Research Fields and Staff

Permanent staff

PROFESSOR S.L. AMOSUN
Non-communicable diseases; disability prevention and health promotion

MS HELEN BUCHANAN
Evidence-based practice; hand therapy; measurement instruments; rehabilitation in physical health; clinical reasoning and reflection

DR THERESA BURGESS
Muscle damage and endurance exercise; clinical sports physiotherapy; bioethics

MS LIZAHN CLOETE
Foetal Alcohol Spectrum Disorders; community development & occupational therapy in primary health care

ASSOCIATE PROFESSOR SHEILA CLOW
Midwifery; women’s health care; intrapartum care; mentorship

ASSOCIATE PROFESSOR SINEGUGU DUMA
Interplay between HIV and gender-based violence; sexual assault; and curriculum development

ASSOCIATE PROFESSOR EVE DUNCAN
Poverty, occupation & psychiatric disability; disability inclusion through participatory development in deep rural communities

MS EILEEN DU PLOOY
Occupation based work practice; palliative care

MS GILLIAN FERGUSON
HIV; paediatric motor assessment and rehabilitation

MS NICKI FOUCHE
Lived experiences in the care of patients in the Intensive Care Units

ASSOCIATE PROFESSOR ROSHAN GALVAAN
Occupation-based community development practice; occupational justice; occupational choice; youth; OT curriculum and human rights

MS PAM GRETCHEL
Best paediatric occupational therapy practice

DR MICHEAL HARTY
Augmentative and Alternative Communication (AAC) and family-centred intervention practices
MS CANDICE HENDRICKS
Rehabilitation of sports-related orthopaedic and neuromusculoskeletal conditions

PROFESSOR JENNIFER JELSMA
Function in children with HIWAIDS; health related quality of life; living conditions of people with disabilities; use of the ICF

ASSOCIATE PROFESSOR HARSHA KATHARD
Communication impairment; disability and service delivery

DR UNA KYRIACOS
Role of biosciences in clinical nursing education; ophthalmic nursing; preparation of nurse educators

ASSOCIATE PROFESSOR THERESA LORENZO
Disability rights and equity for youth and women; community based rehabilitation

MS SORAYA MAART
Incontinence and sexual dysfunction amongst sexually abused persons; HIV and community empowerment

MS SHAMILA MANIE
Intensive Care Unit management; cardio-pulmonary rehabilitation, TB

ASSOCIATE PROFESSOR PAT MAYERS
Mental health; support and training for primary health care providers/clinical nurse practitioners with special to HIV and ARV rollout; primary care practice teams

MR DOUGLAS NEWMAN
LGBTI health

MS VIVIENNE NORMAN
Paediatric dysphagia and early intervention

DR MICHELLE PASCOE
Speech, language and literacy difficulties in school-aged children

MS LUCRETIA PETERSEN
Ototoxicity; otoacoustic emissions

MS ROMY PARKER
Pain in HIV

DR LEOBOGANG RAMMA
Noise and public health

ASSOCIATE PROFESSOR ELElwani RAMUGONDO
Promoting childhood play in context; play, learning & development outcomes for children on anti-retroviral treatment; the politics of human occupation

MS CHRISTINE ROGERS
Vestibular assessment and management

ASSOCIATE PROFESSOR SHAJILA SINGH
Dysphagia; motor speech disorders; ethics; HIV/AIDS
Ms Amshuda Sonday
Inclusive education; profound multiple intellectual disability and quality of life

Clinical Educator Staff

MRS FATEMAH CAMROODIEN-SURVE
Early childhood intervention; parent training

MRS NAILA EDRIES
Occupational health and wellness; promoting behaviour change; musculoskeletal injury management; evaluation and feedback methods to drive learning

MRS MADRI ENGBRECHT
Disability and employment

MRS FADIA GAMIeLDIEN
Health professionals’ attitudes towards mental health service users; disability, diversity and social change

MRS FAHMIDA HARRIS
The impact of physical activity on quality of life of persons with mental illness

MS JANE LE ROUX
Evaluating the effectiveness of The Shine Program for literacy development in grade 2 and 3 learners

MR MARC NAIDOO
Clinical education models and strategies; rehabilitation in neuro patients; soccer injury prevention at school level

MRS ELEliETHA OLIVIER
Cochlear implants; bimodal fitting and FM use; balance disorders in cochlear implant recipients

MRS LAURA RUSSELL
Traumatic brain injury care pathways after discharge; assessment of aphasia in South African languages

MRS CELESTE SAMUELS
Right hemisphere communication disorders intervention and referral pathways; cerebral palsy and communication

MRS DES SCOTT
Group teaching in clinical practice; paediatric clinical practice

MRS HEATHER TALBERG
Clinical education best practice models and guidelines; developing professional and reflective practitioners
MS FREDA WALTERS
Fluency, community based rehabilitation; clinical education

DEPARTMENT OF HUMAN BIOLOGY

Head of Department: Professor Lauriston Kellaway

Departmental Profile

The Department of Human Biology (HUB) includes Anatomy; Biokinetics; Biological Anthropology; Biomedical Engineering and Medical Imaging; Cell Biology; Exercise Science; Healthcare Technology Management; Human Nutrition and Dietetics; Neurosciences; Physiology and Sport and Exercise Medicine.

The Division of Anatomy sent Professor Graham Louw and Dr Geney Gunston as delegates to the Anatomical Association of Southern Africa conference in Durban in April, and students and staff were also part of the 17th Reach to Recovery International Breast Cancer Support Conference and the UCT Human Biology and Clinical Laboratories Sciences Research Day. MSc student Kyle Paulissen won best post presentation at the Research Day. Devin Fin naughty and Carrie Clarke attended the International Association for Craniofacial Identification in Kruger Park in August. Two MSc students (Rip da Silva and Kerri vd.Berg) graduated in 2013. Professor Morris completed the second half of his Fulbright Visiting Scholarship at the Ohio State University in June but attended the American Association of Physical Anthropology meetings in Knoxville before his return. His recently published book ‘Missing and Murdered’ was awarded the 2013 WVW Howells Brook Prize by the American Association of Anthropologists and he returned to the USA in November to attend the award ceremony in Chicago.

Postgraduate students and faculty of the Division of Biomedical Engineering attended and presented papers the Annual Scientific Meeting and Exhibition of the International Society for Magnetic Resonance in Medicine (ISMRM) in Salt Lake City, the Annual Meeting of the Organization for Human Brain Mapping (OHBM) in Seattle, and at the 1st ASM/e/DA frontiers facility in HUB hosted a highly successful workshop as part of the 8th meeting of the International Proteolysis Society. Natasha Hardcastle was sponsored by Zeiss(SA) to present at the Microscopy Society meeting at Wits University.

The UCT/MRC Research Unit for Exercise Science and Sports Medicine is based at the Sports Science Institute of South Africa (SSISA). Because Prof Noakes will be retiring at the end of 2014, Prof Vicki Lambert was appointed as Acting Director in 2013. The Unit has four main research areas, namely, Health and well-being; Exercise in the management of chronic disease; Injuries and medical conditions associated with sport and exercise; and Exercise performance. During 2013, funding for research projects was received from...
uct, MRC, NRF, Training Human Resources Industry Programme (THRIP), Discovery Health and other industry partners. Within the academic staff, there are 14 NRF-rated staff. Prof Noakes has the highest rating, namely, A1. A total of 59 research articles were published by staff and students in various relevant ISI-rated journals during 2013, and 25 students graduated during 2013 (10 Honours students, 6 MSc students, 7 PhD students, 1 MPhil (Biokinetics) and 1 MPhil (Sport and Exercise Medicine). Several staff and students were recipients of awards during 2013. Of the staff, Prof Noakes was one of the City Press’ 100 World Class South Africans, under the category of Changemakers and crusaders. Dr Julia Goedecke received the Society for Endocrinology and Diabetes in South Africa (SEMDSA) Endocrinology award for the best original research paper published in 2013. Of the postdoctoral students, Dr Jordan Santos Concejero was awarded the Young Investigator Award travel grant by the European College of Sports Science to attend the European Conference of Sports Science in Barcelona, Spain. One of our MSc students, Ms Shameemah Abrahams was awarded the prestigious Master’s DST Fellowship Women in Science Award 2013. Finally, Prof Mike Lambert launched the Athlete Monitoring and Assessment Software (AMAS) which will be very useful in SSISA’s High Performance Centre.

The Division of Nutrition and Dietetics staff was consulted regularly on various nutrition issues by the public, lay media, communities, clinical colleagues as well as industry. Dr J Harbron was appointed by the National Department of Health: Nutrition Directorate to facilitate the development of the “Responsive feeding” guideline of the new paediatric Food Based Dietary Guidelines. This culminated in a publication in the SA Journal of Clinical Nutrition with Dr Harbron being primary author and three other division staff, Sharmilah Booley, Baheya Najaar and Cath Day being the co-authors. Assoc/Prof Senekal continues to serve as expert nutrition research, media liaison and project advisor to the Discovery Vitality team.

Research Fields and Staff

PROFESSOR LAURISTON KELLAWAY
Head of Department; Models of neuroinflammation, stress and brain function, in vivo and in vitro visual cortical mechanisms

PROFESSOR MALCOLM COLLINS
RUeSSM: Chief Specialist Scientist, MRC; Biochemistry; Molecular biology; Genetics – applied to performance and injuries

PROFESSOR WAYNE DERMAN
RUeSSM: Sport and Exercise Medicine Co-director, Clinical Sport and Exercise Medicine Research Group, Co-Convenor: MPhil (Sport and Exercise Medicine). Skeletal muscle dysfunction in chronic disease; exercise training in chronic disease

PROFESSOR TANIA DOUGLAS
Director of the MRC/UCT Medical Imaging Research Unit (MIRU); biomedical engineering, image processing

PROFESSOR SUE KIDSON
Developmental biology; melanocytes and hypopigmentary disorders; eye development and glaucoma

PROFESSOR MIKE LAMBERT
RUeSSM: Exercise training and recovery; Science applied to rugby, Coordinator of the Ex Sci Hons Course

PROFESSOR ESTELLE V. LAMBERT
RUeSSM: Physical activity epidemiology and chronic diseases of lifestyle; obesity and chronic disease

PROFESSOR GRAHAM J. LOUV
Human growth; medical education; skeletal analysis

PROFESSOR ALAN G. MORRIS
Human evolution; forensic anthropology, skeletal biology of early peoples in southern Africa; history of physical anthropology

PROFESSOR TIMOTHY D. NOAKES
Discovery Health Chair of Exercise and Sports Science and Director of UCT/MRC Research and Exercise
Medicine Research Unit
RUESSM: Regulation of exercise performance; sports medicine

PROFESSOR VIVIENNE RUSSELL
Neurophysiology: Development, stress, exercise and vulnerability to neuronal injury; Attention deficit hyperactivity disorder; Depression

PROFESSOR MARTIN P. SCHWELLNUS
RUESSM: Sport and Exercise Medicine, Convenor of the MPhil (Sport and Exercise Medicine) programme

ASSOCIATE PROFESSOR ANDREW BOSCH
RUESSM: Fuel substrate metabolism, exercise training

ASSOCIATE PROFESSOR DIRK M. LANG
Nervous system development; axon growth and regeneration

ASSOCIATE PROFESSOR ERNESTA MEINTJES
MIRU: NRF chair; magnetic resonance imaging

ASSOCIATE PROFESSOR EDWARD OJUKA
RUESSM: glucose disposal in muscle

ASSOCIATE PROFESSOR SHARON PRINCE
The cell and molecular biology of cancer and the identification of novel targets for anti-cancer drugs, with special focus on the T-box transcription factors Tbx2 and Tbx3.

ASSOCIATE PROFESSOR MARIJANNE SENEKAL
Head: Division of Human Nutrition, Weight management and health interventions, dietary assessment, nutritional genomics

DR COLIN ANDREW
MIRU: Senior Lecturer (part-time); Biomedical signal processing

MS ELMI BADENHORST
Lecturer; medical education, under-preparedness and academic performance

MS SHARMILAH BOOLEY
Lecturer; Division of Human Nutrition; Nutrition, HIV/AIDS and quality of life; nutrition related behaviour change interventions for prevention and management of chronic diseases of lifestyle (school and work-place based)

DR KISHOR BUGARITH
Senior Lecturer; physiology, neurobiology of stress, neurobiology of food intake

MS DINAH CURLING
Lecturer (part-time) Division of Human Nutrition

DR LESTER M. DAVIDS
Senior Lecturer; redox and antioxidant biology; skin cancer, pigmented disorders of the skin, vitiligo, hair follicle biology

MS ZARINA EBRACH
Clinical Educator (part-time); Division of Human Nutrition

DR JACQUI FRIEDLING
Lecturer; skeletal biology; physical anthropology, forensic anthropology

DR JULIA H. GOEDECKE
RUESSM: Specialist Scientist, MRC; Obesity in relation to disease risk; Exercise metabolism and sports nutrition

DR GENEY GUNSTON
Senior Lecturer; gross anatomy; clinical anatomy; medical education

DR ASFREE GWANYANYA
Senior Lecturer; cardiac pathophysiology, hypertrophy, ion channels

DR JANETTA HARBROON
Senior Lecturer; Division of Human Nutrition; Obesity and other CVD intervention, Nutritional genomics; Sports nutrition.

MS FIONA HERRMANN
Clinical Educator (part-time); Division of Human Nutrition, risks for obesity development in SA communities, nutrition in palliative oncology

Dr Lauren Hill
Lecturer; Division of Human Nutrition, clinical dietetics; critical care, nutrition in surgical gastroenterology, gastrointestinal dysfunction, parenteral and enteral nutrition, oxidative stress and antioxidants

MS FATIMA HOOSEN
Clinical Educator (part-time); Division of Human Nutrition

DR MARCIN JANKIEWICZ
MIRU: Lecturer. Cape Universities Brain Imaging Centre: Magnetic Resonance Imaging

DR LESTER JOHN
MIRU: Senior Lecturer and Software Specialist; Electromyography, Electroencephalography, Brain-Computer Interfacing, Medical Electronics & Devices

DR TRACY KOLBE-ALEXANDER
RUESSM: Senior Lecturer, Physical activity and health; Co-ordinator of the BSc (Hons) Biokinetics and MPhil (Biokinetics) courses
MS BAHEYA NAJAAR
Lecturer, Division of Human Nutrition, community nutrition, infant and young child feeding

MR MLADEN POLUTA
Senior Lecturer; Director: Healthcare Technology Management

DR DELVA SHAMLEY
Senior Lecturer; upper limb morbidity in breast cancer, molecular effects of adjuvant therapies in cancer

DR CHARLES P. SLATER
Senior Lecturer; anatomy, medical education

MR STEF STEINER
Lecturer; biomechanics

DR SUDESH SIVARASU
Lecturer, biomechanics, biomechatronics, medical devices & rehabilitation engineering

DR LIZ VAN DER MERWE
Senior Lecturer; ocular development and regeneration, vascular biology, pancreatic islet regeneration, 3-D microscopic image reconstruction.

DR WILLEM VAN DER MERWE
RUeSSM: Senior honorary lecturer: Sports orthopaedic research

DR CHRISTOPHER WARTON
Senior Lecturer; medical education, teaching materials, MRI analysis and cerebellar structure

Postdoctoral Fellows/Scientific and Research Officers, Research Associates

DR AMAAAL ABRAHAMS
Cell Biology: Research Officer. Role and regulation of the T-box transcription factor TBX3 during the cell cycle

DR YUMNA ALBERTUS-KAJEE
RUeSSM: Research Officer. Electromyography in the prevention of chronic disease in patients, and neuromuscular adaptations to exercise in athletes, commercial research.

DR ALI ALHAMUD
MIRU: Postdoctoral Fellow; magnetic resonance imaging

DR REYNA DEEYA BALLIM
Cell Biology: Postdoctoral Fellow. The identification of target genes of the transcription factor TBX2 which mediate its pro-proliferative activities in cancer and the elucidation of its crystal structure with a view to designing drugs that inhibit TBX2’s oncogenic function

DR ROBEA BALLO
Cell Biology and genetics: Genetics of vitiligo.

DR IAN BURGER
MIRU: Postdoctoral Fellow; magnetic resonance imaging

MS SUSAN COOPER
Microscopy Unit: Technical Officer

DR KJELDE DE JAGER
MIRU: Postdoctoral Fellow; automated microscopy; medical devices

DR JACQUELINE DIMATELIS
Physiology: Postdoctoral Fellow. Neurophysiology: Development, stress, exercise and vulnerability to neuronal injury; Attention deficit hyperactivity disorder; Depression

DR CATHERINE DRAPER

DR JANINE GRAY
RUeSSM: Honorary lecturer. Cricket research – research coordinator for Cricket South Africa

DR MARTHA HOLMES
MIRU: Postdoctoral Fellow, neuroimaging

MR DAVID KARPUL
RUeSSM: Research Officer: Biomechanics research, Manager of the Biomechanics Lab., electronics

DR DHESHNIE KESWELL
RUeSSM: Postdoctoral Fellow: Molecular and cellular aspects of obesity and type 2 diabetes

DR TERTIUS KOHN
RUeSSM: Senior Research Officer. Skeletal muscle biochemistry of exercise adaptation, muscle fatigue and weakness

MR SRIRAM KRISHNAN
Development of a light microscope for automated identification of TB bacilli in ZN stained sputum smears

DR JACOLENE KROFF
RUeSSM: Senior Research Officer: Manages, runs and supervises all research conducted in the Metabolic lab.

DR WENDY KRÖGER
Postdoctoral fellow in cell biology: The molecular mechanisms by which the T-box transcription factor TBX3 contributes to tumourigenesis.
DR AMOD KULKARNI  
Postdoctoral Fellow (Claude Leon Foundation). In vitro and in vivo neuro-pharmacokinetics and neuropharmacodynamics of natural neuroprotective agents.

DR ROBERT LAMBERTS  
RUESSM: Senior Research Officer (UCT)/Head of Orthopaedic Research (SUN), Predicting and monitoring performance, Thermoregulation, Biomechanics, Orthopaedics Cerebral Palsy and HIV

DR BARAK MORGAN  
MIRU: Behavioural, physiological and neuroimaging studies in affective neuroscience

DR LISA MICKLESFIELD  
RUESSM: Senior Researcher/Honorary Research Fellow (Wits University). Bone health and physical activity

Ms Mweete Nglazi  
RUESSM: Research Officer. Epidemiology and biostatistics

DR MICHAEL POSTHUMUS  
RUESSM: Senior Research Officer. Genetics – applied to performance and injuries, Sports orthopaedic research

DR DALE RAE  
RUESSM: Senior Research Officer: Circadian rhythms and performance; Commercial research division manager

DR LAURIE RAUCH  
RUESSM: Research Officer: Brain activity and cognitive stress

DR FRANCES ROBERSTON  
MIRU: Postdoctoral Fellow; magnetic resonance imaging

DR ELSKE SCHABORT  
RUESSM: Research Officer: Brain regulation of exercise; Commercial research

DR JORDAN SANTOS CONCEJERO  
RUESSM: Postdoctoral Fellow: Exercise physiology; Brain oxygenation during exercise

DR ALISON V. SEPTEMBER  
RUESSM: Senior Research Officer. Molecular human genetics

DR JEROEN SWART  
RUESSM: Honorary Research Associate. Sports medicine

DR ROSS TUCKER  
RUESSM: Senior Research Officer: Central Governor research, Exercise training; Commercial Research division co-management

MRS HENDRIENA VICTOR  
RUESSM: Senior Scientific Officer: HPLC analysis, Laboratory support

DEPARTMENT OF MEDICINE

Head of Department: Professor B.M. Mayosi

Departmental Profile

The Department of Medicine is a large clinical department which plays a leading role in medical education and research, and provides clinical services to the communities of the Western Cape and, in the case of our highly specialised services, to patients throughout southern Africa. The Department consists of 21 clinical and service divisions, 11 major research units, and four affiliated departments of medicine at GF Jooste, New Somerset, II Military, and Victoria hospitals (www.medicine.uct.ac.za). Each day, members of the department treat an average of 2,000 patients in our clinics, admit about 100 patients to our hospital services and perform over 210 medical procedures. The department offers a number of highly specialised services that are unique nationally such as allergology, bone marrow, heart, kidney, and liver transplantation, cardiac electrophysiology, endobronchial ultrasound guided bronchoscopy, and double balloon enteroscopy for visualisation of the small bowel.

There approximately 80 registrars who are training in the department, 20 of whom are from other countries such as Botswana, Ghana, Kenya, Libya, Malawi, Namibia, Swaziland, Tanzania, Uganda, Zambia, and Zimbabwe. The department produces formularies and guidelines that are used in most health facilities in South Africa, such as the South African Medical Formulary and Primary Care 101.

DIVISION OF CLINICAL IMMUNOLOGY

Head of Division:
Associate Professor S.R. Ress

Divisional Profile

The Division of Clinical Immunology undertakes a multi-disciplinary activity that includes teaching of undergraduate and post-graduate students, a clinical service involving evaluation of immune function in patients with suspected immune deficiency, and a translational research programme focussed on immunology of autoimmunity, HIV and TB.

Undergraduate teaching involves lectures in immunology to semester 3-5, 4th year, & 6th year medical student. Postgraduate teaching includes registrar teaching, 4 and 5 pm faculty of health science talks, and journal clubs. Research projects include immune pathogenesis of TB & autoimmunity.

Service delivery comprises in-and out-patient consultations. These entail an assessment of immune status in patients with suspected immune deficiency and autoimmune disorders. Research and Development (R&D) translational research involves the application of basic science advances and their implementation in innovative, clinically applicable diagnostic assays and assays for monitoring of disease activity. In the past clinical assessments were directly linked to specialized immune functional assays required for the comprehensive evaluation of immune status, performed by this unit. Several of these tests were discontinued with the formation of the NHLS who have been unable to offer all the required specialised, tertiary, complex immune assays which are labour intensive (unlike high throughput, routine assays which is their main focus). The interest, expertise and necessary facilities to undertake this function are all available in the department of medicine. There is an urgent need to re-establish essential, specialized tertiary tests that are required both for optimal care of patients, and for the maintenance of the required academic standard of a world class institute.

Research Fields and Staff

BARNES, KI.
Malaria: antimalarial therapy – drug development (including Phase 1 and First-in-human studies), operational and policy research. Antimicrobial pharmacokinetic studies to inform optimal dosing in vulnerable populations.

BLOCKMAN, M.
Rational and cost-effective prescribing of medicines; drug utilisation review; adverse drug reaction monitoring; drug policy and regulation; human research ethics.

COHEN, K.
Antiretroviral pharmacokinetics, adverse drug reactions, and effectiveness; HIV and non-communicable diseases; anti-tuberculosis drug-induced liver injury.

DENTI, P
Pharmacokinetic modelling of pharmacokinetics and pharmacodynamics of antiretrovirals, anti-tuberculosis, and anti-malarials.

GABRIELS, G.
Nutritional and traditional supplements product content validity, contamination and adulteration; drugs in sport.

MAARTENS, G.
Adherence-resistance relationships in antiretroviral therapy; treatment algorithms for HIV-associated tuberculosis; tuberculosis preventive therapy for people living with HIV; pharmacoeconomic evaluation of antiretroviral therapy; pharmacogenomics and adverse drug reactions of antiretrovirals; HIV and non-communicable diseases.

MCILLERON, H.
Pharmacokinetic-pharmacodynamic relationships of anti-tuberculosis and antiretroviral drugs; pharmacogenomics; population pharmacokinetics; drug interactions between antiretrovirals and anti-tuberculosis drugs.

SMITH, PJ.
Pharmacokinetics of anti-tuberculosis and antiretroviral drugs; in vitro antimalarial assays, toxicology, drug development.

WIESNER, L.
Pharmacokinetics and Pharmacodynamics of new antimalarial and anti-TB compounds in small animal models. Bioanalytics of clinical pharmacokinetic studies.

DIVISION OF ENDOCRINOLOGY AND DIABETIC MEDICINE

Head of Division: Professor N.S. Levitt

Divisional Profile

The Division provides an inpatient and outpatient clinical service and sub-speciality training in adult endocrinology and diabetes. It has close clinical links with Paediatric Endocrinology and Diabetes, Reproductive Endocrinology and Chemical pathology.

Research

The Division is involved in a wide range of research activities, interacts with a number of international and local collaborators and is a member of the recently established Chronic Disease Initiative for Africa. The primary areas of research are:

- **Metabolic consequences of antiretroviral therapy in HIV+ patients and:** A number of cross-sectional and longitudinal studies examine the metabolic consequences of HAART are still in progress. These have been funded by the World Diabetes Foundation and Department of Health.

- **Burden of disease:** The contribution of diabetes and other chronic diseases to the overall burden of disease pattern in the South African context is been studied in collaboration with Dr Debbie Bradshaw, BOD Group, MRC and Professor Karen Hofman from the University of Witwatersrand.

- **Phenotype of patients presenting with diabetic ketoacidosis in Cape Town.** This study aim to describe the phenotype and type of diabetes in people presenting with diabetic ketoacidosis in Cape Town; to develop standardized strategies for the safe withdrawal of insulin and prediction models to aid in identifying patients that may not require lifelong insulin.

- **Understanding the epidemiology and health system impact of the overlap between infectious and non-communicable diseases in low- and middle-income countries.** These studies are being undertaken in collaboration with the Institute of Infectious Diseases and Molecular Medicine, School of Public Health and Family Medicine, and other international members of a Worldwide University Network grant.

- **Obesity:** In collaboration with the Department of Human Biology, a number of studies are in progress. These examine the mechanisms underlying the aetiology of obesity and insulin sensitivity in black and white African women.

- **Addison’s Disease:** Cardiovascular risk factors in Addison’s disease has been investigated in collaboration with the University of Gothenberg. The impact of glucocorticoid receptor polymorphisms on cardiovascular risk factors has been assessed in Addison’s disease.

- **Health Systems Research:** The Division collaborates in projects being conducted by the Chronic Diseases Initiative for Africa. These include: a pragmatic cluster randomised trial of an integrated guideline for the management of diabetes and other chronic diseases in the Eden/Overberg primary care setting, a randomised controlled trial to evaluate the effectiveness of a group diabetic education programme using motivational interviewing in underserved communities; the development of a resource package for primary health care providers and community health workers to enable them to offer brief counselling on lifestyle, evaluation of the roles of community health workers in non communicable disease care in the primary care setting and a randomised trial of the use of mobile phone technology to enhance adherence in people with hypertension.

- **Diabetes in the older person** in collaboration with the Division of Geriatrics, this study aims to develop a self-Management care program for Older People with Type 2 diabetes attending Community Health Centres in Cape Town.

HATTER INSTITUTE FOR CARDIOLOGY RESEARCH

Director: Prof. Karen Sliwa-Hähnle

Institute Profile
Under the directorship of Professor Karen Sliwa, the Hatter Institute for Cardiovascular Research in Africa (HICRA) has been expanded to encompass more clinical research. Our focus is (1) to investigate cardiac disease interlinked with pregnancy (Cardiac Disease and Maternity Group); (2) to undertake African population studies with a focus on translational research (Heart of Africa studies); (3) to develop awareness projects linked to health education in South Africa and Africa (HeDU-Africa), (4) to study the mechanisms of protecting the heart against insults such as lack of blood flow (Cardiac Protection Group) and (5) the genetic basis of cardiomyopathy and other forms of heart disease (Cardiovascular Genetics Group).

Our major goal is to deliver first-class internationally competitive research on the pathogenesis, treatment and prevention of heart disease in Africa. We have set ourselves the goal of taking a dual approach to heart disease research; at the molecular-cellular level and at the population epidemiological level.

Our vision is to facilitate national and international collaborations in its fields of expertise. In order to achieve research excellence we strive to produce work that is published in high impact factor journals and is of relevance to the society in which we live.

HICRA trains a number of Honours, Master’s and PhD students in cardio-protection, cardiac signalling, cardiovascular genetics, acute heart failure, pulmonary arterial hypertension and translational preventative research. Several students from other African countries, including Nigeria, Tanzania and Cameroon, are currently undertaking PhD training under the supervision of Professor Karen Sliwa.

THE ALBERTINA AND WALTER SISULU INSTITUTE OF AGEING IN AFRICA/ DIVISION OF GERIATRIC MEDICINE

Head of Division of Geriatric Medicine: Professor M Combrinck

Head of Institute of Ageing in Africa: Dr S. Kalula

Institute Profile

The Albertina and Walter Sisulu Institute of Ageing in Africa (IAA) is a Cross-Disciplinary Group. The IAA represents a coalescence of institute – wide disciplines with a focus on ageing: specifically Geriatric Medicine; Geriatric Neurology; Geriatric Neuropsychology and Old Age Psychiatry. The International Longevity Centre–South Africa is incorporated in the Institute. The vision of the IAA is to be an academic, clinical, research and policy centre of excellence and relevance in Africa. Its mission is to facilitate the delivery of the highest standard of inter-disciplinary, in-context training for health and allied professionals and evidence-based clinical and social care for older people, whilst undertaking appropriate research and audit upon which policy and planning for older persons may be based. The mission is achieved through inter-disciplinary partnerships and teamwork, and human resources development within current legal, ethical and financial constraints. The IAA is a leader in the area of research on ageing in sub-Saharan Africa, and enjoys international recognition and acclaim.

Research Fields and Staff

DR SEBASTIANA KALULA
Epidemiology of dementia; falls; quality of care.

DR LINDA DE VILLIERS
Stroke risk factors and rehabilitation; post-discharge stroke community care.

PROFESSOR MARC COMBRINCK
Neuro-inflammation and mechanisms of neuro-degeneration with specific reference to cognitive impairment in the elderly and in HIV-associated encephalopathy.

DR KEVIN G.F. THOMAS
Senior Lecturer, Department of Psychology: geriatric neuropsychology; dementia; impact of stress on memory; impact of life stressors on age-related cognitive decline.

ASSOCIATE PROFESSOR JOHN A. JOSKA
Senior Lecturer, Division of Neuropsychiatry, Department of Psychiatry and Mental Health: neurocognitive disorders in HIV infection.

DIVISION OF NEPHROLOGY AND HYPERTENSION

Heads of Division: Associate Professor B.L. Rayner

Divisional Profile

Currently the new division offers a wide range of clinical services including chronic and acute dialysis, renal transplantation, assessment and treatment of a broad range of kidney disease and resistant hypertension, 24 blood pressure monitoring renal biopsies, prevention of chronic kidney, and cardiovascular risk assessment. The unit is supported by a dedicated team of transplant surgeons. Treatment is offered to both private and indigent patients. It also offers outreach programmes to Khayelitsha Community Health Centre and GF Jooste Hospital locally, and to George Hospital, the Northern and Eastern Cape.

There is active training programme for senior registrars in Nephrology and the unit is currently training 6 nephrology fellows. The division supports the Department of Medicine training of medical students, specialist physicians, professions’ allied to medicine, renal technologists and the nephrology course for nurses.

The main academic research activities of the division relate to:
1. Vitamin D and outcomes in SLE
2. Systemic lupus erythematosus (SLE) registry
3. Genetics of salt sensitive hypertension
4. Diabetic nephropathy and treatment of type 2 diabetes
5. Classification, genetics, prevalence and treatment of HIV associated nephropathy
6. Renal anaemia
7. HIV associated nephropathy and chronic diseases of lifestyle
8. Tenofovir nephrotoxicity
9. Physiological treatment of hypertension in indigenous people
10. Ethical consideration for dialysis rationing
11. Prevalence and outcome of AKI
12. Assessment of adherence to anti-hypertensive treatment through drug monitoring
13. Mesangiocapillary glomerulonephritis
14. CAPD registry
15. Association of the use of TIK with hypertension and CKD
16. Epidemiology of membranous nephropathy
17. Renal denervation for resistant hypertension
18. Renal denervation for hypertension in transplant patients
19. Comparison of FGF23 blood levels in CKD patients on HD. Could differences in levels explain the vascular calcification preponderance in non-blacks?
20. Myocardial imaging in HD patients
21. Rapidly progressive glomerulonephritis
22. Diagnosis of Renal Tb in HIV-ve patients
23. Assessment of AV fistulas using MRI scanning

**DIVISION OF LIPIDOLOGY**

**Head of Division: Dr. D. Blom**

**Divisional Profile**

Lipidology at UCT is currently spread over two Departments. The Department of Medicine houses the Division of Lipidology (Head: Dr. D. Blom) while the Lipid Laboratory is located within the Division of Chemical Pathology (Head: Professor A.D. Marais) in the Department of Clinical Laboratory Sciences. The two components of Lipidology co-operate very closely in the investigation and management of patients. The Division of Lipidology in the Department of Medicine performs the following functions within the limits of funding, staff and facilities: expert clinical consultation, clinical research including drug development studies with the pharmaceutical industry, and ultrasonography for assessment of carotid intima media thickness. The Lipid laboratory provides specialized diagnostic investigations including determination of lipoprotein particle size by non-denaturing gradient gel electrophoresis, ultracentrifugation and analysis of VLDL composition for the diagnosis of dysbetalipoproteinaemia and genotyping to detect mutations in the LDL-receptor, apolipoproteinE and lipoprotein lipase. More specialized investigations such as measurement of 7-dehydrocholesterol for the diagnosis of Smith-Lemli-Opitz syndrome, measurement of plant sterols for the diagnosis of sitosterolemia, cell culture and analysis of other genes are performed as required. The staff, service and research are funded chiefly by contract research. The Lipid Laboratory receives limited support from the Medical research Council. The clinical research describes the severe dyslipidaemias occurring in the public health sector of the province but includes some referrals from the private sector and academic institutions in the country. Pharmaceutical studies investigate novel lipid modifying agents in severe hypercholesterolaemia, management of severe hypertriglyceridaemia, novel anti-diabetic therapies and studies of cardiovascular outcome with novel agents.

DIVISION OF NEUROLOGY

Head of Division: Associate Professor Alan Bryer

Divisional Profile
We operate a general clinical neurology service at Groote Schuur Hospital. This provides a comprehensive range of clinical activities, including in-patient, consultative, and emergency services. Additionally, there is a clinical neurophysiology laboratory and a dedicated acute stroke unit, as well as specialised clinics for stroke, myasthenia gravis, HIV neurology, neurogenetic disorders, dystonia, and epilepsy.

Areas of research include:

Stroke: Clinical and laboratory based research projects are focussing on causes of stroke in young persons. A longitudinal study of HIV-associated stroke to evaluate the underlying biological mechanisms (specifically endothelial dysfunction and ultrasonographic vascular phenotypes) was commenced in 2010 and continues to date. Our unit is developing an in-service training program for health care workers involved in stroke care in under-resourced settings. The pilot module has been completed and tested for efficacy with favourable result and currently funds are being secured to produce the remaining 9 modules.

Myasthenia gravis (MG): Clinical and Laboratory-based research projects are focussing on improving therapeutic strategies and increasing understanding of disease pathogenesis. These include the following:

1. Dr C Freeman was awarded a MMed (Psych) for the dissertation: Psychiatric manifestations in thymomatous vs. non-thymomatous MG patients. Prof Heckmann was the principal supervisor.
2. Ms J Auret was awarded MSc (Cell Biol) for her work in examining the effect which standard MG therapies have on DAF (CD55) expression and the implications for MG subjects. Principal investigator: Prof Heckmann was the principal supervisor.
3. TGFb polymorphisms and their association with extraocular muscle damage in MG are being studied; Dr M Nel (MRC award) and Dr R Rautenbach (Discovery award).

HIV/AIDS: Clinical and Laboratory-based research projects have been established to investigate the risk factors for developing neuropathy complications in HIV-infected subjects.

1. Dr J van der Watt, was awarded a PhD for the thesis entitled: HIV-associated sensory neuropathy in an African cohort; a longitudinal study of risk factors predisposing to antiretroviral induced painful neuropathy. Aspects of this work was recently published in BMC Infect Dis February 2014.
2. Dr C Centner was awarded a MSc (Medicine) for his work on Pyridoxine and NAT-2 genotypes as risk factors for TB-HIV-associated neuropathy. The work was published in the IJTBLD January 2014.

Dementia: Prof Marc Combrinck, NRF Chair in Clinical Neurosciences, Divisions of Neurology and Geriatric Medicine.

Research projects:

1. The role of systemic inflammation and the apolipoprotein E gene in human immunodeficiency virus-associated cognitive impairment (MSc Med student, Dr Elana van Brakel, thesis completed and to be submitted February 2014).
2. The association between physical neurological signs and cognitive impairment in young adults with newly diagnosed Human Immunodeficiency Virus infection (MSc student, Dr Harshadh Jeena).
3. The relationship between psychosocial stress, high cortisol, apolipoprotein E4, hippocampal volume and Alzheimer’s disease (Ms Katharine James, graduated PhD Dec 2013).
4. The relationships between inflammation, neuronal loss, the apolipoprotein E genotype and cognition in community-dwelling older persons in the Cape
metropole (Ms Laurian Grace graduated PhD Dec 2013).

5 A prospective, observational cohort study of tuberculous meningitis in adults in Cape Town (study completed, manuscript in preparation. Dr Kathleen Bateman, neurologist).

6 The relationships between Vitamin B12, folate, homocysteine, apoE gene and cognition in older South Africans. Dr Ilhaam Mohamed, MSc Med student, thesis completed and to be submitted Feb 2014.

7 The role Von Willebrandt Factor and its cleaving enzyme ADAMTS13 in HIV associated stroke. Dr Sameera Allie, MSc Med passed with distinction June 2013. Manuscript in preparation

8 A folder review of cases of motor neurone disease seen at Groote Schuur Hospital 2005 to 2010. Dr Amina Daude, MMed part 3, thesis completed to be submitted 2014

Epilepsy: The Neurology Unit plans to construct a web-based distance neurophysiology course for training in electroencephalography (EEG). To this end, approximately R500,000-00 has been raised to date from the World Federation of Neurology, the International League Against Epilepsy and the Neurological Association of South Africa. It is anticipated that the majority of sub-Saharan career neurology registrars will enroll for the 6-month course and that the programme will be up and running by January 2014 and will be tested for efficacy.

Multi-media teaching: The use of clinical encounter simulations is currently being developed by Dr Lee-Pan in collaboration with Dr Rachel Weiss.

Grants:

MRC SELF-INITIATED GRANT 2013-2015 (PROF COMBRINCK)
NRF research Chair in Clinical Neurosciences (Prof M Combrinck)
UCT top-up grant (Prof Heckmann)
Post-internship MRC fellowship (M Nel)
Discovery fellowships (R Rautenbach; C Albertyn)

Research Fields and Staff

ASSOCIATE PROFESSOR A. BRYER
Cerebrovascular Disease; neuro-genetics.

ASSOCIATE PROFESSOR J. HECKMANN
Myasthenia gravis; HIV neurological disease, HIV neuropathy, neuro-immunology, neuro-genetics.

DR E. LEE PAN
Health systems information technology; multi-media teaching.

DR L TUCKER
Epilepsy.

DR BATEMAN
Infectious Disease Neurology, TBM, HIV peripheral nervous disease, Stroke

DEPARTMENT OF
OBSTETRICS AND
GYNAECOLOGY

Head of Department:
Professor Lynette Denny

Departmental Profile

Our Mission Statement

• To provide high quality care to all women seeking our services
• To foster a climate of intellectual enquiry
• To pursue excellence in research at every level of care
• To help create a world-class African University

Research is predominantly clinical and largely aligned with our four sub-specialist areas: feto-maternal medicine, gynaecological oncology, reproductive medicine and urogynaecology. Research is conducted at all levels of care and comprises participation in large, international, collaborative trials, cutting edge national research projects, self-initiated local and collaborative studies, as well as smaller individual projects. Several important clinical data bases have been established which provide valuable information in maternal medicine, gynaec oncology and reproductive medicine. In addition, our Undergraduate Teaching Unit is actively engaged in education research. Research supervision is provided at the level of MMed and MPhil dissertations and PhD theses to registrars, sub-specialist trainees and staff.

Obtaining an MMed has become a compulsory requirement by the HPCSA for specialist registration, which has greatly increased the need for research supervisors. Our Department has 25 funded registrars in specialist training and 13 supernumerary registrars (all self funded), the majority of whom are non-South African from Malawi, Botswana, Uganda and Zimbabwe.

Research fields and staff

PROFESSOR LYNETTE DENNY
Cervical cancer: prevention in low-resource settings; natural history; precursors in HIV positive women. Other gynaecological cancers: management of endometrial, ovarian cancer and advanced vulval cancer. HPV: prevalence, types; vaccination, DNA typing.

PROFESSOR SUSAN FAWCUS
Maternal mortality; Perinatal mortality; Intrapartum asphyxia; Magnesium supplementation in pregnancy; Better Birthing Initiative. Calcium and pre-eclampsia trial, co-investigator Associate Professor John Anthony.
Obstetric haemorrhage pilot project. Multicentre collaborative study. Co-investigator Associate Professor J Anthony.

PROFESSOR ZEPHNE VAN DER SPUY
Contraceptive and interceptive development; Polycystic ovary syndrome; Reproductive failure; Endocrine dysfunction in pregnancy; Menopause; Nutrition and reproductive health; Genetics of benign gynaecological conditions.

ASSOCIATE PROFESSOR JOHN ANTHONY
Thrombophilia; Eclampsia; Bioethics.

PROFESSOR SILKE DYER
Infertility: health-services in low-resource settings, psychosocial consequences, quality of life, HIV.

ASSOCIATE PROFESSOR PETRUS STEYN
Fertility Regulation and Reproductive Health, Development of Sexuality Education.

ASSOCIATE PROFESSOR ATHOL KENT
Medical education: Reproducible assessment procedures.

DR SAADIQA ALLIE
Obstetric hysterectomy; Teenage pregnancy.

DR ANNE HORAK
High risk obstetrics; Fetal cardiac abnormalities.

DR STEPHEN JEFFERY
Refractory overactive bladder syndrome: treatment, epidemiology; HIV and obstetric pelvic floor trauma; surgical repair of posterior compartment prolapse; interdisciplinary patient care;

DR LYNELLE KENNETH
IUCD in HIV pos women

DR MUSHI MATJILA
Fetal Anomalies: Antenatal Pyelectasis; Reproductive endocrinology in normal and abnormal pregnancies. PhD thesis (in process): “The role of Kisspeptin and cognate receptor GPR 54 in placentation”.

DR NOMONDE MBATANI
Uterine sarcomas: outcome of treatment; Treatment outcome and complications of gynaecological malignancy.

DR VANESSA PERROTT
Medical education.

DR GREG PETRO
Clinical epidemiology; Haemorrhage and transfusion in the obstetric patient; Termination of pregnancy.

DR LINDA ROGERS
Vulval cancer, MRI Imaging in endometrial and cervical cancer, optimal management of early stage cervical cancer, outcome of ovarian cancer in developing countries.

DR LEANN SCHOEMAN
High-risk obstetrics; Audit of clinical obstetric management; cardiac disease in pregnancy.

DR VALENTIN STEFAN
Haemorrhage and transfusion in the obstetric patient.

DR CHANTAL STEWART
Fetal medicine; Women’s expectations of and attitudes to fetal anomaly scans; Preterm labour; Ultrasound screening for risk of pregnancy complications.

DR HETTA VAN ZYL
Pre-eclampsia, eclampsia and complications; High risk obstetrics; Laparoscopic surgery; Caesarian section: prevalence and outcome.

DR LINDA WALMSLEY
Infertility: Quality of life, HIV

Sub-speciality trainees

DR DOMINIC RICHARDS: GYNAECOLOGICAL ONCOLOGY
DR KAMENDRAN GOVENDER: GYNAECOLOGICAL ONCOLOGY
DR CATHERINE ELLIOTT: MATERNAL AND FETAL MEDICINE
DR TEOGO DEO: REPRODUCTIVE MEDICINE (PART-TIME)
DR NURU NKINTO: REPRODUCTIVE MEDICINE (PART-TIME)
DR L WALMSLEY: REPRODUCTIVE MEDICINE

Registered PhD Students

DR MALIKA PATEL
DR RAKIYA SAIDU

TEACHING

Undergraduate

In 2013 there were 1229 students registered in the Faculty of Health Sciences over the 6 years of the MBChB course. The Department of Obstetrics & Gynaecology was responsible for tuition in Years 3, 4, 5 and 6 in both Obstetrics and Gynaecology.

Thus during 2013 approximately 800 students were taught by the O&G Department.

DEPARTMENT OF PAEDIATRICS AND CHILD HEALTH

The Department of Paediatrics and Child Health is a large department in the Faculty of Health Sciences, encompassing the field of general paediatrics as well as a full spectrum of paediatric medical subspecialties. Other disciplines affiliated with the Department make up the School of Child and Adolescent Health. The Department provides clinical services at the Red Cross War Memorial Children’s Hospital, Groote Schuur Hospital, Somerset Hospital, Mowbray Maternity and Victoria Hospital. These venues also provide the major teaching and training sites for undergraduate and postgraduate training in Paediatrics and Child Health. All paediatric registrars are now required to register for a MMed degree as part of their training.

The department has a wide breadth of clinical research activities with a substantial research output especially in the areas of priority child health problems such as tuberculosis, pneumonia, infectious diseases and HIV. In 2013, a new, expanded clinical research unit, the Research Centre for Adolescent and Child Health (REACH) was opened at Red Cross War Memorial Children’s Hospital, as the existing unit had been outgrown. Current studies located in REACH include studies of childhood pneumonia, diarrhoea, pertussis, paediatric TB and of HIV-associated illness. There are approximately 30 staff members located in REACH, funded on grant support, mainly awarded by international funding agencies including the National Institute of Health (NIH) USA, Wellcome Trust, Global Alliance for Vaccines and Immunisation(GAVI) and the Gates Foundation. REACH serves as a central hub supporting satellite clinical research sites in secondary and community based facilities. A unique birth cohort study, the Drakenstein Child Lung Health study funded by the Gates Foundation, to investigate the early life determinants of child health is now well established in Paarl; this study involves collaborations across a number of departments in the Faculty of Health Sciences and with several international collaborators. There are 3 NRF rated researchers in the Department including one A-Rated person.

Professor and Head of Department: Professor Heather Zar

General Paediatrics

- Emergency Unit
- Inpatient unit

Subspecialties:

- Adolescent Medicine
- Allergy
- Cardiology
- Critical Care
- Endocrine
- GIT
- Haematology/Oncology
- Infectious Diseases
- Neonatology
- Nephrology
- Neurodevelopment
- Neurology
- Pulmonology

Research Fields and Staff

J. AHRENS
Experience of the pandemic (H1N1) influenza A at Red Cross Hospital ICU in 2009; Analysis of referrals to the Paediatric ICU, Red Cross children’s Hospital, over 6 months in 2008

A.C. ARGENT
Respiratory mechanics in croup; respiratory mechanics and endotracheal suctioning; electrical impedance tomography and respiratory disease in the PICU; care practices and inter-personal relationships in ICU; quality of care and safety in the PICU; management of traumatic brain injury in PICU; HIV in the PICU; fluids in the critically ill; prevention of nosocomial infections including ventilator associated pneumonia and central line sepsis; viral infections in the PICU; cardiomyopathy / myocarditis in children; ethical issues in resource allocation in the PICU; severe sepsis and septic shock; “Pathways to care” for critically ill children; training and simulation training for healthcare workers working with critically ill or injured children.

H. BARLOW
Nurses and Care.

C. BONACONSA
Paediatric stabilization in critical care; ethnography

H. BUYS
Ambulatory, emergency and outreach care; paediatric HIV disease and nutrition; diarrhoeal disease.

M. CARRIHILL
Type 1 diabetes in the South African youth; Neonatal screening programmes; Disorders of sex development.

M COETZEE
Improvement science in clinical paediatrics; models of paediatric nursing care; participative approaches – postgraduate curriculum development and clinical practice development

G COMITIS
Kawasaki disease; Myocarditis / dilated cardiomyopathy; Cardiac CT angiography; Post-operative outcomes in AVSD repairs, systemic to pulmonary shunts, Tetralogy repairs; Cardiac MRI (in future); Interventional catheterizations especially aortic coarctation and pulmonary artery stenting; Electrophysiology studies and ablations; Transvenous pacemakers

ML COOKE
General paediatrics and gastroenterology

A. DAVIDSON
HIV-related malignancy; Brain tumours; the impact of ethnicity on ALL outcomes; Stem Cell Transplantation for Immunodeficiency.

C. DAVIS
Paediatric critical care, nurse to nurse communication and the action research methodology

R. DE DECKER
The 22q11.2 deletion syndrome; Warfarin: implementation and impact; Genetic associations of congenital heart disease.

R. DE LACY
Cystic fibrosis; gastroenterology.

S. DELPORT
Abnormalities of growth; abnormal pubertal development; advances in diabetes care.

R. DIEDERICKS
Emergency paediatrics; Infectious Diseases.

K. DONALD
Developmental disabilities as they manifest and are managed in resource limited settings such as South Africa (including Cerebral palsy, Autism, Intellectual disability, genetic syndromes). Specific interests include the preventable causes of neurodisability such as alcohol and methamphetamine exposure, organophosphate poisoning and the neurological and neurocognitive complications of HIV.
R. DUNKLEY
Learning from mortality; improving flow and bed management in the hospital to cope with the Surge season

B.S. ELEY
Primary immune deficiency disorders; paediatric tuberculosis; paediatric HIV/AIDS; paediatric infectious disease.

P. GAJJAR
Renal disease; paediatric organ transplantation especially infectious complications; paediatric hypertension including Takayasu’s Arteritis; acute renal failure and peritoneal dialysis; paediatric HIV nephropathy; adolescent medicine.

E. GODDARD
Paediatric liver disease; transplantation in children; immunology; paediatric infectious disease; paediatric gastroenterology and nutrition.

C. GRAY
Food allergies and eczema

M. HARRISON
Preterm outcomes; Neonatal respiratory disease; Hypoxic Ischaemic Encephalopathy.

M. HENDRICKS
Clinical Outcomes in children with rhabdomyosarcoma at Red Cross Children’s Hospital.

M.K. HENDRICKS
Public health nutrition; children’s rights; community child health

I. HENDRY
Post-graduate education; clinical nursing research and forensic nursing

L. HENLEY
Research ethics

J. HEWITSON
Resource allocation and cardiovascular disease; Trisomy 21 and cardiovascular disease; surgical management of patients with a single ventricle.

A. HORN
Epidemiology; assessment and management of Hypoxic Ischaemic Encephalopathy.

Y. JOOLAY
Neonatology

M. KIBEL
Child Health generally (Community Paediatrics), and Childhood TB

S.M. KROON
Mother-to-child transmission of HIV; Human Milk Banking

A. LEONARD
Implementation research (evidence based practice and improvement research)

M. LEVIN
Genotypic and phenotypic features of allergic Xhosa children; Prevalence and associations of food allergy in unselected children in Cape Town and in the Eastern Cape; relationship between food allergy and atopic dermatitis; the impact of demographic, environmental, nutritional and infectious influences on the expression of allergy and atopy within the Drakenstein birth-cohort study; allergy and atopy in children with Vernal Keratoconjunctivitis; communication issues in management of asthma and allergy in indigenous people in South Africa.

J. LAWRENSON
Developing standards for echocardiographic screening of individuals to detect subclinical rheumatic heart disease; Thoracopagus conjoined twins; Cardiovascular disease in patients with HIV disease.

L. LINLEY
Kangaroo mother care; HIE and the effect of head cooling; ethical issues in neonatal care.

M. MCCULLOCH
Acute kidney injury especially in PICU setting; Acute Peritoneal dialysis in Children and Infants; Fluid management in Emergency and PICU settings; Transplantation(Renal, Liver and Cardiac) as well as Development of Paediatric Transplantation programmes and Young Adult Transition; Long-term follow-up of steroid withdrawal in transplantation; Takayasu’s arteritis; Atypical hemolytic uremic syndrome; Training of African Fellows in PICU/Nephrology and Challenges faced on return home.

G. MOLLER
Neonatal jaundice

B. MORROW
Paediatric respiratory infections; nosocomial infections in the PICU; distribution of ventilation in children with and without lung disease; respiratory mechanics; cystic fibrosis; resource allocation in PICU; paediatric cardiopulmonary physiotherapy.

R. MULOIWA
Pertussis in children hospitalised with Lower Respiratory Tract Infection (LRTI).
S. NAIDOO
Aeroallergen sensitisation and the prevalence of asthma, allergic rhinitis, and eczema in children with Vernal Keratoconjunctivitis.

A. NDONDO
Hydatid disease of the spine; epilepsies in childhood; neurometabolic disorders; the ketogenic diet in the African context; Rett syndrome; optimal management of refractory status; non-polio enterovirus infections; childhood stroke.

P. NOURSE
Peritoneal dialysis; glomerulonephritis including HIV.

J. NUTTALL
Infants, children and adolescents with HIV infection and HIV/TB co-infection including early infant diagnosis; performance of HIV rapid tests in young children; drug dosing and pharmacokinetics; treatment failure and drug resistance. Antimicrobial stewardship.

R. PETERSEN
CEREBRAL PALSY.

M.S. RABAN
Neonatology

V. RAMANJAM
Phenotype, neuroimaging and neurocognitive characteristics of children with neurofibromatosis type 1; DAX1 mutation; investigating the prevalence, comorbidities and responses to different forms of medical therapy for children and adolescents with ADHD.

M. RICHARDS
General and Developmental medicine

G. RIORDAN
Paediatric epilepsy; ADHD; mitochondrial disease; juvenile Huntingtons disease

B. ROSSOUW
Cardiac critical care: dilated cardiomyopathy in RCWMCH PICU; AlCAPA in RCWMCH PICU

P. ROUX
Early Childhood Development and psycho-social aspects of care for children and adolescents with HIV/AIDS.

S. SALIE
Sepsis, HIV and fluid resuscitation.

B. SCHLEGEL
Tubercous sclerosis.

C. SCOTT
Paediatric Systemic Lupus Erythematosus; Juvenile Idiopathic Arthritis; Fibrodyplasia Ossificans Progressiva; HIV Arthropathy; Juvenile Dermatomyositis and Childrens Rights

A. SPITAELS
Paediatric endocrinology, metabolism and diabetes; social circumstances, diabetes control, intersex.

G. SWINGLER
Systemic literature reviews.

C. THOMSON
Follow-up of the high risk infant; HIE and the effect of head cooling

L. TOOKE
Neonatal research especially congenital infections, HIV and the care of the VLBW.

A. (NIKI) VAN NIEKERK
Neonatology and Neonatal cardiology.

A VAN EYSSEN
Pharmacogenomics in patients treated at Red Cross Hospital with Acute Lymphoblastic Leukaemia; the use of flow cytometry in evaluating minimal residual disease in B Lineage Acute Lymphoblastic Leukaemia at Red Cross Hospital.( In conjunction with Dr W Van Schalkwyk of the NHLS)

A. VANKER
Indoor air pollution and tobacco smoke exposure and the effects on lung health. Determinants of childhood pneumonia.

K. WALKER
Sydenham’s chorea: post streptococcal movement disorders. Point of care INr testing. Cardiac management of Duchenne’s Muscular Dystrophy. HIV encephalopathy and HIV associated neurocognitive deficits in children. Use of Methylphenidate and management of ADHD in HIV.

K. WEBB
Paediatric rheumatology and immunology

A.T. WESTWOOD
Coordination of health services; quality of health care; Epidemiology, diagnosis and management of cystic fibrosis in South Africa; management of acute diarrhoea; causes of death among children; epidemiology of chronic illness in South Africa; health systems for children with long-term health conditions; policy perspectives on children with long term health conditions.

P. WICOMB
Medical Education
J. WILMSHURST
Spinal muscular atrophy; limb girdle muscular dystrophy; peripheral neuropathies; congenital myopathies; complex epilepsy in childhood; role of video telemetry in paediatric neurology practice; neurofibromatosis; paediatric spinal pathologies; neuroradiological diagnostic and prognostic indicators of TBM, neurological manifestations of HIV; rare neuromuscular disorders; tuberous sclerosis; ketogenic diet in epilepsy; child neurology training in Africa; child neurology service capacity in Africa; guidelines for management of epilepsy disorders (for the ILAE).

M. ZAMPOLI
Childhood respiratory infections; HIV-associated lung disease; Cystic fibrosis; respiratory manifestations of neuromuscular disease and Sleep medicine.

H. ZAR
Childhood TB (specifically new diagnostic strategies), childhood pneumonia, HIV-associated lung disease; childhood asthma. Drakenstein child lung health study, a birth cohort study to investigate the antenatal and early life determinants of child health

DEPARTMENT OF PAEDIATRICS AND CHILD HEALTH

AFFILIATED DISCIPLINES:

ALLIED HEALTH SCIENCES

Unit Representative: Sameer Rahim

Manager [Head of Unit] of Allied Health Professionals: Dr T Blake

HOD of each department:
- Dietetics: Shihaam Cader
- Occupational Therapy: Mereille Pursad
- Physiotherapy: Sameer Rahim
- Audiology: Colleen Cox
- Social Worker: Andre Pieters
- Speech Therapy: Lezanne LeRoux

Unit Profile
The Unit of Associated Paediatric Disciplines is multidisciplinary, including all the paediatric therapy professions of Physiotherapy, Occupational Therapy, Dietetics/Nutrition, Speech Therapy, Audiology and Social Work. The Division undertakes undergraduate and postgraduate teaching and training in all aspects of paediatric care, both acute and chronic. The Division is active in conducting research in Paediatric fields, often collaborating with members of other Divisions. The individual departments also run departmental weekly and monthly CPD programs accredited by UCT.

Research Fields and Staff

LEZANNE LE ROUX (SPEECH THERAPY)
The Nature of Feeding and Swallowing Difficulties in the Paediatric Cerebral Palsy Population Who Have Had Videofluoroscopic Swallow Studies. (Completing in 2014)

SHAFEEQAH NANA (SPEECH THERAPY)
Master’s in Early Communication Intervention (course work)- Univ of Pretoria (commenced 2014)

Physiotherapy

The epidemiology of children with Cerebral Palsy attending the physiotherapy department and the Western Province Cerebral Palsy Association (WPCPA) Cerebral Palsy (CP) Clinic at Red Cross War Memorial Children’s Hospital over three months.

DES SCOTT (PHYSIOTHERAPY)

JANINE VERSTRAETE (PHYSIOTHERAPY)
MSc Physiotherapy: Development of an English Health Related Quality of Life measure, for children under the age of 6, to be completed by proxy

LIESELOTTE CORTEN (PHYSIOTHERAPY PHD STUDENT)
The use of Assisted Autogenic Drainage in children with acute respiratory disease in a developing country.

SHIHAAM CADER [IN COLLABORATION WITH EDWARD KIJA FROM NEUROLOGY]
Bone metabolism abnormalities in children with Epilepsy at Red Cross War Memorial Children’s Hospital, Capetown South Africa.(commence 2014)

DEPARTMENT OF CHILD AND ADOLESCENT PSYCHIATRY

Head of Clinical Unit: Dr Wendy Vogel

Academic Lead: Prof Petrus de Vries

Unit Profile

The Division of Child & Adolescent Psychiatry (DCAP), is based at 46 Sawkins Road, Rondebosch, and is part of the Department of Psychiatry and Mental Health. Clinical services are rendered as part of Red Cross War Memorial Children’s Hospital. As such, DCAP therefore works in close collaboration between the departments of Psychiatry and Paediatrics. The clinical services are offered by four main teams: an Outpatient Team, a Consultation-Liaison Team, an Infant Mental Health Team and by the Therapeutic Learning Centre (TLC), an in-patient unit for children under 13 years. The Division is very active in training across disciplines, ranging from medical students, psychiatric registrars (M.Med) to advanced nursing students and clinical psychology interns. The Division offers a two-year M. Phil. (Child and Adolescent Psychiatry) degree, which leads to registration with the HPCSA as a sub-specialist in Child and Adolescent Psychiatry. In addition, staff members in the Division supervise candidates for postgraduate degrees such as Master’s and Doctoral degrees.

Research at DCAP is organised around five main themes:

a) Centre for Autism in Africa – an interdisciplinary, interfaculty research group with interest in building a research base for research about autism in Africa. Activities include tool development, translation, validation, training and involvement with NPO sector. (Steering group: Prof Petrus de Vries, Dr Wendy Vogel, Dr Kirsty Donald, Prof Colleen Adnams, Dr Susan Malcolm-Smith, Dr Colleen O’Ryan, Dr Nokuthula Shabalala, Michelle Hoogenhout)

b) Adolescent Health Research Unit – a UCT-accredited research unit with specific focus on health and health promotion in adolescents. Activities include a large-scale community education programme to reduce risk behaviours and intimate partner violence in 12-14 year olds in the Western Cape Province (Director: Prof Petrus de Vries; Co-director: A/Prof Cathy Mathews)

c) Tuberous Sclerosis Complex Research Programme – an international research programme, specifically focusing on molecularly targeted treatments of TSC and the neuropsychiatry of TSC. Recent activities included development and validation of a checklist for the neuropsychiatric manifestations of the disorder (Head: Prof Petrus de Vries).
d) Infant Mental Health Programme – A developmental research programme of parent-infant mental health work focusing on mentalisation and mentalisation-based interventions for high-risk families (Head: A/Prof Astrid Berg)
e) DCAP Research Development Programme – a staff research development programme. Activities include research development workshops, writing workshops and research capacity building in existing staff (Lead: Prof Petrus de Vries)

DEPARTMENT OF PAEDIATRICS AND CHILD HEALTH

AFFILIATED DISCIPLINES:

CHILD HEALTH UNIT

Director: Rotating Acting Head

Unit Profile

The Child Health Unit’s mission is to contribute to promoting equity in child health. The core business of the Unit is directed at children’s public health and community-oriented child health promotion, protection, care and rehabilitation.

The target of the Unit’s endeavours is those areas, which have a strong children’s public health and interdisciplinary focus, viz. child development and disability, community nutrition, infectious diseases and health policy and service development. The Unit has close links with the Children’s Institute.

J. SHEA

Health promotion and education; the adaptation and piloting of a behavioural intervention to support HIV+ women in the core domains of health, mental health, parenting and HIV prevention for use by non-governmental organizations; an assessment of the feasibility of intervention trials on tuberculosis prevention in schools in the Western Cape Province; development of a certificate course in clinical research.
CHILDREN’S INSTITUTE

Director: Associate Prof. Shanaaz Mathews

Institute Profile

The Children’s Institute aims to contribute knowledge and understanding to promotion of policies which govern improvement of child well-being, and fulfillment of the rights of all South Africa's children, with special emphasis on children rendered vulnerable by a range of difficult circumstances. It addresses the needs and rights of South Africa’s children through policy research, advocacy and education and other academic activities that contribute to improvement in the policy analysis, formulation, implementation and evaluation processes.

Research Fields and Staff

ASSOCIATE PROFESSOR SHANAAZ MATHEWS
Director; Children & violence, child protection, child abuse, gender policy, gender-based violence, evidence-based programming.

LIZETTE BERRY
Senior researcher; Child socio-economic rights indicators; child poverty.

DR ARIANE DE LANNONY
Senior researcher; Youth and youth identity in rapidly changing urban environments; Perceptions of opportunity structure; Education, identity and educational decision-making.

KATHARINE HALL
Senior researcher; social policy; Child poverty and inequality; social grants; households and mobility; indicators

LUCY JAMIESON
Senior advocacy co-ordinator; Child rights; participatory democracy; governance; law reform & policy development; child protection.

HELEN MEINTJES
Senior Researcher; HIV/AIDS & children; alternative care; social policy; children's participation; media

DR TENDAI NHENGA-CHAKARISA
Senior researcher; International law; human rights law; child rights; child labour; applying international children's rights law in African cultural contexts; curriculum design & legal drafting.

PAULA PROUDLOCK
Programme manager; Child rights; legislative review; law reform; democracy & governance; socio-economic rights for children.

WINNIE SAMBU
Researcher; Malnutrition; food security; urban environments; poverty

PAEDIATRIC ANAESTHESIA

Head of Unit: Associate Professor Jenny Thomas

Unit profile

The Unit of Paediatric Anaesthesia, a division of the Department of Anaesthesia, University of Cape Town and School of Child and Adolescent Health, is responsible for the provision of anaesthesia for all children, infants and adolescents undergoing surgery or procedures at the Red Cross War Memorial Children’s Hospital and Maitland Cottage Children’s Home. This department also provides acute, chronic and palliative care services for the children at this hospital as well as providing input into paediatric intensive care services. The Paediatric Pain Team is a multidisciplinary group of practitioners - some with funded positions, others whom are volunteers - which is anaesthesia-directed and nurse driven. These include SRN Angelina Schrikker (nurse practitioner in...
pain) and a number of other volunteers which include child and family psychotherapists, aroma therapists, music and art therapists. These all work to provide an integrated approach to pain management. Radiotherapy and oncology services are provided at both GSH and RCWMCH when their need arises this should be formalised to provide a more sustainable service.

PROFESSOR JENNY THOMAS
Acute and chronic pain management, palliative care, analgesia and sedation, burns, conjoined twins' anaesthesia, general paediatric surgery, cardiothoracic anaesthesia, perioperative behaviour disorders, and perioperative morbidity and mortality.

DR GRAEME WILSON
Paediatric pharmacology, total intravenous techniques in children, target-controlled anaesthesia, cardiothoracic anaesthesia.

DR REBECCA GARY
Transfusion medicine, vascular access, premature infants, ultrasound applications, cardiac, general paediatric surgery, burns and paediatric simulation.

DR KARMEN KEMP
Cardiac anaesthesia, childhood malignancies, teaching. Dr Kemp is in charge of registrar activities.

DR KOTIE BESTER
Ultrasound and echocardiography applications in paediatric anaesthesia, modalities for analgesia and sedation, interventional radiology and MRI. Dr Bester also has an interest in perioperative morbidity and mortality.

PAEDIATRIC DERMATOLOGY

Head of Unit: Dr Carol Hlela

Unit profile

Dr Carol Hlela is the Head of Paediatric Dermatology at Red Cross Hospital and managing of Adult inpatients and outpatients with varied skin conditions. She is the division’s only consultant that runs the clinical service and is assisted by dermatology registrars from Groote Schuur Hospital for two clinics a week and also two sisters of Red Cross Hospital.

Current Studies

She completed conducting a clinical trial at Red Cross entitled: Accessible and Affordable Moisturizers for Atopic Eczema, the 3AM Atopic Eczema Study. The aim of which is to find easily accessible moisturizers with a view to replace the standard of care regime. The intention of which is to empower patients and reduce the dependence on the health sector for moisturisers. She is also currently conducting her own research in the following areas:

2. Epidemiology of HTLV-1 infection in South Africa, the forgotten epidemic. Carol Hlela, Maia lesosky, Diane Hardie, Ravi Moodley, Edward Murphy. A project conducted in partnership with the national health services laboratory (NHLS).
3. Formulating a National Multicentre Registry of Infective Dermatitis Associated with HTLV-1 (IDH), a collaborative project with the South African Dermatology Society of SA.

Student Supervision

1. Filipe Ferreira de Almeida Rego, PhD student – Africa Centre, KwaZulu Natal Project title: Analysis of HTLV-1 integration sites (IS), proviral load and mutations in pX orf -I and orf-II and infective dermatitis associated with HTLV-1 (IDH) development.
4. Nonhlanhla Lunjani: Department of Dermatology, University of Cape Town. Project title: Mechanisms of Eczema and Allergy Development in Xhosa children

5. Felix Dube, PhD student-Microbiology Department, University of Cape Town. Project title: Human T-cell lymphotropic virus type 1 (HTLV-1) -associated infective dermatitis (IDH) and the risk of adult T cell leukaemia/lymphoma (ATLL)

Project collaborations are with:

Prof Mike Levin from the Department of Allergy, University of Cape Town and the Switzerland based group of investigators including Drs. Akdis, Schmid-Grendelmeier and Weibel working on the research project entitled- Mechanisms of the Development of Allergy (SOS-All), which will aim to generate novel knowledge on the origin of the epidemic of IgE-associated allergic diseases, particularly mechanisms of initiation of allergy to propose early diagnosis, prevention and targets for therapy.

PAEDIATRIC NUCLEAR MEDICINE

Head of Unit: Dr. A. Brink

Unit profile

The Paediatric Nuclear Medicine Service is part of the Department of Paediatric and Child Health. It provides the Nuclear Medicine investigations and therapy for all neonates and children being treated in facilities associated with UCT and supports State and Private Health Care facilities in the Western Cape and other provinces which do not have a dedicated Paediatric Nuclear Medicine Service. In addition, staff actively participate in the Division of Nuclear Medicine at Groote Schuur Hospital.

Registrars from a number of institutions spend time at the Children’s Hospital as part of their training, as do radiography students from Groote Schuur Hospital. Other activities include participation in International Congresses and the College of Nuclear Physicians.

PAEDIATRIC PATHOLOGY

Head of Histopathology Unit: Dr K. Pillay

Unit profile

The Unit of Paediatric Pathology is primarily an NHLS laboratory service unit to Red Cross Children’s Hospital and provides paediatric and neonatal services to other Western Cape Health Care Institutions. The pathology service functions as an amalgam of three sub units comprising: Anatomical Pathology, Chemical Pathology and Haematology. Undergraduate teaching activities are largely undertaken through equivalent disciplines at Groote Schuur Hospital and the Medical School of the University of Cape Town to medical and physiotherapy students. Postgraduate teaching is undertaken to MPhil (Paediatric Pathology), MMed (in all the pathology disciplines), and MSc and PhD students at UCT. Research activities are related to laboratory aspects of child health and molecular mechanisms underlying paediatric disease. Research also undertaken through collaborative projects with clinical colleagues, mainly in paediatrics and paediatric surgery.

PAEDIATRIC RADIOLOGY

Head of Unit: Dr. T. Kilborn

Unit profile

A clinical radiology department providing imaging to all divisions in the School, performing a total of approximately 40,000 examinations per annum. Imaging modalities include plain-film radiography, computed and digital radiography, digital fluoroscopy, ultrasound (including Doppler), computerised tomography (CT), magnetic resonance imaging (MRI), angiography and interventional radiology. The Division conducts a Postgraduate teaching program for three registrars registered for the M.Med (Diagnostic Radiology) at the University of Cape Town on an ongoing rotational basis and for one registrar registered at the University of Stellenbosch. An undergraduate lecture series in paediatric radiology is provided at 5th year level. Training in paediatric sonography is conducted for B.Tech (Ultrasound) students of the Cape Peninsula University of Technology.

In addition, the Division offers an annual Paediatric Radiology Fellowship, providing further training in the discipline for qualified radiologists. Fellows are registered for the University’s Postgraduate Diploma in Paediatric Radiology.

Head of Unit: Prof. A. Numanoğlu

Unit profile

The department functions as a tertiary and quaternary health care centre for paediatric surgery for the University of Cape Town and the Red Cross War Memorial Children’s Hospital. The department is a national/international centre for postgraduate paediatric surgical career development and is accredited with the HPCSA.

An extensive surgical outreach programme is in existence primarily to improve the surgical care of children at secondary and primary health care levels. The division is regarded as a national centre for minimally invasive surgery, surgical skills training, organ transplantation, specialized hepatobiliary surgery, oncology and burn care in children and for the separation of conjoined twins.

Research is being conducted in the department into a wide variety of aspects of paediatric surgical practice including gastrointestinal surgery, minimal invasive surgery, surgical skills training, trauma care and prevention, liver and renal transplantation, renovascular hypertension, burn therapy, pain assessment and management, conjoined twins and common diseases of Africa including tuberculosis and HIV/AIDS.

Research Fields and Staff

PROFESSOR A. NUMANOGLU
Minimal invasive surgery; transplantation; HIV/AIDS and diseases of the gastro-intestinal tract; teaching with technology; web based outreach; neonatal surgery

S. COX
The child sexual assault ‘epidemic’; burns; surgical aspects of necrotising enterocolitis and other childhood general surgical conditions; surgical oncology

PROFESSOR A.B. VAN AS
Traumatology; child accident prevention; vascular injuries

PROFESSOR A.J.W. MILLAR
Biliary atresia, choledochal cysts, liver transplantation, renovascular hypertension, non-transplant surgery for short bowel syndrome, oesophageal replacement with colon, hepatoblastoma, bilateral Wilms’ tumour, surgical management of intestinal failure

EMERITUS PROFESSOR H. -RODE
Burn and nutrition research; short bowel syndrome; HIV/AIDS; oncology and trauma.

ADJUNCT PROFESSOR R.A. BROWN
Gastrointestinal surgery; surgical endoscopy; constipation and gastro-intestinal polyposis.

DR R. ALBERTYN
Paediatric pain; rehabilitation and HIV/AIDS; web-based education

J. RAAD
Manometry and gastro-enterology.

POISONS CENTRE

Head of Unit: Dr C. Roberts

Unit profile

The Poisons Information Centre maintains and distributes the AfriTox poisons information database designed to help clinicians in Southern Africa treat poisoned adults and children. All types of potentially toxic substances are included with a particular accent on local South African trade names and natural toxins. The treatment protocols are tailored for the South African situation. AfriTox is used at over 35 treatment centres countrywide and by both the other Poisons Centres, to underpin poisons advice given to health workers and the public. It is also distributed to centres in Botswana, Kenya, Mozambique, Nigeria and Zimbabwe. AfriTox is also used by doctors on smart phones, laptops and PCs.

The Poisons Emergency Telephone line is answered by the staff of the Poisons Information Centre during office hours on weekdays, and after hours in the Emergency Department of the hospital, using the AfriTox database.

The Centre collects data on all children seen at Red Cross Children's Hospital with known or suspected poisoning and on all calls received during working hours on the Poisons Emergency line.

SOUTH AFRICAN TUBERCULOSIS VACCINE INITIATIVE (SATVI)

Head of Unit: Professor Willem Hanekom

Unit profile

SATVI’s vision is “A World Without TB”, while our mission is “Innovative And High-Quality TB Vaccine Research In Africa, To Impact The Global Epidemic”. To achieve its mission, SATVI has been testing 7 new TB vaccine candidates in 15 completed or ongoing clinical trials. SATVI also addresses other critical clinical, epidemiological, immunological and human genetic questions in TB vaccine development. A large focus of this research is on identification of markers in blood to indicate whether a person is at risk of developing, or protected against, TB disease (correlates of risk or of protection).

SATVI is the largest dedicated TB vaccine research group on the African continent, with an annual budget of ~R70 million. Its success is evident from manuscripts published in high impact journals, funding support from multiple international funding agencies, invited presentations at international conferences and representation on multiple international policy bodies.

SATVI also has an active postgraduate academic training programme, with a total of 13 postdoctoral, doctoral and master’s students.

Particular highlights from 2013 included publication of the results of the first efficacy trial of a new TB vaccine, MVA85A, in nearly 50 years. The group was also awarded two new grants to the value of R 37.4m and R 47.7m from the Bill and Melinda Gates Foundation to identify correlates of risk of TB disease.

Research Staff

**WILLEM HANEKOM – DIRECTOR**
TB vaccine development and testing; Correlates of risk of TB disease in infants, adolescents and adults; Immunopathogenesis of TB and of TB/BCG/IRIS in infants, adolescents and adults.

**MARK HATHERILL – DEPUTY DIRECTOR FOR CLINICAL TRIALS AND EPIDEMIOLOGY**
TB vaccine development and testing; Epidemiology and diagnosis of TB in infants, adolescents and adults.

**THOMAS SCRIBA – DEPUTY DIRECTOR FOR IMMUNOLOGY**
Immunopathogenesis studies; TB vaccine development and testing; Correlates of risk of TB in infants and adolescents; adolescents and adults; Assay development.

**HENNIE GELDENHUYS**
TB vaccine development and testing, including novel administration of vaccines; Epidemiology and diagnosis of TB in infants, adolescents and adults.

**ANGELIQUE LUABEYA**
TB vaccine development and testing; Epidemiology and diagnosis of TB in infants, adolescents and adults.

**MICHELE TAMERIS**
TB vaccine development and testing; Epidemiology and diagnosis of TB in infants and adolescents; Drama as a vehicle for communicating research technology.

**ELISA NEMES**
TB vaccine development and testing; Correlates of risk of TB disease in infants; Immunopathogenesis of TB and of TB/BCG/IRIS in infants, adolescents and adults.

**ADAM PENN-NICHOLSON**
TB vaccine development and testing; Correlates of risk of TB disease in adolescents; Assay development.

**EDWARD MAKGOTHLO**
Correlates of risk of TB disease in adolescents.

**SARA SULIMAN**
TB vaccine development and testing; Correlates of risk of TB disease in adolescents; Assay development.

**HELEN MEARNS**
Analysis of immune responses to novel vaccine strategies against TB.

**VIRGINIE ROZOT**
TB vaccine development and testing; Correlates of risk of TB disease in infants; Immunopathogenesis of TB and of TB/BCG/IRIS in infants, adolescents and adults.

SELECTED RESEARCH GRANTS

SATVI received additional financial support through the following grant awards during 2013:

1. Project: Robin Wood (T. Scriba), Tuberculosis Transmission: Host, Bacterium and Environment
   Funder: MSC SA
   Grant period: 2013 – 2016

2. Project: T. Scriba, T cell determinants of risk for TB disease in adolescents
   Funder: Bill & Melinda Gates Foundation
   Grant period: 2013 – 2016

3. Project: T Scriba, The role of human naive-like memory T cells in natural infection with Mycobacterium tuberculosis
   Funder: MRC SA
   Grant Period: 2013 – 2015

4. Project: T Scriba, CyTOF Mass Cytometer for T cell correlates of risk of TB disease in adolescents
   Funder: SA Department of Science and Technology
   Grant Period: 2013 – 2014

5. Project: Z Brey, Riley Method TB Vaccine Research Facility
   Funder: Bill & Melinda Gates Foundation
   Grant Period: 2013 - 2015

6. Project: M Hatherill, A phase Ib, double-blind, randomised, placebo controlled study to evaluate the efficacy, safety and immunogenicity of GSK Biologicals’ candidate tuberculosis (TB) vaccine GSK 692342 against TB disease, in healthy adults aged 18-50 years, living in a TB endemic region
   Funder: Aeras / GSK
   Grant Period: 2013 – 2017

7. Project: M Hatherill, A double-blind, randomised controlled Phase Ib trial of safety and immunogenicity of MVA85A given for prevention of recurrent tuberculosis
   Funder: National Institutes of Health (NIH)
   Grant Period: 2013 – 2014

8. Project: M Hatherill, A Randomized, Placebo Controlled, Partially Blinded Phase II Study to Evaluate Safety, Immunogenicity, and Prevention of Infection with Mycobacterium tuberculosis of AERAS-404 and BCG Revaccination in Healthy Adolescents
   Funder: Aeras
   Grant Period: 2013 – 2017

9. Project: M Hatherill, UCT Clinical Trials Unit SATVI CRS
   Funder: NIH
   Grant Period: 2013 – 2020
10. Project: M Tameris, Vaccine Development Registry  
Funder: Aeras  
Grant Period: 2013 – 2015

11. Project: M Tameris, A Phase Ib, Randomized, Double-blind, Placebo-controlled, Dose-escalation Study to Evaluate the Safety and Immunogenicity of the ID93 + GLA-SE Vaccine in BCG-Vaccinated Healthy Adults  
Funder: Aeras  
Grant Period: 2013 – 2015

12. Project: A Luabeya, A Phase I/IIa Double-Blind, Randomized, Placebo-Controlled, Dose-Finding Study to evaluate the Safety and Immunogenicity of AERAS-456 in HIV-negative Adults with and without Latent Tuberculosis Infection  
Funder: Aeras  
Grant Period: 2013 – 2015

13. Project: A Luabeya, Host-Based Assessment of MTB  
Funder: University of Washington  
Grant Period: 2013 – 2014

**PRIMARY HEALTH CARE DIRECTORATE**

**Director: Prof Steve Reid**

**Directorate Profile**

The vision of the Primary Health Care Directorate is a Health Science Faculty that promotes equity and quality in health care, guided by the primary health care approach. The Directorate aims to promote the primary health care approach in teaching, research, policy, health services and community engagement by the Faculty of Health Sciences. Its objectives are to integrate a primary health care approach into the faculty’s undergraduate and postgraduate curricula by means of extending and developing the faculty’s clinical teaching platform in rural and primary care sites; deepening community engagement within the health service and the faculty’s curricula; enhancing the recruitment and support of students of rural origin in the faculty; and increasing inter-disciplinary research in health sciences. The mission of the PHC Directorate is to promote equitable, comprehensive, compassionate and quality care at all levels of the health system by means of: the recognition of diversity and culture; evidence-based practice and policy; active health promotion; community-based education; and strategic partnerships.

Honorary Research Associate: Playwriting; theatre, speech, choreography & dance; movement therapy; inter-disciplinary arts research; African dance ethnography; creative arts
rob.baum@uct.ac.za

Research Highlights

Medicine and the Arts: A new postgraduate Medicine and the Arts course which commenced in 2014 was designed by Prof Reid and Dr Susan Levine, Dept of Social Anthropology. The course contributes to new interdisciplinary research initiatives underway at UCT, and provides an unparalleled opportunity for students from the Health Sciences and Humanities to engage with the production of knowledge of and about the body, from multiple perspectives. The course also provides an intellectual platform for students to explore new possibilities, already activated on the global stage, about the ways in which the arts can constructively engage with medical pedagogy and practice, and to engage in key debates relating to medicine, the arts and medical anthropology.

Promoting Rural Health: A portion of a faculty R1.2m Atlantic Philanthropies 3-year grant dispersed to the PHCD was utilized to encourage the recruitment of health sciences students from rural and underserved areas, support them to develop leadership skills, better prepare medical students for rural practice, and contribute overall to health equity. The PHCD worked at raising the profile of rural health amongst the students and faculty; expose an increasing number of students to rural situations via the subsidy provided for 5th year rural electives; raise awareness amongst rural learners about health careers and processes to be followed to become health professionals in future; and expose...
students to leadership through workshops and practice whilst leading their student societies.

Interdisciplinary Work: James Irlam brought together a workshop on Trans-disciplinary and Inter-disciplinary (TDID) Research in the faculty, which has the potential for increasing research output. The statistics from around the world show that the output of those universities that have deliberately created an enabling environment for interdisciplinary research, has increased exponentially, as compared to those who continue ploughing the same furrows within their disciplinary boundaries. Although a lot of the work done at the PHCD is interdisciplinary, this is not the case for most departments, and one of our core functions is to initiate and stimulate this kind of thinking within the faculty.

Curriculum Revision: The faculty-led Curriculum Revision Task Team (CRTT) chaired by Prof Reid met for their final meeting in October 2013 to review what has been achieved since the inception of the Task Team in August 2010, evaluate if the major objectives have been served and to bring clarity to the way forward with respect to salient issues that remain a work-in-progress and will be taken up by the MBChB Programme Committee. Initial revisions to the 4th year curriculum would take effect in 2014 including the introduction of primary care Paediatrics, incorporating additional on-site student clinical work, inclusion of alternative off-campus sites, home visits, and integrating PHC themes and learning outcomes across the curriculum. Revisions to the 6th year curriculum would continue to be interrogated with the aim of exploring the implementation of a longitudinal 6th year programme in George or other community-based off-campus sites on the expanded teaching platform, and interrogating workable models. Task Teams would continue to examine graduate attributes in relation to templates that were designed to identify and integrate PHC threads across the major themes of human rights; inter-professional teamwork; communications & cultural competence; evidence based practice; life-long learning; bio-psychosocial approach; ethics; gender & sexuality (LGBT); SHAWCO Health Proposal; and oral health. The curriculum mapping process which was half-way through, would also be completed. The Culture, Psyche and Illness thread of the MBChB was reviewed leading to a clarification of outcomes and strategies.

Visiting Scholars: Prof Stewart Mennin, an expert in the so-called ‘longitudinal’ model of teaching, in which clinical students undertake their learning in each discipline over a whole year ‘longitudinally’ rather than ‘vertically’ in blocks. The Harvard Medical School Cambridge Integrated Clerkship story has much to say about educational transformation and will be helpful to open ideas about our final year MBChB curriculum revision.

Keikelame, M.J. and Swartz, I. 2013. A lay carer’s story about epilepsy in an urban South African context: they call it an illness of falling or an illness of fitting because a person shakes and eventually falls. Epilepsy & Behavior, 28: 512-518.
DEPARTMENT OF PSYCHIATRY AND MENTAL HEALTH

Head of Department: Professor Dan J. Stein

Departmental Profile

The Department of Psychiatry and Mental Health is firmly committed to strengthening the integration between services, teaching, and research. Clinicians in each of the Divisions of the Department (addiction psychiatry, child and adolescent psychiatry, consultation-liaison psychiatry, forensic psychiatry, general hospital psychiatry, intellectual disability, psychotherapy, neuropsychiatry, psychopharmacology, and public mental health) are active in research in their particular areas. Thus clinical research in the Department covers key clinical problems that are relevant in the South African context, including behavioural and neuropsychiatric aspects of HIV/AIDS, substance use disorders (including fetal alcohol spectrum disorder), adolescent risk-taking behaviour, posttraumatic stress disorder, and mental health policy and services.

In addition, the Department plays a key role in several cross-departmental and cross-institutional research initiatives:

- The Brain-Behaviour Initiative (BBI) is one of UCT’s signature themes. The initial focus of the BBI was on trauma, but it has extended to include neuroHIV and substance use disorders. More details of the aims, methods, and partners, are available at http://www.health.uct.ac.za/research/groupings/bbi/overview/

- The Adolescent Health Research Unit is examining adolescent risk-taking behaviour, predictors of school dropout, and violence in intimate adolescent relationships. Data analysis is in progress for two large school-based cluster randomised control trials of AIDS prevention.

- The Alan J Fisher Centre for Public Mental Health addresses a range of questions in mental health policy and implementation science, and offers advanced training in public mental health. The Centre currently conducts research in 9 low and middle-income countries (EMERALD) research and capacity building initiatives. Within the Centre, The Perinatal Mental Health Project (PMHP) contributes research on maternal mental health from its own service and training initiatives as well as in collaboration with other partners.

Research Fields and Staff

**ADDITION PSYCHIATRY**
Substance use and anxiety disorders (Don Wilson); Interventions (Katherine Sorsdahl, Sonja Pasche)

**CHILD AND ADOLESCENT PSYCHIATRY**
Adolescent risk behaviour (Cathy Mathews), infant mental health (Astrid Berg), autism and pervasive development disorders (Petrus de Vries)

**CONSULTATION-LIAISON PSYCHIATRY**
Women’s mental health, stress and pregnancy (Bavanisha Vythilingum), liaison psychiatry and HIV (Jackie Hoare and Kerry Louw), pain (Louise Frenkel)

**FORENSIC PSYCHIATRY**
Mentally ill offenders and femicide (Sean Kaliski and Tania Swart).

**GENERAL PSYCHIATRY**
mHealth interventions (Pete Milligan), bipolar disorder (Neil Horn), substance-induced psychosis (Henk Temmingh), clinical audit (Robin Allen).
Research highlights from 2013

• Awarding of the Emerging Mental Health systems in low and middle-income countries (EMERALD) EU-FP7 grant (€6,000,000). The grant is being led by Prof Graham Thornicroft at the Institute of Psychiatry, King’s College London, and the UCT CPMH is leading Work Package 3 of the grant, together with Dr Dan Chisholm at the World Health Organization, Geneva.

• Publication of a “flagship” paper for PRIME in PLoS Medicine (December 2012).

SCHOOL OF PUBLIC HEALTH AND FAMILY MEDICINE

Director: Professor Mohamed F Jeebhay

School Profile

The School of Public Health and Family Medicine is a strong multidisciplinary department in the Faculty of Health Sciences. Its teaching, research and service extend to a wide range of settings and content areas consistent with the evolving disciplines of Public Health and Family Medicine.

The School is currently organised into 8 disciplinary teaching and training divisions and 4 URC accredited research units. Three of these divisions, Public Health Medicine, Occupational Medicine and Family Medicine have a clinical service responsibility through joint appointments with Western Cape Government Department of Health (Directorate of Health Impact Assessment, Groote Schuur Hospital Occupational Medicine Clinic, Chief Directorate Metro District Health Services) respectively.

Teaching

The School runs a large postgraduate programme, including 7 postgraduate diplomas, 6 Master’s programmes, 3 professional Master’s programmes and a PhD programme. In 2013, there were 364 postgraduate students in the School including 29 PhD students. A total of 102 postgraduate students graduated in 2013, including 5 PhDs, 41 Master’s and 56 postgraduate diploma students (one third of all faculty diplomas awarded). The Master’s in Public Health (MPH) is the School’s flagship public health programme and the largest taught master’s in the faculty, with 200 students having graduated over the past decade.

The MPH continues to attract widespread interest from potential applicants, particularly from other African countries. There were 226 applicants for 50 places, of which 52 were accepted and took up places for study in 2013. A record number of 30 students (from 26 in 2012) graduated during 2013 out of a total registration of 156 students pursuing this 3 year degree. With appropriate resourcing, there is scope for an increased intake and increased throughput on this flagship programme. As the only Master’s programme in palliative medicine in Africa, the MPhil in Palliative Medicine continues to attract students from South Africa and other countries in Africa.

The School is also playing an increasing role in the new undergraduate medical curriculum with the aim of producing medical professionals able to function effectively at the primary care level and imbued with an understanding of public health. Public Health and Health Promotion training to undergraduates take place in community-based settings and has been instrumental in pioneering community-placements for MBChB students at UCT. A number of initiatives are underway to develop off-campus teaching sites linked to Community Health Centres and district hospitals. The Family Medicine division has been closely involved in developing and supporting the rural teaching venue in Vredenburg.

Research – overview

There are four URC-accredited research entities within the School: Centre for Infectious Disease Epidemiology & Research (CIDER), Centre for Occupational and Environmental Health Research (COEHR), Health Economics Unit (HEU) and the Women’s Health Research Unit (WHRU). Research outputs in 2013 included approximately 185 peer-reviewed journal publications (a 3% increase from 2012) and 12 book chapters. Total research grant and contract income to the School was R46 882 032 in 2013, a 20% increase from 2012 research income.

Furthermore, in addition to subsidy-attracting publications, academic staff participate in a range of provincial, national and international policy and produce a number of technical and policy papers. These contributions do not always find their way into peer-reviewed scientific journals, but which are integral to the department’s service mission, reflecting the School’s strong social responsiveness profile in applying research and scholarly activity as part of advocacy to promote the public’s health.

The School’s research mission is reflected in the wide range of research activities and the associated research outputs are notable for their multidisciplinary perspective. In infectious diseases and women’s health, publications cover childhood and adult tuberculosis prevention, diagnosis and treatment; HIV epidemiology, transmission and treatment (including treatment outcomes, adherence and mortality); adolescent risk-taking behaviour and educational interventions; prevention of mother-to-child transmission of HIV infection; contraceptive services and women’s reproductive health more broadly; economic analyses of tuberculosis and HIV services; HPV vaccination and cervical cancer prevention and health systems aspects of care related to TB and HIV. The integration of human rights considerations into public health policy and health systems practice receives attention in a number of publications. The department continues its role as...
a national leader in occupational and environmental health research with investigations into occupational allergy, pesticides, hazardous metals and lung disease due to mineral dust. Finally, the question of equity of resource allocation in health, and particularly in primary health care, continues to occupy researchers in health economics, who remain the leading South African source of peer-reviewed publications in this field.

The School has eight NRF-rated researchers, including Dr Chris Colvin (Promising Young Researcher), A/Prof Aqiel Dalvie (Established Researcher), Dr Richard Matzopolous (Established Researcher), Professor Jonny Myers (Internationally Acclaimed Researcher), Professor Lucy Gilson (Internationally Acclaimed Researcher), Professor Mohamed Jeebhay (Internationally Acclaimed Researcher), Professor Leslie London (Internationally Acclaimed Researcher) and Professor Di McIntyre (Internationally Acclaimed Researcher).

In 2013, Dr Mary-Ann Davies in CIDER received the Bronte Stewart Memorial Research Award for the best PhD in the Faculty. The School also made its third award of the David Bourne prize for the best student in the MPH programme to Monika Kamkuenah. The prize commemorates David Bourne, a demographer in the School who died in 2009, and whose death left a huge gap in the HIV research world. Keren Middelkoop was awarded the Ethne Jacka prize for the top MPH dissertation by a graduating candidate in 2012. John Ataguba received the Young Investigator Award for the best publication in the Faculty (2012) as well as the Claude Leon Merit Award for Young Lecturers. Two staff members, Associate Professor Landon Myer and Dr Chris Colvin, were among the recipients of the Top Soft-funded Academic and Research Staff (SFARS) Awards in the Faculty.

**Centre for Occupational and Environmental Health Research (COEHR)**

The Centre’s aim is to be a principal centre of OEH research, teaching and training, occupational medical clinical services, policy advisory, technical consultancy services, advocacy and a source of supportive outreach activities in South Africa, in the Southern and Eastern regions of Africa, Africa more generally, and internationally.

The major objectives of the Centre are firstly, to conduct multidisciplinary research, teaching and service provision of high priority in Southern Africa, integrating laboratory, clinical, epidemiological and policy skills. Another key objective is to explore and develop means of maintaining the health of workers and environmentally exposed communities. A third objective is to conduct policy research into issues ranging from toxic or injurious exposures through to health surveillance. Fostering inter-institutional research, teaching and service (including outreach) collaboration and capacity development constitutes another major objective. Finally, another aim is to foster local and global networks for occupational and environmental health promotion through collaboration with United Nations and other agencies.

**Key research projects**

Key research areas for the Centre currently include the identification of risk factors and evaluating preventive approaches for allergens and asthma in the workplace, health hazards of chemicals (such as pesticides and endocrine disruptors) and silicosis elimination in gold miners.

Workforces that are of particular relevance for the Centre’s work include health care workers, with a specific focus on studying the determinants of TB infection and diagnostic approaches in order to prevent the spread of TB related to the HIV epidemic. Other vulnerable groups include agricultural workers (for whom injuries and pesticide-related asthma and neurotoxicity are a problem) and mine workers (at high risk of developing pneumoconioses and TB).

Environmental risks for workers and communities exposed to metals, such as manganese and arsenic, and other chemicals in the working and residential environments are assessed and monitored. Climate change and its impact on occupational and general health has become a focus linked to the UCT African Climate and Development Initiative.

These areas are supplemented by a broader focus on research to address occupational and environmental health systems and worker’s compensation, to promote ethical issues in occupational health practice as well as developing programmes to build OHS capacity through research and training in the SADC region, through the Fogarty International Centre Millennium Promise Programme (MPP) for non-communicable chronic lung diseases.

The Centre commenced a project analysing the approximately 9 million records of mining contracts over the last 40 years from an anonymised database provided by the main recruiting company in the South African mining industry. The study has a number of objectives, viz. to map the changing distribution of recruitment, particularly from gold mines, to estimate actuarially mortality rates and the number of living miners, and to project the number of living miners with silicosis, tuberculosis and HIV infection. The ultimate goal is to inform activities directed at silicosis elimination, control of tuberculosis and the just compensation of miners with occupational lung disease on the subcontinent.
The work of the Centre led by Prof Jonny Myers has played a major role in contributing towards a safer occupational exposure limit for manganese exposed workers through its contribution to the American Conference for Government Industrial Hygienists Threshold Limit Values (TLV).

Roslynn Baatjies doctoral study on baker’s allergy and asthma demonstrated the substantial positive impact of targeted interventions in reducing flour dust allergens in bakeries, thereby contributing towards preventative strategies for protecting baker’s lung health. The findings will be used recommendations to the Department of Labour to revise the current flour dust exposure standard in South Africa, bringing it in line with international best practice.

The Centre received two grants from the International Development Research Centre to evaluate the effectiveness of upstream interventions including urban upgrading and alcohol trading restrictions in reducing violence in selected low-income community in the Western Cape with high rates of violence. Violence Prevention through Urban Upgrading (VPUU) are the primary implementation partners and key proponents of participatory approaches to community development.

The Health Risk Management Programme (HRMP) has begun to conduct research in the area of climate change and climate variability impacts on health and chemical exposure risks. Research in 2013 continued to also focus on the silent public and environmental health problem of informal vendors selling agricultural pesticides for domestic use in low-socio economic communities of street pesticides and child poisonings; occupational herbicide exposures of community workers removing alien vegetation in the Working for Water programme; and developing health interventions for low literate populations. These research projects involved engagement with NGOs, community leaders/members, national, provincial and municipal government departments (health, agriculture and environment) and research institutions (i.e., MRC, CSIR).

Capacity building has also included dissemination of research findings to decision makers and lay populations. Mechanisms for capacity building by the HRMP are through a Post Graduate Diploma in Pesticide Risk Management (DPRM) targeted at regulators and inspectors; information dissemination through UCT’s pesticide electronic list servers, a bi-monthly online chat discussion forum - virtual seminar - for students and global experts in the field of pesticides and health. The HRMP also develops a range of risk communication materials and health interventions, algorithm, and policy briefs based on research findings. These mediums are used in order to disseminate and translate research findings for a broad range of stakeholders and continue to be widely distributed in printed form and as Creative Commons licensed electronic material posted on UCTs OpenContent UCT site. The programme also conducts policy analysis and inputs to national, regional and international policies on chemical risk management and environmental health.

Major highlights for 2013 included the following:

- The Centre successfully underwent the 5 year URC Quality Assurance review, which commended the work of the Centre as being highly productive, generating high quality output with an international reputation.
- The Centre hosted the 12th International Symposium of Neurobehavioural Methods and Effects in Occupational and Environmental Health in Cape Town in March 2013 under the auspices of the Scientific Committee for Neurotoxicology and Psychophysiology of the International Congress on Occupational Health (ICOH). The conference was co-chaired by Emeritus Professor Jonny Myers and Professor Leslie London, who have been asked to co-guest edit a special edition of Neurotoxicology for papers presented at the Symposium. Associate Professors Aqiel Dalvie and Andrea were members of the Scientific Organizing Committee.
- Professor London was also appointed guest editor for a special edition of the journal New Solutions to focus on the Extractive Industries.
- Professor Leslie London was also awarded a Fulbright Senior Research Fellowship to spend a sabbatical in the Department of Environmental Health at Boston University School of Public Health in the latter part of 2013.
- Professor Rodney Ehrlich spent three weeks at the Yale University Law School and School of Public Health as a Gruber Fellow in Global Health and Justice. One of the outcomes was a postgraduate student project entitled “Fulfilling Broken Promises. Reforming the Century-Old Compensation System for Occupational Lung Disease in the South African Mining Sector”.
- Professor Ehrlich was confirmed as Head of the newly formed Division of Occupational Medicine in the School and Prof Jeebhay as Head of the Occupational and Environmental Health Division.
- Associate Professor Hanna-Andrea Rother was promoted ad hominem to Associate Professor. She was appointed Deputy Director of the Centre for the period of 2013-2015.
- Associate Professor Rother chaired a UN advisory group’s 7th FAO/WHO Joint Meeting on Pesticide Management of which she is a WHO nominated panel member.
- A/Prof Rother is a member of the Scientific Organizing Committee for the 2014 World Universities Network Conference on Climate
of Labour’s refusal to provide the families of workers killed in the 2009 Paarl Print fire access to the DoL Section 32 Formal Enquiry report. Numsa is acting as financial guarantor should IHRG lose the case and be ordered to pay costs. This legal action follows IHRG’s unsuccessful efforts to secure access to the report from the DoL under the Promotion of Access to Information Act.

In the course of 2013 IHRG ran a series of workshops for shop stewards and trade unionists on occupational injury and disease case management. This training seeks to develop capacity amongst union organisers and workplace representatives to investigate incidents in the workplace, manage compensation claims, and represent workers in incapacity dismissal cases. Alongside this training activity, IHRG published a revised version of its handbook on COIDA and Case Management. The publication is being piloted in training courses and has been circulated for comment to a reference group that includes representatives from COSATU, NUM, NUMSA, SAMWU and Solidarity, occupational medicine specialists from the University of Cape Town, as well as Dr. Sophia Kisting, former Director of the ILO HIV/AIDS Program.

IHRG also plays an advocacy role within a national, regional and global context of deregulation, outsourcing and casualisation of labour - trends which enable public and private sector employers to shed responsibility for workplace health and safety. In this regard, IHRG is collaborating with the Federatie Nederlandse Vakbeweging and its South African partners in a campaign for decent work that is directed particularly at vulnerable workers. Our current work with vulnerable workers includes: Nine workshops in collaboration with Naledi and Satawu during 2013 with shop stewards from contract cleaning, security and aviation companies at OR Tambo International Airport; weekly meetings with a group of 20 Community Health Care Workers in Delft; and health and safety workshops with farmworkers organised by Sikhula Sonke.

In November 2013 IHRG convened an indaba for 27 shop stewards and organisers from Numsa who have been participating in a three year Strengthening Workers Rights programme funded by the German union confederation, DGB-BW. The purpose of the programme is to build the capacity of the shop stewards to engage with German multi-national companies in the negotiation of workplace level agreements. The participants on the programme represent workers at 11 German multinational companies in the Eastern Cape, Gauteng, Mpumalanga and KwaZulu-Natal. During 2013 IHRG, Samwu and DGB-BW negotiated an agreement for a health and safety training and organisational development programme for the period 2014 to 2016.
IHRG provided health and safety training workshops in response to requests from Nehawu and Chevron petrochemical refinery.

IHRG collaborates locally, nationally, regionally and globally with other labour service organisations, non-governmental organisations, adult educationists, occupational health experts, various academic programmes, and health research institutions. During 2013, IHRG collaborated with - amongst others – Federatie Nederlandsche Beweging, Deutscher Gewerkschaftsbund, Naledi, Ditsela, Workers World Media Productions, Legal Resources Centre, Labour and Enterprise Policy Research Group and the Department of Occupational and Environmental Health at UKZN. In August 2013 IHRG programmes underwent an external evaluation by FNV and by DGB-BW.

Research activity of IHRG contributes towards the production and distribution of a variety of popular and accessible resources (including posters, newsletters, research reports, workshop materials, and handbooks) for trade unions and their members on issues of occupational health and safety. During 2013 IHRG produced a guide for shop stewards on compensation COIDA and Case Management, a housing audit tool for farmworkers, Afrikaans translations of eight health and safety training modules, an article on the class action lawsuit for gold mine workers with silicosis, a DVD about three contract workers injured in a fire at the Engen refinery in Cape Town and another DVD on the working conditions of Community Health Care Workers in Delft, Cape Town. IHRG further developed its website www.ihrg@org.za by setting up a mobi version for cell-phone access and establishing a discussion forum on compensation.

Centre for Infectious Disease Epidemiology and Research (CIDER)

The Centre for Infectious Disease Epidemiology and Research (CIDER) is a multi-disciplinary research group with the following objectives:

- To conduct public health research integrating laboratory, clinical, epidemiological, social science and health systems research into infectious diseases that have high priority in Southern Africa (in particular HIV, tuberculosis and sexually transmitted infections) in order to improve the prevention and management of these diseases.
- To be a service-led research entity, maintaining very strong links with health services at all levels, and to assist policy makers, programme and services managers with the implementation of the results of research.
- To be a centre of expertise in the surveillance and monitoring of infectious diseases and infectious disease programmes and services, and in the conduct of robust observational research based on routine data sources.
- To provide postgraduate teaching and supervision in epidemiology.

The Centre has a strong track record in research strategies for HIV prevention. Historically the Centre ran field sites for two large multicentre HIV prevention trials, one for a candidate vaginal microbicide, and the other testing the efficacy of twice daily acyclovir suppressive therapy in preventing HIV transmission among heterosexual HIV-discordant couples in which the HIV-infected partner is Herpes Simplex Virus-2 seropositive. Furthering the focus on HIV prevention the Centre is developing tools and indicators for measuring and evaluating PMTCT programmes in resource limited settings, and is testing novel service strategies for further improving the effectiveness of PMTCT interventions.

A further focus of the work of the Centre is in the area of treatment and service delivery for HIV and tuberculosis. This encompasses an expanding portfolio of health systems research as well as the clinical epidemiology of treatment interventions in individual cohorts. Health system projects have focussed on the use of lay health workers and community-based care, and the integration of TB and HIV services in the Western Cape, Free State and Gauteng. A major strength of the Centre is cohort studies of patients receiving antiretroviral therapy. This includes work with individual cohorts in Khayelitsha and Gugulethu, through to running an NIH-funded data centre for collaborative cohort research combining data from 14 cohorts in South Africa.

The Centre has an excellent working relationship with the Provincial Department of Health, with staff supporting the conduct and analysis of the annual antenatal HIV seroprevalence survey, the development and maintenance of information systems to monitor HIV programmes, and assistance with infectious disease surveillance and outbreak investigations. The work on context-appropriate information systems for HIV programmes has led to further collaborations nationally, regionally and with the World Health Organization.

The Centre has a strong multidisciplinary team of PhD scientists and continues to be a significant resource for epidemiology, biostatistics, infectious disease modelling and qualitative research support within the Faculty. There are active collaborations with a range of clinical and laboratory departments, including with the Departments of Psychiatry and Mental Health, Virology, Obstetrics and Gynaecology, Child and Adolescent Health, and Medicine.
The major highlights for 2013 include:

A number of staff were promoted during the year or took on new senior appointments

• Associate Professor Landon Myer was appointed as the head of the new Division of Epidemiology and Biostatistics and as Deputy Director of CIDER
• Dr Chris Colvin was appointed as the head of the new Division of Social and Behavioural Sciences
• Dr Kathryn Stinson was promoted ad hominem to Senior Research Officer

CIDER was successful with the following new grants

• 2 NIH supplements were awarded to the International Epidemiologic Databases to Evaluate AIDS (ieDEA) grant – one to the transfer of children on HIV treatment and one on the impact of HIV treatment (Davies) on adult mortality in South Africa (Johnson).
• Dr Mary-Ann Davies led a successful global consortium that was awarded a grant from the International AIDS Society to develop a global paediatric HIV treatment cohort collaboration (CIPHER)
• Collaborative Initiative for Paediatric HIV Education and Research)
• Dr Chris Colvin was awarded an NIH training grant in HIV Social Sciences together with colleagues at Brown University

The following staff were successful with their post-graduate studies:

• Master’s Degrees: Phuelele Trasada, Monika Kamkuemah, Leatitia Kampilire (MPH); Lucy Campbell (MSc Statistics)
• Dr Mary-Ann Davies was awarded her PhD, and was awarded the Bronte Stewart Memorial Research Award for the best PhD in the Faculty of Health Sciences.
• Dr Lele Rangaka, awarded her PhD in 2012 by the London School of Hygiene and Tropical Medicine, was awarded in 2013 the Woodruff medal for the PhD most likely to impact health in developing countries.

CIDER had another productive year in terms of publication output, with staff being authors on over 80 peer reviewed articles, many in leading general medical journals and lead by CIDER staff.

Health Economics Unit

The Health Economics Unit (HEU) conducts research in health economics and health system issues. The HEU maintains a balance between conceptual and applied research as well as between topics of local and international relevance and focuses on three thematic areas of research, namely health systems and health equity research; health financing and the economic evaluation of disease-priority areas.

There are currently a number of projects relating to issues of health financing and the achievement of universal coverage. In addition to this research work, the HEU is active in knowledge translation through the provision of input into the Ministerial Advisory Committee on National Health Insurance and its various sub-committees in South Africa. Other key policy work includes participation in the Economics and Financing Group for the government’s new “National Strategic Plan for HIV and AIDS, STIs and TB” and the provision of scientific advice to the World Health Organisation to look at health economics issues related to vaccines in low- and middle-income countries.

A five-year research project (UNITAS – Universal coverage in Tanzania and South Africa: Monitoring and evaluating progress) continued in 2013. The UNITAS project focuses on monitoring and evaluating policy formulation and implementation processes aimed at achieving universal health coverage in South Africa and Tanzania. The project undertakes monitoring mainly at the district level, with some monitoring and evaluation at the national level. It aims to support implementation processes and will establish an ‘early warning system’ of implementation difficulties. It is a collaborative, EU-funded project with 2 other South African institutions, a Tanzanian institution and 2 European institutions.

The Global Network for Health Equity (GHNE) continued in 2013 and will enable comparative and collaborative work across three continents to advance equitable universal health coverage. It draws on 3 existing networks: EQUITAP (Equity in Asia-Pacific Health systems, an Asia-Pacific Research Partnership); LANET (The Latin American and Caribbean Research Network on Financial Protection and Health Observatory); SHIELD (Strategies for Health Insurance for Equity in Less Developed Countries, an African network that the HEU co-ordinates). It is funded by the IDRC.

The DST/National Research Foundation South African Research Chairholder in Health and Wealth focuses on the inter-play of health and wealth in the South African context and the impact of a range of government policies on health. Researchers contextualised the social determinants of health within an African context to increase awareness about this issue and to take into account health equity issues to address the root causes of socioeconomic health inequalities. In 2013, the HEU started compiling existing global and domestic evidence on social determinants of health (broadly defined)
both at disease specific level and for health in general. Specific disease conditions that we are exploring at the moment include malnutrition in children, obesity, diabetes, hypertension and mental health. Based on this synthesised evidence and the broad WHO framework for SDH, the HEU is developing a conceptual framework for more fully understanding the causal pathways and mechanisms through which SDH operate within the South African context. The ultimate goal is to inform domestic policy actions that can address key social determinants (e.g. through macro-economic and social policies) and improve population health status. Another key area of research relates to providing a strong evidence base to contribute to current policy debates on health care financing reform.

The XTEND and XPHACTOR studies continued in 2013. The XTEND evaluates the impact and cost-effectiveness of Xpert MTB/RIF in the investigation of TB, and its impact on patient and programme outcomes and transmission at a population level, and thus informs policy on the scale up of Xpert MTB/RIF in low- and middle-income countries. The XPHACTOR project focuses on the Xpert MTB/RIF for people attending HIV clinics. It will identify an evidence-based algorithm, which is feasible to implement within HIV clinics, to guide the utilisation of TB investigations. The results will complement the XTEND study, and provide evidence to guide the rational use of Xpert MTB/RIF in national roll-out in South Africa and other settings where HIV and TB are both prevalent. The projects run until end of 2014, and the HEU is partnering with the London School of Hygiene and Tropical Medicine, the Aurum Institute, the World Health Organisation, and the National Health Laboratory Services. The Gates Foundation is funding this project.

The HEU also worked on a number of short-term research projects in 2013. A cost analysis of a decentralized drug-resistant TB management model developed by Medicines Sans Frontieres was conducted in partnership with the City of Cape Town and the Provincial Government of the Western Cape. Another study that was initiated and completed in 2013 explored the cost-effectiveness of adding the MVA85A vaccine to the BCG vaccine in children from the perspective of the South African government. The recently published results of the Phase Ib clinical trial conducted in Worcester, South Africa, showed the efficacy of the MVA85A vaccine in preventing TB in infants to be 17.3%. Therefore, the vaccine can be considered ineffective. This has a noticeable effect on the outcomes of the cost-effectiveness analysis. However, a Markov model that we developed for this vaccine could also be used to determine the cost-effectiveness of other new TB vaccines being tested in infants. In addition, the model could, potentially, be adapted to reflect the different populations that the efficacy of MVA85A continues to be tested in (e.g. HIV-positive adults). Another study, called Safe Generations, which explores the cost-effectiveness of Option B+ approach to antiretroviral therapy for HIV positive pregnant women in Swaziland was initiated in 2013. Lastly, an implementing and scaling up a community health policy in Kenya project focuses on community health policy in Kenya; the HEU is working with Japanese Aid and the Kenyan Ministry of Health to analyse issues related to implementing a health promotion programme with Community Health Workers. The project will run until the end of January 2014.

Resilient and Responsive Health Systems (RESYST) is a consortium that is undertaking health policy and systems research (with a focus on financing, health workers and governance) in a set of African and Asian settings, including India, Kenya, Nigeria, South Africa, Thailand, Tanzania and Vietnam. Funded by DfID, the consortium began in 2011 and will run until 2016.

Coordination work for EQUINET (Regional Network for Equity in Health in East and Southern Africa) continued in 2013 around equitable financing of health systems and equitable allocation of health care resources in a range of East and Southern African countries.

During this year, Dr John Ataguba was promoted to Senior Lecturer.

Women’s Health Research Unit (WHRU)

The WHRU enjoys local, national and international research standing especially in the areas of sexual and reproductive health and gender issues. The Unit is involved in research, teaching, technical health service support, and advocacy in the area of women’s health. It is made up of a multidisciplinary team of researchers with expertise in public health, epidemiology, sociology and anthropology. The Unit’s focus on women’s health and on gender and health is aligned with local and global challenges in addressing the health needs of women.

The Unit’s research focus can be summarised into three thematic areas: Socio- behavioural research; health services operational research and quantitative/ epidemiological research.

The major highlights for 2013 include:

- A wide range of research collaborators and other visitors visited the Unit and included, Dr Grossman and Kelly Blanchard from Ibis Reproductive Health, USA, Yi-Ling Tan from Gynuity Health Projects and Mary Fjerstad Director of Woman Health Global.
- The Unit also continued to host a study abroad programme from New York University in collaboration with Professor Sally Guttmacher,
• Unit members received numerous awards and honours with Dr Jane Harries, the director of the Unit, being promoted Ad hominem to Associate Professor in the School of Public Health and Family Medicine.

• Associate Professor Jennifer Moodley was appointed as a member of the Ministerial Advisory Committee on Cancer Prevention and Control and was also appointed as Director of Cancer Research in the Faculty of Health Sciences, UCT.

• The Unit continued with its interdisciplinary and translational research collaborations in Africa and hosted the Africa Knowledge workshop supported by the UCT Research Office with collaborators from the University of Namibia, University of Lesotho, Eduardo Mondlane University, Mozambique and University of Botswana.

• The Unit co-hosted and taught on the Men Engage Africa Training course with Sonke Gender Justice and on the Stanford University Bing Overseas Study Program: Public and Community Health in Sub-Saharan Africa.

• Unit members continue to attend and disseminate research at invited International Meetings including at WHO Headquarters Geneva, University of California San Francisco, 2nd International Congress on Women’s Health and Unsafe Abortion, Bangkok and AIDS impact Conference in Barcelona.

• Associate Professor Diane Cooper was an invited expert member of a Harvard University-USAID Maternal Health and HIV task team developing a global research agenda for priorities in HIV/AIDS and maternal health in African countries.

Health Policy and Systems Division

The Health Policy and Systems Programme in the HPS Division encompasses a range of activities aiming to build this area of work through research, teaching, and networking within and outside the SOPHFM. The particular focus of our work is health policy analysis and health systems research.

In 2013, work continued under the umbrella of the Consortium for Health Policy and Systems Analysis (CHEPSAA) an 11-partner consortium funded by the European Commission (see www.hpsa-africa.org). This work built on the initial assets and needs assessment of health policy and systems research in UCT and South Africa – for example, by developing teaching curriculae for relevant courses, and supporting skills development of staff. We have also continued to engage with other colleagues working on HPSR issues in the Western Cape and nationally. We also hosted the first workshop of the CHEPSAA Emerging Leaders programme for 27 emerging HPS researchers from across Africa, to think about the leadership capabilities needed in this field. The Emerging Leaders programme was co-funded by the Rockefeller Foundation.

Continued implementation of work within the District Innovation, Action and Learning for Health Systems development (DIALHS) project, funded by the Atlantic Philanthropies. This project is being implemented in collaboration with the SOPH at the University of the Western Cape, and colleagues from the Western Cape health department and City of Cape Town, within the Mitchell’s Plain sub-district of the Metro District Health System. In 2013 we continued to: work at local level bringing together a range of local actors from local communities and different government sectors better to understand the locally available health assets and needs, and more specifically engage with Environmental Health Care practitioners; as well as engage with and support primary health care facility managers and sub-district managers. We also organized a special session at the South African Public Health Association Conference to discuss this work, led by our managerial colleagues, published a chapter in the annual South African Health Review and have prepared and submitted a set of papers for consideration by international journals. Our work is now being carried forward by similar learning site initiatives, which have drawn lessons from DIALHS, in Gauteng and Kenya (funded by the RESYST consortium, see below).

The Collaboration for Health Systems Analysis and Innovation (CHESAI) was initiated during 2012. CHESAI is a collaborative of health policy and systems researchers based in the Western Cape, South Africa—with a focus on strengthening the health policy and systems research field through conceptual and methodological development, as well as interdisciplinary and multi-sectoral engagement. The main partners are The University of Cape Town and the University of the Western Cape, Schools of Public Health — supported by a grant from the International Development Research Centre, Canada. In 2013 we engaged in a range of reflective activities to share our experience, develop ideas and infer our ongoing research. These included welcoming two practitioner sabbaticants (from the Gauteng and Eastern Cape Departments of Health) to take time out of their work lives to look afresh at a key challenge in their workplace and how to address it, and also welcoming Prof Irene Ageypong from the Ghana School of Public Health to spend time with us.
and share her experience and work. Irene travelled with two of her PhD students, with whom we were also able to share and learn. Finally, we established a regular reflective meeting to draw together HPS researches and practitioners in Cape Town, to think together about the nature and challenges of health system development.

In 2013 we initiated work on a new project, funded by the Doris Dukes Charitable Foundation, called Implementing large-scale health system strengthening interventions: experience from the DDCF’s African Health Initiative. In this project we will closely with colleagues in Mozambique and Zambia to add a qualitative and process evaluation of the health systems strengthening interventions, focussed on health planning and management and primary level quality of care, respectively, they have introduced.

The International Religious Health Assets Programme (IRHAP), formerly based in UCT’s Faculty of Humanities has settled into the SOPHFM. International collaborative work continues, including writing and research projects. Several empirical research projects under the IRHAP banner continued in 2013. These included a three-country evaluative case study in Cameroon, Ghana and Malawi of Catholic maternal health service provision and systems interventions – funded by CORDAID. Also completed was the first stage of research on the Health System Strengthening through Strategic Partnership (HESP) Project for the Hospice and Palliative Care Association of South Africa (HPCA) – an evaluation of civil society driven health committees in 32 sites in South Africa. Several small international ‘think-tank’ meetings were convened by IRHAP in 2013 and early 2014, with a focus on issues such as community systems strengthening and governance of faith-based health institutions.

The HPSP also works with HEU within the RESYST consortium, a UK DfID funded international health systems research consortium (HPSP leads the governance work of RESYST); and in the UNITAS project.

Resilient and Responsive Health Systems (RESYST) is a Consortium that is undertaking health policy and systems research (with a focus on financing, health workers and governance) in a set of African and Asian settings, including India, Kenya, Nigeria, South Africa, Thailand, Tanzania and Vietnam. Funded by DfID, the consortium began in 2011 and will run until 2016. The Health Policy and Systems Division has a particular focus on the governance agenda within the RESYST programme of work. The UNITAS project focuses on monitoring and evaluating policy formulation and implementation processes aimed at achieving universal health coverage in South Africa and Tanzania. The project undertakes monitoring mainly at the district level, with some monitoring and evaluation at the national level. It aims to support implementation processes and will establish an ‘early warning system’ of implementation difficulties. The project runs from 2011 to 2015 and is funded by the European Union. It is a collaborative project with partners from the London School of Hygiene and Tropical Medicine, Ifakara Health Institute (in Tanzania), Institute of Tropical Medicine Antwerp (in Belgium), Centre for Health Policy, University of Witwatersrand and the Africa Centre in South Africa.

Public Health Medicine Division

The Health and Human Rights Programme in the PHM Division undertakes a range of teaching, research and advocacy aimed at helping to build a culture of human rights in South Africa. Its work extends into East and Southern Africa. Research areas include the role of civil society organisations (CSOs) in the realisation of the right to health, community participation in the right to health, the rights of the Deaf in the health care system and how health care providers can be involved in the realisation of the right to health.

The Learning Network for Health & Human Rights (LN) with 5 Western Cape CSOs in partnership with Universities of Maastricht, Warwick and Western Cape continues to explore models for linking civil society action to health rights and to identify best practice for realising health rights. This network draws on a multidisciplinary team of researchers in partnership with CSOs to develop best practice for realising the right to health. CSOs in the Learning Network have been utilising a toolkit for training on the Right to Health to raise awareness and to empower community members to claim their health rights.

A key part of the programme in 2013 focused on community participation as a strategy for the realisation of the right to health. This work followed the release of the results of a two year research project by the Learning Network in the Cape Town Metropole focusing on the challenges faced by health committees as the formal structures for community participation in health. The project has two large grants for ongoing work with Health Committees to enhance community participation as a vehicle for the realization of the Right to Health. This focuses on the roles of Health Committees in a primary health care led health system. One funder is the European Union which has supported projects that enhance the demand for quality primary health care and this project examines health care users experiences as a focus for unlocking opportunities to access quality health services in the Eastern and Western Cape. An additional grant from the International Development Research Centre in Canada supports work with collaborators in Uganda on governance in the health system, specifically focusing on community participation as a key strategy for the realisation of the right to
health. In these projects we continue our collaboration with researchers from Maastricht University, Warwick University and the University of North Carolina.

Family Medicine Division

The mission of the Division of Family Medicine is to graduate doctors who are able to enter their internship and community service years with the appropriate level of confidence and competence when diagnosing and managing common primary care problems. They are able to function fully in the PHC team, and are able to take the lead in district-based health care, teaching and research in any community setting in South and Southern Africa.

Our postgraduate students enrolled for the M Fam Med, M Med (Fam Med), and M Phil (Pall Med) degrees are all required to complete a research dissertation.

Research highlights for 2013 included the following:

- The Division of Family Medicine partnered with Professor Leslie London in the Public Health Medicine Division and the Learning Network to successfully apply for an EU funded grant for the strengthening of primary health care services in 2012, to the value of around 1 million EURO. Family Medicine has 5 packages in this project to the approximate value of over R5 million over a period of 30 months, viz
  
  (a) Package 17: Extension of undergraduate student language learning into the 5th year of the MBChB curriculum. Two blocks of 5th year students have completed the training and we started our third block from the beginning of the new semester in 2014. We successfully ran an SSM in Languages/Family Medicine for eight students in their second year of study – four in isiXhosa and four in Afrikaans at the Vanguard, Mitchells Plain and Gugulethu CHC’s. The Becoming a Doctor SSM concept was flighted on national television (SABC 2) on the “Doctor’s orders” show in January 2014.

  (b) Package 18: Providing language instruction in isiXhosa and Afrikaans for service personnel at Delft and Kraaifontein CHC’s. Eleven staff members in isiXhosa and six in Afrikaans have successfully completed the course.

  (c) Package 19: PROMS (Patient Related Outcome Measures) being conducted by Palliative Medicine in association with King’s College, London. Ethics approval obtained. Data collected from the research sites and data analysis is underway at present.

  (d) Package 20: PCAT (Primary Care Assessment Tool). Ethics approval obtained and data collection and analysis nearing completion.

  (e) Package 21: Chronic Disease Audit. Ethics approval obtained and data collection underway.

- A/Professor Derek Hellenberg is the PI for packages 17 and 18

- Dr Liz Gwyther is the PI for the IMPAQOT study (Package 19) for the EU grant: Measuring and Improving Outcomes for Patients with Progressive Chronic Disease: a Palliative Care Audit in two Western Cape sites

- Dr Elma De Vries leads the annual audit of chronic diseases of lifestyle for the Western Cape Department of Health. This project has now added a new dimension to the audit tool (that of patient perceptions of the management they receive for chronic diseases at CHC’s which forms part of the EU Grant (Package 21).

- Dr Graham Bresick is the PI for the PCAT study that started in 2011 and was completed in 2012. This study has been extended to include a rural and a few more urban sites and forms part of the EU Grant (Package 20).

- Dr Abdul Isaacs is the PI for the Prescription costs study which was started in 2012 and compared medicine costs for chronic diseases at a few CHC’s in the Metro District. The first article from this study was accepted for publication in the SAfPJ in 2014. The second article relating to this topic has also been submitted for review.

- Professor D A Hellenberg is the PI of a survey initiated in 2009 of the first graduates of the new curriculum (2007) to assess the usefulness of language learning during the BaDr course in the work environment. Surveys and focus group interviews were done annually until end 2013 to record the effects of innovations in the course structure and content on the outcomes. The data is currently being analysed.

- Dr Nazlie Beckett completed a project: “A Qualitative evaluation of UCT medical students’ feedback of the OSCE (Objectively Structured Clinical Examination) at the end of the family medicine clerkship” which has been submitted for publication

- The database of 6th year family medicine student CHC-based projects is continuously updated on our database. The database serves as a useful guide for district management, the family physicians and family medicine registrars at the CHCs when deciding on research priorities and interventions to improve delivery of primary health care services

- Meetings with MDHS senior management and staff continued in 2013, to develop a common research agenda, prioritise key research questions and commission research. Our students and staff have addressed many topics which facility managers felt concerned about.

Division of Medical Physics

Head of Division: Ms Hester Burger

Divisional profile

The Medical Physics Division has been actively working towards reinventing themselves over the last twelve months. Five students enrolled in the newly established BSc(Hons)(Medical Physics) course, and the class achieved a 100% pass-rate with a class average of 68.6%.

In addition, the division was involved in the training of two IAEA fellows from Nigeria, one from Zimbabwe, as well as one medical physics intern who will be completing her training in 2014.

Other activities included:

- PhD students (2)
- MSc student (1 – graduated 2013)
- Medical Physics Honours project supervision (5)
- National and international posters/presentations (9)
- IAEA international workshop hosted (13 lectures and practicals)
- Publications (1 published/1 in press / 1 SA journal report)
- External examiner/moderator (9)
- Examiner (College of Medicine, BSc(Hons)) (6)
- Departmental lectures (18)
- Formal lectures (231)
- Research and development collaboration projects (2)

During the year, staff was also involved in the design, installation and commissioning of new high technology equipment that will allow for future research in modern radiotherapy treatment techniques.

Divisional Profile

Nuclear medicine currently provides a wide spectrum of diagnostic procedures, in-vivo studies and therapy; all pertaining to the use of unsealed sources of radioactivity. Procedures cover the central nervous system, respiratory, cardiac, gastrointestinal, genitourinary, endocrine, lymphatic and skeletal systems. There is access to both SPECT/CT and PET/CT. All procedures are integrated into service provision, training and research. In the department is also an osteodensitometer.

DIVISION OF RADIATION ONCOLOGY

HEAD OF DIVISION - Professor R P Abratt

Divisional Profile

1. The Division of Radiation Oncology provides the following services:
   1.1 Investigation, management and treatment of all forms of malignant disease. This is co-ordinated by 23 multidisciplinary clinics, which meet weekly.
   1.2 Participation in clinical studies, both investigator initiated and as part of co-operative groups.
2. Teaching of undergraduate medical courses and provision of post graduate specialists training courses. Pre and post-diplomate instruction to radiographers and post-diplomate courses to nurses. Full training in Radiobiology from undergraduate to honours, master’s and doctoral level.
3. Provision of a comprehensive clinical radiobiological research facility.

Research Fields and Staff

Permanent Staff

Specialist Staff

PROFESSOR RAYMOND ABRATT
Chief Specialist Radiation Oncology & Head of Division; NRF Rated – Category B

DR JEANETTE PARKES
Senior Specialist Radiation Oncology and Senior Lecturer; Main interests - neurological tumours, paediatric tumours, bones and sarcoma

DR SAMEERA DALVIE
Specialist Radiation Oncology Lung Cancer; Male genito-urinary tract cancer, Ear, nose and throat cancer

DR ZAINAB MOHAMED
Senior Specialist Radiation Oncology and Senior Lecturer; Main interests - Lymphoma, Myeloma, Melanoma, Hodgkin’s Disease

DR BARBARA ROBERTSON
Specialist Radiation Oncology & Lecturer; Main interests - Thyroid, Oesophageal and Gastro-intestinal cancers, stomach, pancreas, liver, unknown primary cancers.

DR LEON VAN WIJK
Senior Specialist Radiation Oncology & Senior Lecturer; Main interests - Gynaecological tumours.

DR JULIE WETTER
Specialist Radiation Oncology and Lecturer; Main interests – skin cancers, melanoma, eye Head and neck.

DR T NAIKER – STARTED 1 NOVEMBER 2013
Specialist Radiation Oncology - Main interests – breast cancer

DR HENRIETTE BURGER
Specialist Radiation Oncology – Main interests – Urology and Oesophagus

Medical Officers

DR CINDY SHEPHERD
Principal Medical Officer Radiation Oncology; Main interests - Lung cancer, Tumours of the thyroid, Male genito-urinary tract cancer.

Scientific Staff

DR ANDRE HENDRIKSE
Senior Medical Natural Scientist & Lecturer; Main interest - Research in Medical Natural Science Radiobiology (research on tumours with experimental animals)

DR ALISTAIR HUNTER
Medical Natural Scientist; Main interest - Research in Medical Natural Science Radiobiology (research on tumours with experimental animals)

Contract Research Staff

DIVISION OF RADIOLOGY

Head of Division: Professor Stephen James Beningfield

Divisional Profile

The Division of Radiology works closely with clinical colleagues and their patients throughout the hospital, both in service and academic capacities. This collaboration involves all major medical, surgical, therapy and women’s health areas, including their subspecialties. The recently acquired multi-slice CT’s are heavily utilised, especially for vascular and thoraco-abdominal problems. Red Cross is making good use of their new MRI and CT scanners. There is now also direct access to PET-CT scanning at Tygerberg. Links to Somerset and GF Jooste Hospitals remain strong, with some teaching activity also at Victoria Hospital. The experience of our post-retirement sessional staff continues to benefit the Division. The impact of the full conversion to digital radiology over the next year has been very positive, with electronic requests and reports almost universal.

All available posts are filled with interest in supernumerary registrar posts from within and outside the country remaining strong.

Research Fields and Staff

PROFESSOR STEPHEN BENINGFIELD
Hepatobiliary, vascular, interventional radiology, computer applications and digital radiology.

DR NAZIR AHMED
Cross-sectional imaging, colorectal imaging.

DR SALLY CANDY
Neuroradiology and Magnetic Resonance Imaging.

DR DILESH CHIBA
Musculoskeletal radiology, cross-sectional imaging, interventional radiology.

DR QONITA SAID-HARTLEY
High resolution computerized tomography and fine needle biopsies, chest radiology.

DR THARBIT HARTLEY
Hepatobiliary, vascular, interventional radiology

DR PAUL SCHOLTZ
Cardiac and vascular radiology

DR ROBERT SEGGE
Ultrasound, computerised tomography and general radiology.

DR TRACY KILBORN
Paediatric radiology.

DR NICOLE WIESELTHALER
Paediatric radiology.

DR E BANDERKER
Paediatric Radiology

Teaching

- Postgraduate
  This major activity continues, with new inputs from the University, Colleges and the HPCSA having significant roles. More structured teaching, regular assessments and revised examination structure plus obligatory theses are now reality. The division has upgraded and complete refurbished into a fully digital radiology unit, with a formal Picture Archival and Communication Systems (PACS) and Radiology Information System (RIS) in place. This is having a major beneficial effect on the manner and quality of postgraduate teaching and supervision, both in radiology and other specialties.
• Undergraduate
Regular weekly structured teaching sessions continue, with the case-based multidisciplinary meetings in various specialties allowing both under- and post-graduate students to see the impact of imaging on clinical-decision making.

Research

There are a number of collaborative and self-initiated projects running, with the recent requirement for a thesis dissertation leading to increased activity. The consequences of digital imaging and newer modalities remain strongly felt, with diversification of interests. These continue to be largely on the basis of combined collaboration and multidisciplinary applied clinical research, together with some basic research that is also being undertaken in MRI and digital mammography. There is a good prospect of a full body 3T MRI being installed soon.

Service

The increase in service load, particularly on the multislice CT’s, is placing an increased demand on reporting time. The PACS and RIS does allow more efficient distribution of the resulting reporting work.

Close interaction with UCT PAH clinical service adds another dimension to the work undertaken.

Social responsiveness

There is ongoing collaboration with a number of the closer satellite hospitals, most notably Mitchells Plain, New Somerset and Victoria, but also II Military Hospital (with significant recent equipment upgrades), as well as with the newly-developed and refurbished regional hospitals such as George, Worcester and Paarl, Khayelitsha and Mitchells Plain, that are likewise converting to digital imaging and PACS.

Publications

These are mostly on the basis of close clinical collaboration and applied research, although some more basic MRI and digital radiography research has also been published.

General

The refashioning of the division into a purely digital system has had a major impact on the manner of our clinical interaction within and outside the division.

Research output

Articles in peer-reviewed journals

Peer-reviewed published conference proceedings

The Division prides itself on maintaining high standards of clinical service, and teaching of both undergraduates and postgraduates. The Division continues to function as a true academic unit, with its members making significant contributions at both local and international meetings, while at the same time maintaining a high research output.

**DIVISION OF OPHTHALMOLOGY**

**Head of Division: Professor C. Cook**

**Divisional Profile**

The Division of Ophthalmology combines an academic hospital service with University teaching, clinical training and research.

Specialist tertiary care clinical services are provided to patients in the Western Cape and beyond.

Teaching is provided to fifth year medical students, and specialist training of both local graduates and graduates from other countries is provided.

A postgraduate diploma course in community eye health and a master’s in public health with a community eye health track is provided for Vision 2020 programme managers working in sub Saharan Africa.

DIVISION OF ORTHOPAEDIC SURGERY

Head of Division: Professor Robert Dunn

Divisional Profile

The Division of Orthopaedic Surgery continued to provide secondary and tertiary Orthopaedic services to the Western Cape and surrounding communities organized in the following sub-units: Trauma, Hands, Acute Spine Injury Unit, Spine Surgery Unit, Upper limb unit, Lower limb unit and Orthopaedic Oncology. This comprehensive service is made possible with the input from enthusiastic sessional staff from private practice, highlighting the benefits of public-private partnerships.

This platform provides an excellent training experience for our 19 registrars, with all 4 senior being successful in their exit exams in this period.

Increasing emphasis has been placed on restoring the large joint arthroplasty throughput. Total hip and knee output has doubled compared to recent history due to reallocation of theatre resource. Current challenges remain the high trauma and infectious pathology case load, necessitating ongoing unacceptable late night surgery on the emergency lists.

DIVISION OF EMERGENCY MEDICINE

Head of Division: Professor LA Wallis

Divisional Profile

Emergency Medicine is run as two academic Divisions (at UCT and SUN) but has a single Head. The Division utilises various academic and satellite hospitals for the purposes of teaching and research; these include: Groote Schuur, Red Cross War Memorial Children’s, Victoria, GF Jooste, Paarl, and New Somerset Hospital. The types of patients seen and emergencies treated vary among hospitals, allowing our MMed students to become fully competent Emergency Medicine specialists.

The Division places an emphasis on post graduate programmes, with 15 PhD students, 5 MSc, and 20 MPhil. In 2013, the Division produced 30 publications in peer-reviewed journals and contributed to 10 book chapters. The Division’s research has been focused in the following areas: emergency care systems, emergency ultrasound, pre-hospital care and disaster medicine, and mHealth.

The Division has 1 Professor, 2 Senior Lecturers, 3 Lecturers, and 1 Research Coordinator between SU and UCT. There are 9 honorary lecturers at SU and an additional 10 honorary lecturers at UCT.

DIVISION OF NEUROSURGERY

2013 saw the fruition of a number of long-term objectives concerning infrastructure and staffing. The establishment of the UCT/GSH Neurosurgery Clinical Hub in the F3 Core Area has transformed our meetings and we were delighted to acknowledge the donors who made it possible, especially the Parker family and the Mauerberger Foundation Fund at an opening ceremony on 22 August 2013. A new Cathlab at UCTPAH enhanced the neurointerventional program and the first fluorescence-guided glioma resection was performed by Dr Sally Rothemeyer.

Members of the Division collaborated with our counterparts in Neurology to run a very successful GP Refresher Course in February and this was matched by the first edition of Continuing Medical Education (March 2013) devoted entirely to neurosurgical topics. Dr Rothemeyer and Dr David Le Feuvre organised the Surgical Research Day and the year ended on a high note on the international front with Professor Anthony Figaji hosting the 4th biennial meeting of the International Society for Intraoperative Neurophysiology (ISIN).

Well-deserved promotions went to Professor Allan Taylor (Head of Clinical Unit), Professor Patrick Semple (Professor) and Dr David Le Feuvre (Associate Professor). This year saw the award of a number of substantial research grants and training fellowships. Dr Tiago Morgado was appointed as the inaugural Neurocritical Care Fellow (funded by Johnson and Johnson) and the Division hosted our first ever postdoctoral student in Dr Nelleke Langerak (UCT Postdoctoral Award) who received a prestigious CIPHER award from the International AIDS Society which will enable her to stay on as a Senior Research Officer. Dr Llewellyn Padayachy received a Harry Crossley Award for his doctoral research, Ursula Rohlwink a CIDRI Wellcome Trust Postdoctoral Award pending completion of her PhD in 2014 and Professor Figaji received a substantial research grant from the Cancer Research Initiative of South Africa (CARISA) and was nominated by the University Selection Committee for the very prestigious SARCHI Chair in Clinical Neuroscience.

We were fortunate to have Dr Nte Mjoli stay on as Chief Registrar while Dr Edwin Mogere passed the FCNeurosurg(SA) exam. Two registrars received major international awards. Dr David Roytowski received the International Abstract Award from the American Association of Neurological Surgeons and was invited to present at the main plenary session, an extraordinary achievement while Dr Mogere received the Professor Ming Chien Kao Scholarship from the World Federation of Neurosurgical Societies and presented his work at the 14th World Congress of Neurosurgery in Seoul, Korea where he also participated in the Pediatric neurosurgery Pre-Congress Course, talking on Management of asymptomatic: chronic subdural haematoma. Dr Rohen Harrichandparsad, a neurosurgeon from Durban, completed training in neuro-intervention and is now running a service at the Inkosi Albert Luthuli Central Hospital. Visiting professors included Dr Abhaya Kulkarni (Hospital for Sick Children, Toronto, Canada) and Dr Mohamed Raji Mahmud (National Hospital Abuja, Nigeria).

We were greatly honoured by the generous establishment of the Estelle Yach Award by the Mauerberger Foundation Fund and this will be used to establish an annual neurosurgical meeting in Cape Town. A great deal of work went into organizing an annual ISPN/ESPN African Paediatric Neurosurgery Course which will kick off in Pretoria in March 2014. Finally, the plans to return the academic department to J Block, co-located with Neurology and Neuropsychology as a Clinical Neurosciences Centre were formally approved by the hospital and submitted to the Provincial Department of Health with a request for support.

Postgraduate students

Dr Padayachy registered for a PhD and Ursula Rohlwink continued with her PhD (Neuroscience) in Neurosurgery, while the number of neurosurgical trainees grew to 11. Registrars included Drs Nte Mjoli, Edwin Mogere, Johan Malan, David Roytowski, Nico Ensini, Mohamed Ben Husein, Ncedile Mankahla, Emmanuel Wegoye with Drs Chris Young and Nqobile Thango as medical officers and Dr Tiago Morgado as the first ever Neurocritical Care Fellow.

Research Grants

Generous grants from the Mauerberger Foundation Fund, the Parker family, the Wellcome Trust, the Medical Research Council of South Africa, the Integra Foundation and Johnson & Johnson (Codman), Baroque Medical, Boston Scientific, Karl Storz and the University of Cape Town (including the Department of Surgery and the Department of Paediatrics and Child Health) are gratefully acknowledged.

DIVISION OF UROLOGY

Head of Division: Associate Professor JM Lazarus

Divisional Profile

The Division of Urology renders a urological service to Groote Schuur Hospital, Red Cross War Memorial Children’s Hospital and Somerset Hospital. An operating list is done once per week at Eerste River Hospital, operating on Groote Schuur Hospital patients.

A Prof John Lazarus is head of Paediatric Urology at Red Cross Hospital and Dr Lisa Kaestner attends Somerset Hospital for ward rounds and outpatients. The operating list at Eerste River Hospital is done by a Senior Registrar assisted by Professor Johan Naudé (ex head of Division of Urology).

Undergraduate teaching is provided to 6th year medical students, who do a two week block in Urology. Postgraduate training is provided to Urology Registrars and also to supernumerary registrars. The members of our division make significant contributions at both local and international meetings. A number of our members have attended instructional courses both locally and overseas. The Division has maintained its productivity despite staff shortages and the financial crisis.

The Division is involved with two combined clinics – Urological Oncology Clinic (with Radiation Oncologists) and Female Continence Clinic (with Gynaecologists). We run a number of other specialised clinics – Adolescent Spinal Defects Clinic, Haematuria Clinic, Stricture Clinic, Erectile Dysfunction Clinic, Reconstructive Urology Clinic and Metabolic Stone Clinic.

DIVISION OF OTOLARYNGOLOGY

Head of Division: Professor Johan Fagan

Divisional Profile

The Division of Otolaryngology combines an academic hospital service with university teaching, training and clinical research. It provides specialist clinical services to patients in the Western Cape and beyond. Its university responsibilities include in-hospital and community-based training of 5th year medical students, teaching of dental and paramedical students, and specialist training of both local graduates and graduates from other countries. An outreach programme supplements the
training of students and primary health care workers in the fundamentals of ear care. We continue to provide specialist training to supernumerary registrars from other African countries, always having 2-3 such trainees on our staff. We recently trained our 8th UCT Karl Storz Fellow in Advanced Head and Neck Surgery from Malawi. Previous fellows are from Senegal, Nigeria, Ghana (2), Kenya, Uganda and Rwanda. All have returned to teaching hospital in their home countries. Our next fellow is from Tanzania. This fellowship training, the only such training in Africa, has made a significant contribution to the quality of head and neck care in Sub-Saharan Africa, and strengthened UCT’s connections with other African countries.

Research outputs

The Division had 7 publications in peer-reviewed journals in 2013. Dr Kate Stephenson (registrar) won the award for the best presentation at the annual UCT Department of Surgery Research Day and at the 2013 National Meeting of the South African Society of Otolaryngology - Head and Neck Surgery. Two registrars (Drs Pedro Monteiro and Gavin Quail) presented their research at the 2013 IFOS World Congress in Seoul, South Korea.

Open Access Textbooks

Prof Fagan edits and publishes two open access textbooks which are hosted on the UCT webserver. Chapters from The Open Access Atlas of Otolaryngology, Head & Neck Operative Surgery have been downloaded >185 000 times, currently at a rate of >500 downloads per day. Chapters from The Open Access Guide to Audiology and Hearing Aids for Otolaryngologists have been downloaded >15 000. Although primarily directed at surgeons in Developing Countries, the biggest users of the textbooks, following India and South Africa, are the USA and the UK. Chapters are authored by international experts. From UCT, Prof Fagan has authored 34 chapters, and Dr Tasheem Harris 10 chapters, and Dr Shazia Peer 1 chapter. The textbooks are reportedly the standard surgical text in some countries.

CHRIS BARNARD DIVISION OF CARDIOTHORACIC SURGERY

Head of Division: Professor Peter Zilla

Divisional Profile

The Division offers the full range of adult and paediatric cardiac and thoracic surgery services, catering to all forms of congenital heart disease, myocardial revascularisation (on- and off-pump), cardiac valvular repair and replacement surgery as well as thoracic aortic surgery. Research will be conducted within the Division’s Cardiovascular Research Unit during 2014 to evaluate an affordable Left Ventricular Assist Device (VAD) for use at Red Cross Children’s Hospital. VADs promise to allow a period of stability and lead to recovery of the heart, or alternatively allow survival until cardiac transplantation in otherwise inoperable cases, for example primary pump failure due to viral infection.
Currently, the use of such a device is prohibitively expensive in a developing world scenario.

The Division’s transcatheter valve programme was officially launched in March 2013. Groote Schuur Hospital has been approved by Department of Health Head Professor Househam as a Centre of Excellence for Transcatheter Aortic-Valve Implantation (TAVI) services for current clinical cases. The development of low cost TAVI solutions appropriate to Subsaharan Africa is currently being conducted by a University of Cape Town startup company (Strait Access Technology) based in the Cardiovascular Research Unit and formed around IP originally developed there. The goals of this company are acutely aimed at collaborative studies together with the medical device industry and other international academic units to produce cost-effective devices which are more readily appropriate to the developing world. Preclinical testing of prototype designs is anticipated in 2014. A second phase of funding has secured another 33 mio Rand for the next two years of this project.

Hybrid minimally invasive/minimum access procedures were also launched in 2013. The envisaged ‘hybrid’ operating theatre for this purpose has been approved and building construction is planned for April 2014. While funding of the C-arm and beds remain an issue, funding has been secured for the construction phase. This facility will not only offer to reduce hospital stays but remove the costs of open heart surgery thereby bringing heart valve treatment closer to the third world where rheumatic disease remains highly prevalent.

**Divisional Profile (Cardiovascular Research Unit)**

Although 2013 continued to remain financially challenging, the Western Cape Heart Research Grouping of the Medical Research Council, of which the Cardiovascular Research Unit is a member, continued to support essential basic research and will continue to do so in 2014. The Unit also relies on National Research Foundation research grants.

A significant breakthrough in our synthetic vascular graft research was achieved in the previous year where spontaneous endothelialization of the luminal surface across an engineered porous graft wall was shown to be independent of trans-anastomotic outgrowth. A confluent endothelial lining in small diameter vascular grafts remains the ‘Holy Grail’ in humans and is essential for long-term patency.

In 2013, the breakthrough results on porous polyurethane grafts were published in an international peer reviewed journal and followed by a successful study to elucidate and differentiate between the two non-trans-anastomotic modes of healing, namely transmural and fallout healing. The former was shown to be the most prevalent and reliable. These findings may be useful for the development of clinical peripheral vascular (including endolumenal) grafts, as transmural endothelialization remains a viable healing mode in humans. Continued work in this field in 2014 will focus on accelerating the healing response.

A collaboration with Gothenburg University in the field of vascular grafts was concluded, with publication of the results anticipated in 2014. Similarly, publication of the initial results on our studies with Clemson University on the use of elastin-derived grafts is imminent, and work continues in a large animal model.

Research continued to focus on a regenerative medicine approach based on remodelling of synthetic engineered hydrogels. A model for assessment of the regenerative capacity of these synthetic hydrogels in the treatment of myocardial infarction has generated further promising results. Therapeutic benefits with respect to cardiac function and scarring were shown for hydrogels carrying growth factor coacervates. Strong preliminary data has been obtained showing both improved engraftment and therapeutic effect of stem cells delivered with the synthetic hydrogel into infarcted hearts. Synthetic ‘smart’ hydrogels were also developed that were shown to control invasion of specific cell types, a finding that has generated considerable international interest in the field of tissue regeneration.

Building on the groundwork laid down in 2012 with respect to porcine pericardial tissue, research evaluating the immune and inflammatory cell responses as well as the potential for mineralisation and resorption of animal tissue used in the construction of ‘bioprosthetic’ transcatheter heart valve designs, in 2013 concentrated on understanding the benefits of tissue decellularisation, the introduction of different covalent ‘cross-links’ and capping alternatives and the use of non-covalent agents when applied to bovine pericardium. A short list of regimens emerging from that research are already undergoing preclinical testing in a circulatory model.

Milestones of the Biomechanical Sciences Group in 2013 included the successful completion of a 3-year project into biomechanics of biomaterial therapies for myocardial infarction funded from the South African Centre for High Performance Computing; the commencement of an interdisciplinary collaborative project aiming at reducing the failure rate of arterio-venous access for haemodialysis in patients with end-stage renal diseases and the graduation of two M.Sc.(Med) students with distinction. The group also extended its activities in the biomechanics of single cells through organization of an international event on cell mechanics and mechanobiology in Cape Town.
with speakers from the UK, Germany, Spain and South Africa that included a meeting with the UK Minister for Science and Universities, Rt. Hon. David Willets.

DIVISION OF PLASTIC SURGERY

Head of Division: Professor DA Hudson

Divisional Profile

The Division of Plastic Surgery combines an academic hospital service, with university teaching, clinical training and research. The division also functions at Red Cross Children’s Hospital and pressures sores are dealt with at Eerste River Hospital. Specialist tertiary services are provided to patients of the Western Cape and beyond.

The Department is actively involved in a number of multidisciplinary which include:
1. head and neck cancer clinic
2. skin cancer clinic
3. melanoma clinic
4. transsexual clinic
5. combined breast clinic

Multidisciplinary clinics at Red Cross Children Hospital include:
1. Cleft lip and palate clinic
2. Inter sex clinic
3. Craniofacial clinic
4. Congenital ear clinic
5. Congenital hand clinic

Teaching is provided to fifth year medical students PAMS, and specialist training of post graduates is undertaken – including supernumerary registrars from other countries. The Department is actively involved in research in all aspects of Plastic Surgery, including paediatric Plastic Surgery.

The Department enjoys a strong partnership with colleagues in private practise. These part time surgeons provide valuable input to the Department both in teaching and in clinical services.

Dr S Adams was an invited guest and chairman at the World Cleft Lip & Palate Congress held in USA.

The Division continued to conduct research in breast reconstruction, complex wounds, paediatric plastic surgery, microsurgery and burns and a number of publications emanated from this.
